

Subject Index

A

Ada, 211
 Amplitude loading, 113
 Analog-to-digital converter, 7
 ASME Boiler and Pressure Vessel Code
 Case N-47, 38
 ASTM
 Standards
 D 1141-75, 124
 D 3039-76(1982), 22
 E 23-88, 88, 89
 E 184-79, 88
 E 399-83, 56, 81
 E 646-78, 195, 200
 E 647-83, 121, 123, 125
 E 647-88, 56, 81, 102, 237, 244
 E 647-88a, 134
 E 813-81, 199, 260
 E 813-87, 56, 153, 156, 260
 E 1049-85, 116
 STP 613, 1
 STP 877, 1
 Automated ball indentation testing, 188
 Automated data acquisition for composite
 materials testing, 21
 Automated digital analysis technique,
 133
 Automated fatigue and fracture laboratory
 schematic, 234
 Automated fatigue crack growth testing,
 113
 Automated materials testing, 52, 178
 Automated test system for fatigue and frac-
 ture testing, 1, 7, 23
 Automated testing, 232
 Automated thermomechanical fatigue test-
 ing, 38
 Automated variable-amplitude, 167
 Automatic test control, 52
 Automation
 computer-controlled systems, 7

data acquisition and control, 269
 electric potential drop, 143
 European high temperature materials
 databank, 250
 high-temperature crack growth, 178
 microprocessor-based controller, 68
 multitasking minicomputer work station,
 52
 PC-based data acquisition, 21
 semiautomated system, 83
 single host computer system, 232
 software, 95, 211
 variable amplitude, 167
 Axial-torsional fatigue, 269

C

Charpy specimens
 test methods, 83
 Clip gage, 7
 Closure, 113
 Complementary metal oxide semiconduc-
 tor, 7
 Compliance, 7, 113, 167
 Composite materials, 21
 Compression tests, 38
 Computer and software technology in ma-
 terials testing systems, 1
 Computer control, 52, 95
 Computer control—automation software,
 211
 Computer control for simulation of me-
 chanical and environmental condi-
 tions, 113
 Computer control program for axial-tor-
 sional fatigue testing, 269
 Computer controlled fatigue testing, 7
 Computer feedback control, 178
 Computer programs, 83
 Computers, fatigue (materials) testing, 7,
 38
 Constant-amplitude loading, 232

Corrosion fatigue, 113
 Control program, axial-torsional fatigue testing, 269
 Crack growth testing
 computer controlled system, 7
 databank, 250
 digital image analysis, 133
 electrical potential drop, 143
 simulation of mechanical and environmental conditions, 113
 single host computer system, 232
 Crack length, 133
 Creep crack growth, 178
 Creep fatigue, 38
 Creep (materials), 250
 Cyclic loading, 188

D

Data acquisition
 automation software, 211
 European high temperature materials databank, 250
 multitasking minicomputer workstation, 52
 PC-based, 21, 23
 Data acquisition for axial-torsional fatigue testing, 269
 Data acquisition—system software, 26
 Database, 211
 dc-potential, 7
 Deformation testing, 38, 211
 Digital image analysis, 133
 Direct measurement, 133
 Dynamic impact testing system, 83

E

Elastic-plastic fracture mechanics, 8, 143
 Electric potential drop, 143, 167
 Elevated temperature fatigue, 38, 133
 Environmental exposure, 113
 European high temperature materials databank, 250

F

Failure, 188, 269
 FALSTAFF, 167
 Fatigue and fracture mechanics databank, 250
 Fatigue behavior of materials—data acquisition, 269

Fatigue crack growth
 automated variable-amplitude, 167
 fracture mechanics test automation system, 95
 measurement using digital analysis, 133
 simulation of mechanical and environmental conditions, 113
 Fatigue data acquisition, 269
 Fatigue life, 113
 Fatigue life prediction models, 269
 Fatigue materials, 52, 250
 Fatigue testing
 automated ball indentation, 188
 automated variable-amplitude, 167
 automation software, 211
 crack growth, 113, 133
 European high temperature materials databank, 250
 fracture mechanics test automation, 95
 high-temperature crack growth, 178
 microprocessor-based controller, 68
 multitasking minicomputer workstation, 52
 PC-based data acquisition, 21
 semiautomated testing system, 83
 single host computer system, 232
 thermomechanical, 38
 Fatigue testing, computer-controlled, 7
 Field apparatus, 188
 Field indentation microprobe apparatus
 for nondestructive testing, 188
 process flow chart, 191
 schematic, 190
 Flow properties, 188
 Fracture mechanics, 95, 250
 Fracture testing
 automated ball indentation, 188
 automated variable-amplitude, 167
 automation software, 211
 axial-torsional fatigue, 269
 computer-controlled, 7
 crack growth, 113, 133
 data acquisition and control, 269
 digital image analysis, 133
 European high temperature materials databank, 250
 fracture mechanics test automation system, 95
 high-temperature crack growth, 178
 microprocessor-based controller, 68
 multitasking minicomputer workstation, 52
 PC-based data acquisition, 21

semiautomated testing system, 83
 single host computer system, 232
 thermomechanical, 38
 Fracture toughness, 52, 188

H

Heat affected zone, 188
 High temperature
 compression tests, 38
 fracture, 178
 tension tests, 38
 High temperature crack growth experiments
 schematic of automated testing system, 180
 High temperature materials databank, 250
 Hysteresis loops, 269

I

Image transmission, 133
 In-phase test, 269
 Intelligent mechanical test controller (IMTC), 68–82
In situ testing, 188
 Interface, 7
 Irradiated materials, 83
 Irradiated steels, 188
 Isothermal deformation tests, 38
 Isothermal fatigue, 211

J

J-integral, 7
J-*R* curve, 7, 143

L

Laboratory fatigue tests, 38

M

Material testing, 250
 Materials behavior research
 automation software, 211
 Materials databank, 250
 Materials testing laboratory
 automation software, 211
 Materials testing systems
 computer and software technology, 1, 7, 95, 178
 Measurement applications
 desk-top computer, 178

Mechanical response of composite materials to loading variety, 21
 Mechanical test language, 68
 Mechanical testing, 95, 143, 188
 Metallic materials
 fracture toughness testing, 188
 Microprocessor-based controller
 for fatigue testing, 68
 schematic, 72
 Multiaxial stress and strain—data acquisition, 269
 Multichannel test controller, 7
 Multiple isothermal deformation tests, 38
 Multitasking, 269
 Multitasking minicomputer workstation
 materials testing laboratory, 211
 schematic, 55
 SUN workstation computer, 52
 versus microcomputer (PC), 53

N

Networking, 211
 Nondestructive testing, 188

O

ORNL (Oak Ridge National Laboratory)
 computer-controlled fatigue and fracture testing systems, 9
 Out-of-phase test, 269

P

Partial unloading, 188
 PASCAL, 211
 Personal computer, 21
 Petten—European high temperature materials databank, 250
 Photo-isolation, 7

R

Radiation-induced embrittlement
 nondestructive testing apparatus, 188
 Real-time control, 52

S

Semiautomated systems
 design, 84
 for dynamic impact testing, 83
 Servohydraulic loadframe, 68
 Single host computer system, 232
 Software development, 269

Software portability, 211
 Software technology
 for automated fatigue and fracture laboratory, 232
 for materials testing laboratory, 211
 Spectrum fatigue testing, 113
 Spectrum loading, 232
 Spherical indenter, 188
 Stainless steel, 38
 Standardization, 250
 Strain-controlled LCF data, 38
 Stress and strain—data acquisition, 269
 System verification, 21

T

Tension tests, 38
 Test automation, 68, 95
 Test controller, 7
 Test equipment, 52
 Testing systems
 computer technology, 1
 schematic diagram, 43

Thermomechanical fatigue, 38, 211
 Thesaurus—European high temperature materials databank, 250
 Toughness testing
 automated system, 7
 using a multitasking minicomputer workstation, 52

U

Uniaxial fatigue, 211

V

Variable amplitude, 167

W

Waveform data acquisition strategies, 211
 Welds, 188

Y

Yield strength, 188
