

## Part III—Thermal Properties of Plastics

von Meysenbug    Stephenson    Willbourn

Merz                      Cox                      Juillard

### About the Authors

C. M. VON MEYSENBURG obtained his doctor's degree in engineering in 1948 at the Darmstadt Institute of Technology (Germany) after several years of research at the Institute of Materials Science of the Darmstadt Institute. He specialized in bearing materials and problems. He is now head of the Plastics Testing Center which he helped to organize at the Darmstadt Institute for Materials Testing. In 1958 he was appointed associate professor on plastics at the Darmstadt Institute.

CHARLES E. STEPHENSON has been engaged in plastics research since 1935 at Imperial Chemical Industries, Ltd., Welwyn Garden City, Hertfordshire, England, and more recently has specialized in the development of physical test methods for both quality control and research.

ANTHONY H. WILLBOURN assistant research manager has been in the Research Department of Imperial Chemical Industries, Ltd., since 1945.

EDMUND H. MERZ was graduated at the University of Michigan (USA) in 1944 with the degree of B.Sc. in chemical engineering. In 1947 after receiving his Ph.D. from the Polytechnic Institute of Brooklyn, he joined the Plastics Division of the Monsanto Chemical Co., where he is presently Group Leader of the Applied Physical Chemistry Research Group.

WILLIAM P. COX is a chemist in the Research Department of the Plastics Division of Monsanto Chemical Company. He received a B.Sc. degree in chemistry from the California Institute of Technology in 1950 and a Ph.D. degree in physical chemistry from the University of California in 1953.

M. JUILLARD did his work for doctor of science degree at the Centre National de la Recherche Scientifique. His subject was formaldehyde resins. Since 1955 he has been in charge of test methods and standardization of plastics at the Research Center of the Compagnie Pechiney, Aubervilliers, France.
