

## Subject Index

## A

Alloy steels, 83, 120, 134, 195  
 Anvils, 7, 35, 67  
 Artificial defects, 7  
 ASTM standards  
   E 23 -- Methods for Notched Bar Impact Testing of Metallic Materials, 7, 67, 94, 195

## B

Bending deformation, 67, 179  
 Broached notches, 83

## C

Clinometer, 20

## D

Ductile-to-brittle transition, 134, 179  
 Dynamic tear, 134

## E

Energy determinations, 7, 35, 54

## F

Finite element analysis, 179  
 Fracture toughness evaluations, 142

## G

Ground notches, 83

## I

Impact tester  
   compliance measurements, 7  
   data accuracy, 54, 94  
   dimensional parameters, 35, 54  
   direct calibrations, 7, 20, 35  
   indirect calibrations, 7, 35  
   loading parameters, 120, 134  
   metrological techniques, 20  
   reference type, 35, 94  
   sensitivity, 7, 142  
   slow bending, 142

International standardization, 20

## K

Kruskal-Wallis test, 142

## L

Lateral expansion, 83, 120

## N

National Standards Institute, 1  
 National Standardization, 20  
 Notch parameters (see also Impact tester)  
   acuity, 134  
   fabrication methods, 83, 94, 142  
   loading, 120, 134  
   microstructural deformation, 83, 179  
   physical characteristics, 83  
 Nuclear reactor testing, 54

## P

Pendulums  
   absorbed energy, 67  
   characteristics, 7, 20  
   description, 1  
   elevation, 20  
   friction loss, 20, 67  
   load system, 7  
   oscillation period, 20  
   rod angle, 20  
   striking edge radius, 67  
 Photomicrographs, 94

## R

Regulatory requirements, 54  
 Research programs, 1  
 Resilience analysis, 35

## S

Scientific evaluations, 54  
 Slip line field theory, 179  
 Specimen parameters  
     absorbed energy, 83, 120, 142  
     bending characteristics, 35, 67  
     conditioning media  
         analysis, 195  
     deformation pattern, 179  
     electronic control systems, 7  
     loading rate, 120, 134  
     materials specification, 20, 142  
     stress rate, 134, 142, 179  
     type, 1  
 Specimen types  
     aluminum, 142  
     fatigue pre-cracked, 120, 134, 142

high energy, 83  
 irradiated, 54, 179  
 low energy, 83  
 steel, 142, 179 (see also  
     Alloy steels)  
 titanium, 142  
 unirradiated, 54  
 v-notched, 83, 120, 134, 195  
 Standardization overview, 1  
 Steel product testing, 54, 83  
 Striker abrasion, 67

## T

Testing techniques, 1  
 Testing temperature  
     parameters, 83, 179  
 Transition temperature  
     variables, 54, 120, 134, 195

## U

Upper shelf energy  
     level, 179
