

## Subject Index

### **A**

Acidification, 299  
 Ammonia, 27  
 Autoclave testing, 239

### **B**

Barriers  
 multiple, design, 165  
 natural, 115  
 Bedrock environment, 224  
 Brass, free machining, 355

### **C**

Carbon dioxide, 268  
 Carbon steel, 27  
 Chemical process industries, 42  
 Chloride, 204, 299  
     sodium, 340  
 Chromium, 367  
 Cladding, 239  
 Coincidence site lattice, 252  
 Concrete service life, 282  
 Constant extension rate testing, 355  
 Containers, nuclear waste, 188  
     damage prediction, 143  
     lifetime prediction, 126,  
         165, 224  
     multi-purpose, 115  
     transuranic, 103  
 Copper, 224  
 Cracking  
     fatigue, growth, 188  
     hydrogen-induced, 126  
     stress corrosion, 27, 188,  
         313, 325, 340  
 Crevice, artificial, 313  
 Crevice corrosion  
     susceptibility, 299  
 Crevice depassivation, 204  
 Crevice repassivation, 126,  
     204, 340

Crystallographic orientation,  
 252

### **D**

Damage accumulation, 165  
 Deformation, residual, 252  
 Degradation rate, 103, 355  
 Distribution parameters, 3

### **E**

Electrochemical methods, 382  
 Electrochemical  
     Potentiokinetic  
     Reactivation, 367  
     impedance spectroscopy, 42  
     potential range, 325  
 Electrode, rotating cylinder, 42  
 Embrittlement, mercury, 355  
 Engineered barrier system, 115  
 Environmental definition, 3

### **F**

Fatigue, corrosion, 188  
 Field simulations, 252  
 Fracture, unstable, 355

### **G**

Galvanic coupling technique, 126  
 Gas facility, 268  
 Graphite-fiber wool, 313

### **H**

Hydrology, 115  
 Hydrolysis, 204

### **I**

Immersion tests, 42  
 Impurity segregation, 252  
 Intergranular corrosion, 367  
 Ion mass spectrometry,  
     secondary, 252

**L**

Lifetime distribution, 313  
Linear model, 65

**M**

Marine atmosphere, 382  
Materials definition, 3  
Materials selection, 165, 268  
Mercury embrittlement, 355  
Metamorphic rocks, 224  
Microstructure, 252  
Mixed Potential Model, 143  
Mode and submode definition, 3  
Modeling  
    composite, 65  
    crack growth, 27  
    crevice, 204  
    deterministic, 143  
    exponential distribution, 313  
    linear, 65  
    mechanistic, 165  
    mixed potential, 143  
    quantitative, 299  
Multipotential test, 325

**N**

Neural networks, artificial, 42  
Nickel-base alloy, 313  
Nuclear waste management, 188,  
    224  
    damage prediction, 143  
    high level, 115  
    low level, 282  
    storage life prediction, 126,  
        165

**O**

Oil facility, 268  
Oxygen diffusion rate, 282

**P**

Penetration data, corrosion, 65  
Pitting, 299  
Plutonic rock repositories, 143  
Polarization scans, 42  
Power model, 65

Precipitations, intermetallic  
    phase, 367  
Probabilistic methods, 27  
Propagation phenomenon, 165

**Q**

Quantitative method, 299

**R**

Radiolysis products, 143  
Rate testing, constant extension,  
    355  
Rating number, 382  
Reactors  
    boiling water, 313, 325  
    pressurized water, 239  
Rebars, 282  
Repassivation, 126, 204, 340  
Residual deformation, 252  
Rust staining, 382

**S**

Screening, rapid, 325  
Segregation, trace impurity,  
    252  
Sensitization, 367  
Service examinations, 103  
Site lattice, coincidence, 252  
Slow strain rate testing, 355  
Sodium chloride, 340  
Soil exposure, 103  
Staining, rust, 382  
Statistical distribution, 3, 65  
Statistical methods, 115  
Steam autoclave test, 239  
Steel, 65, 103, 282  
    carbon, 27  
    stainless, 188, 204, 313,  
        325, 367  
    austenitic, 340  
    rust staining on, 382  
Storage environment, 103  
Stress corrosion cracking, 27,  
    188, 313, 325, 340  
Sulfate, 204

**T**

- Tanks, storage
  - ammonia, 27
  - nuclear waste, 103, 188
    - damage prediction, 143
    - lifetime prediction, 126, 165, 224
    - multi-purpose, 115
    - waste container integrity, 103
- Tarps, plastic, 103
- Tearing modulus, 355
- Titanium
  - alloy, 143
  - Grade-2, 126
  - Grade-12, 126
- Thermal loading, 115
- Tuff Repository, 165

**V**

- Velocity, 268

**W**

- Waste, nuclear, 224
  - high level, 115, 143, 165, 188
  - low level, 282
- Weibull, 3
- Welds, spot, 340

**Y**

- Yucca Mountain, 115, 188

**Z**

- Zircaloy-4, 239
