

Subject Index

A

Aircraft transparency, crack propagation
prediction, 766
Al₂O₃ ceramics, impact testing, 793
Aluminum alloys
stable growing crack, 48
tungsten inert gas welded, 339
Aluminum beam, elastic-plastic Mode II fracture,
547
Anderson-Dodds constraint correction procedure,
342
ASTM A 508, 233, 325, 342
ASTM E 399, 233, 308
ASTM E 813, 308, 410
Austenitic stainless steel, flawed piping, fracture
mode, 652
Automated mesh generation, 766
a/W ratio, 108

B

Bending, ductile crack growth, 447
Biaxial stress, Griffith fracture criterion, 529
Bimaterial, stress intensity factors, mixed-mode
loading, 778
Brittle materials
protrusion interference, 529
surface crack, 617

C

Calibration function, 745
Canopy, fracturing patterns during ejection, 766
Cast iron, heavy-section ductile, lower-bound
fracture toughness, 355
Center-cracked tension specimens, ductile-brittle
transition, 376
Ceramics, impact testing, 793
*C** integral, 481, 498
relationship with load-line deflection rate, 510
Cleavage fracture, 21
carbon steel, 376
crack initiation, fracture toughness, 108

ductile-brittle transition, 342
growth affected, 369
size effects on fracture toughness, 62
small-specimen toughness in transition region,
325
transition region, 233
weakest link model, 186
Cohesive strength, 87
Constraint-based models, 215
Constraint effects
correction procedure, 342
stress volume model, 186
Constraint loss, 87
Crack, random size and toughness, fracture
probability, 672
Crack closure, 498
cast stainless steel, 722
large unload-reload cycles, 706
Crack depth, 108
Crack extension, as function of position, 339
Crack face, protrusion interference, 529
Crack growth
creep, relationship between *C** integral and
load-line deflection rate, 510
ductile, 447
fatigue, *see* Fatigue crack growth
inclined elliptically shaped subsurface crack,
691
intergranular mode, 498
small scale and transition creep conditions, 481
transgranular mode, 498
Crack initiation, 21
cleavage, fracture toughness at, 108
Crack length, versus displacement, 422
Crack-mouth displacement, 410
Crack-opening angle model, 447
Crack propagation
cyclic loading, 722
prediction in aircraft transparencies, 766
Crack shape, during ductile tearing and fatigue
crack growth, 706
Crack tip
constraint, 186
displacement, 48

Crack tip—*continued*

- fields, 152
- high- and low-triaxiality states, 21
- stress singularity, 464

Crack tip opening displacement

- carbon steel, 376
- creep crack growth, 510
- eccentric cracks, 581
- local brittle zone effect, 264, 291
- testing, 131
 - heat-affected zone toughness, 291
- under strain control, 636

Creep

- mean load effects, 498
- small scale and transition conditions, 481
- Creep-brittle materials, crack growth rates, 510
- Creep crack growth, relationship between C^*
 - integral and load-line deflection rate, 510
- Creep-ductile materials, crack growth, 481

Cr-Mo-V steel

- crack growth, 481
- creep-ductile behavior, 510

 C_I parameter, 481

Cubic Hermite interpolation, 560

Cyclic bending, 691

Cyclic loading, deformation and elastic-plastic fracture behavior, 722

D

Damage zone model, 547

Deflection rates, load-line, 481

Deformation, cyclic loading, 722

Detonating cord, 766

Dislocation free zone, 464

Dislocations, inverse pileup, 464

Displacement, versus crack length, 422

Double-edge notched tension specimens, ductile-brittle transition, 376

Ductile-brittle transition, 186

- dislocation dynamics, 464
- fracture toughness, 308, 342
- increasing in-plane plastic constraint, 376
- scatter, interpretation as statistical event, 369
- small specimen toughness, strain rate effect, 325

Ductile crack growth, in bending, resistance curves, 447

Ductile fracture, 48

- application to polymers, 745
- carbon steel, 376
- growth affected, 369

Ductile materials, elastic-plastic Mode II fracture, 547

Ductile tearing, 21, 652

- during large unload-reload cycles, 706

Dynamic loading, fracture mode evaluation, 652

Dynamic fracture, impact testing, 793

E

Eccentric cracks, weight function, 581

Elastic biaxiality parameters, 62

Elastic fracture mechanics, high flux isotope reactor, 672

Elastic-plastic fracture, 21, 48

- cyclic loading, 722
- ductile-brittle transition, 186
- ductile crack growth, 447
- Heavy Section Steel Technology Program, 131
- Mode II, 547
- small specimen, strain rate effect, 325
- surface cracks, 339
 - growth during large unload-reload cycles, 706
- transition region, 233
- T -stress analysis, 62
- Embrittlement, high flux isotope reactor, 672
- Energy-balance condition, eccentric cracks, 581
- Energy dissipation rate, 447
- Engineering Treatment Model, 636

F

Failure, under strain control, 638

Fatigue crack growth

- inclined elliptically shaped subsurface crack, 691
- low cycle, 722
- mean load effects, 498
- surface, during large unload-reload cycles, 706

Ferritic steel

- ductile-brittle transition region, 186
- flawed piping, fracture mode, 652

Finite element analysis

- interface cracks under mixed-mode loading, 778
- large deformation, 376
- Mode II fracture, 547
- shallow-crack fracture toughness, 131
- size effects on cleavage fracture toughness, 62
- three-dimensional, 560
- two-parameter fracture mechanics, 21

Finite element model, crack propagation in aircraft transparencies, 766

Flat plate, nonuniform stresses, 560

Fracture
 intergranular, 793
 time-dependent, 652
 mechanics, research progress, 5
Fracture mode, evaluation, dynamic loading, 652
Fracture stress
 dependence on orientation, magnitude and
 biaxiality, 529
 Griffith crack, 529
Fracture toughness, 21
 cleavage, analysis, 186
 ductile-brittle transition, 308, 342, 464
 dynamic initiation, impact testing, 793
 dynamic loading effect, 464
 dynamic tests, 108
 elastic-plastic, 233
 heat-affected zone, 291
 high flux isotope reactor, 672
 in-plane plastic constraint, 376
 J-integral, 410
 J-R curves, 422
 lower-bound, 171, 308
 heavy-section ductile cast iron, 355
 transition range, 215
 transition region, 233, 325
 plane-strain, 617
 polymers, 745
 relation to constraint, 87
 scatter
 brittle-ductile transition region, 369
 small-specimen, 233
 shallow-crack, 131
 size effects, 62, 186
 small specimens, 355
 transition region, 325

G-H

Green's function, 581
Griffith cracks, 529
Heat-affected zone, 264
 crack tip opening displacement testing, 291
Heavy section steel technology, 131
High flux isotope reactor, fracture toughness, 672
Hoop stress, fracture probability, 672
Hutchinson-Rice-Rosengren field, 48

I

Impact testing, ceramics, 793
Inclined elliptically shaped subsurface crack,
 fatigue crack growth, 691
Inconel 718, surface crack growth, 706
In-plane plastic constraint, ductile-brittle
 transition, 376

Interface cracks, stress intensity factors, 778
Intervoid necking, 87

J

J integral, 21, 48, 233, 308, 325
 cyclic loading, 722
 as function of position, 339
 high-strength steels, 410
 shallow-crack fracture toughness, 131
 surface crack growth during large unload-
 reload cycles, 708
 under strain control, 636
J-Q theory, 48, 62
 pressurized thermal shock analysis, 152
J-R curve, 447
 cast stainless steel, 722
 development, normalization, 422
 polymers, 745
J-T theory, 48

L

Large-scale yielding, cyclic loading, 722
Leak-before-break principles, 652
Limit load, 422
Linear cumulative damage rule, 498
Linear-elastic fracture mechanics, 447
LMN function, 422
Loading
 cyclic, 724
 near crack tip, 87
 proportional, 87
Load-line deflection rate, relationship with *C*^{*}
 integral, 510
Load ratio, 498
Load separation method, polymers, 745
Local brittle zones, effect on fracture toughness,
 264, 291

M

Mechanical breakers, aircraft transparencies, 766
Mechanical inhomogeneity, 291
Mixed-mode loading, interface cracks, 778
Modified boundary layer, 62
Moire interferometry, 48

N

Near crack tip loading, 87
Normalization, *J-R* curve development, 422
Nuclear fuel casks, spent, fracture toughness, 355
Nylon, ductile fracture method application, 745

P

PACE, 766
 Paris law relationship, 691
 Phase angle, interface cracks, 778
 Piping, flawed, dynamic loading, fracture mode evaluation, 652
 Plane-strain fracture toughness, 617
 Plane stress tension, 636
 Polycarbonate, ductile fracture method application, 745
 Polymers, ductile fracture method application, 745
 Power law fit, 422
 Pressure vessel steel, fracture toughness, transition region, 342
 Pressurized thermal shock, reactor pressure vessels, 152
 Proof testing, 706
 Proportional loading, 87
 Protrusion interference, crack face, 529

Q

Q field parameter, 21
Q-stress parameter, 108
 pressurized thermal shock, 152
 shallow-crack fracture toughness, 131

R

Radiation embrittlement, 672
 Reactor pressure vessel, fracture toughness, 131
 Research, progress in, 5
 Residual stresses, effect on fatigue crack growth, 691
 Resistance curves, *see also J-R* curves
 analysis, surface crack, 339
 ductile crack growth in bending, 447
 elastic-plastic Mode II fracture, 547
 surface crack growth during large unload-reload cycles, 706
 under strain control, 636

S

Scatter
 in ductile-brittle transition region, 186
 small-specimen fracture toughness, 233
 Self-consistency condition, eccentric cracks, 581
 Shot-peening, 691
 SiC_w/Al₂O₃ ceramics, impact testing, 793

Silicon-carbide whiskers, impact testing, 793
 Single-edge notched bend specimen, nylon, 745
 Single-edge notched tension specimens, ductile-brittle transition, 376
 Single-specimen test analysis, lower-bound toughness in transition, 171
 Singular integral equation method, 691
 Size, effects
 cleavage fracture toughness, 62
 toughness, 186
 weakest-link theory, 215
 Small-scale yield
 constraint-based model, 215
 correction, 108
 Small-specimen fracture toughness, 233
 Spallation, impact testing, 793
 Stable crack growth, 547
 length, 369
 Stainless steel, cast, cyclic loading effects, 722
 Statistically based models, 215
 Steel
 elastic-plastic fracture, 233
 fracture toughness, transition region, 325, 342
 heat-affected zone toughness, 291
 high-strength, *J*-integral fracture toughness, 410
 low alloy, fracture toughness in transition region, 308
 lower-bound fracture toughness, 171
 transition region, 171
 Steel bridges, eccentric cracks, 581
 Strain rate, effect
 on small specimen fracture toughness, 325
 of fracture mode, 652
 Stress
 nonuniform, 560
 singularity at crack tip, 464
 triaxiality, 21
 Stress intensity factors
 crack branching, impact testing, 793
 cracked finite-width plate under tension, 581
 effective, 691
 interface cracks, 778
 mixed-mode, 529
 opening mode, 691
 range, crack growth rate and, 498
 surface cracks
 brittle materials, 617
 flat plates, 560
 Stress rate dependence, 464
 Stress triaxiality, 87
 Stress volume model, 186
 Structural integrity, assessment, 62
 Subsurface crack, inclined elliptically shaped, fatigue crack growth, 691

Surface crack
 brittle materials, 617
 flat plates subject to nonuniform stresses, 560
 growth, Inconel 718, 706
 resistance curve analysis, 339

T

Temperature, elevated, creep and fatigue crack
 growth, 498
 Three-point bend specimens, 410
 Ti-6242Si alloy, equiaxed or lamellar
 microstructure, 510
 Transition region, *see also* Ductile-brittle
 transition
 elastic-plastic fracture, 233
 fracture toughness, 308, 325
 steel, 171
 Transition temperature, 215
T stress, 62, 108
 Two-parameter fracture mechanics, crack-tip field
 associated with stable crack growth, 48

U-V

Unloading compliance, 410
 Void coalescence, 87

Void growth model, 87
 Void nucleation, 87

W-Z

Weakest link model, 186, 215
 multipass welded joints, 291
 Weibull analysis, 215
 fracture toughness in transition region, 308
 Weibull distribution, 171, 264
 mixed, 369
 Weibull slope, fracture toughness, 325
 Weibull statistics, fracture toughness, transition
 region, 342
 Weight function, 560
 eccentric cracks, 581
 Welded joints, multipass
 CTOD testing for heat-affected zone toughness,
 291
 local brittle zone effect on fracture toughness,
 264, 291
 Zero-shift procedure, 410
