### About the Authors

**B. BOSSU, B.Sc.**, is section chief of the Testing Laboratory of the French National Conservatory of Arts and Crafts (CNAM)

**M. CHATAIN, IDN Engineer** is chief of the Center of Study for Plastic Materials (CEMP), Paris, France.

**P. DUBOIS**, is professor of plastochemistry and plastology, National Conservatory of Arts and Crafts (CNAM); and director of the Center of Study for Plastic Materials (CEMP).

**J. ROUGEAUX, CNAM Engineer**, is chief of the Plastics Section, General Laboratory for Shipping Containers in France.

**HILDING HÖGBERG** obtained his doctor's degree at the University of Uppsala in Sweden specializing in the physical-chemical properties of synthetic high polymers. He is chief of the Plastics Laboratory of the Research Division of L. M. Ericsson Co., Stockholm. In this capacity he is concerned with test methods and molding techniques for plastics. He also serves as a consultant within the company on questions pertinent to plastics in general.

**NIUMA GOLDENBERG** graduated in engineering in 1950 from the Polytechnical Institute in Bucharest, Rumania. From 1950 to 1956 he

worked at the Chemical Research Center of the Romanian Academy where he received the "State Prize" for a new procedure in the synthesis of phenol-furfural resins. Since 1956, he has been director of the processing laboratory for plastics at the Chemical Research Institute ICECHIM—Bucharest. He is a member of the Polymer Commission in the Romanian Scientific Association of Engineers and was the Romanian representative for ISO/TC-61 in 1956 and 1957.

**MIRCEA ARCAN** graduated in civil engineering from the Bucharest Polytechnic Institute. Since 1948 he has been on the teaching staff of the Civil Engineering Institute in Bucharest and is now associate professor for strength of materials. From 1950 to 1957 he was also head of the Experimental Stress Analysis Laboratory at the Institute for Applied Mechanics of the R.P.R. Academy. He is now head of the Division for Computation and Experimental Stress Analysis at the Bucharest Institute for Civil Engineering (ICML).

**EDUARD NICOLAU** graduated in civil engineering from the Bucharest Polytechnic Institute. From 1950 to 1954 he was assistant professor for applied physics at the Bucharest Institute and since 1950 he also has been research officer at the Institute for Applied Mechanics of the R.P.R. Academy. At present he is head of the Photo-

elasticity Laboratory at the Bucharest Research Institute for Civil Engineering (ICML).

GÉRARD DE SENARCLENS studied chemistry at the Universities of Berne, Zurich and in Germany. He obtained his doctor's degree in physical chemistry at the University of Basel in 1932. Then he entered the Usines Diélectriques of Delle (France) and in 1940 he was transferred to the company's main works—The Swiss Insulating Works at Breitenbach—where he is now a vice-president. Mr. de Senarclens is chairman of the Swiss TC-15, Insulating Materials, and of the working groups "Encyclopedia of the Insulating Materials" of the International Elec-

trotechnical Commission (IEC) and of the Swiss Electrotechnical Committee (CES).

H. WARBURTON HALL following post graduate work in physics at the University College of Wales did research in industry on textiles of the Royal Aircraft Establishment where he specialized in nonmetallic materials. Since 1952 he is assistant director for material research and development of the British Ministry of Supply. He is also superintendent of the Nonmetallic Materials Research and Development Laboratories which he organized. He has published in the fields of textile and high polymer physics and dielectric behavior of materials.
