

# Subject Index

## A

Amontons-Coulomb model, 55  
 ASTM D 2047, 124  
 Attorney, SSAF accidents, 89

## B

Biomechanical coefficient of friction, 124  
 Biomechanical traction, 89  
 Boundary friction, determination, 55  
 British Portable Pendulum Test, 133

## C

Claims evaluator, SSAF accidents, 89  
 Coefficient of friction, 1  
     biomechanical, 124  
     determination, 55, 73, 82, 102  
     mobility disabled, 39  
     multicomponent force plate, 147  
     pedestrian, 124  
     pedestrian surfaces, 55  
     shoes, 55  
     testing appliances, 73  
 Critical time, 133

## D

Data acquisition, multicomponent force plate, 147  
 Disabled, slip resistance needs, 39  
 Dynamic mechanical thermal analysis, 133

## E

Elderly  
     spontaneous falls, video recording, 7  
     SSAF accidents, biomedical and environmental characteristics, 17  
 Environment, falls in elderly, 17  
 Expert witness, SSAF accidents, 82

## F

Falls  
     defense of accidents, 89  
     elderly, biomedical and environmental characteristics, 17  
     forensic engineering investigation, 82  
     mechanics, 82  
     modeling, 55  
     spontaneous, video recording, 7  
 Flooring materials, slip resistance, 133  
 Foot-ground contact, falls in elderly, 17  
 Footwear, test method, 113  
 Force plate, 28, 39, 124  
     multicomponent, 102, 147  
 Four S rubber, 133  
 Friction, measurement at sliding speed, 113

## G

Gait  
     dynamics with step height alterations, 28  
     stance and swing phase, falls during, 17  
     unsteadiness of, elderly, 7  
     velocity, 124  
 Ground reaction force  
     determination, 102  
     multicomponent force plate, 147  
     walking, 28

## H

Horizontal Pull Slipmeter, 73

## K

Kistler Quartz Force Plate, 102

## L

Liability, SSAF accidents, 89  
 Limiting friction, determination, 55  
 Litigation, defense of SSAF accidents, 89

## M

Mobility disabled, slip resistance needs, 39

## N

National Academy of Forensic Engineers, 82

Nonslip surface, 124

## P

Pedestrian gait model, 124

Pedestrian surfaces, coefficient of friction, 55

## R

Risk taker, 89

## S

Safety engineering, 113

SATRA Friction Test, 113

Shoes

coefficient of friction, 55

sole design, 113

Shoe/surface interface, 28, 102, 147

Sliding friction, determination, 55

Slipperiness, evaluation, 73

Slip resistance, 102

determination, 73

flooring materials, 133

floors, 113

mobility disabled needs, 39

multicomponent force plate, 147

shoes, 113

Slips

defense of accidents, 89

elderly, biomedical and environmental characteristics, 17

forensic engineering investigation, 82

modeling, 55

Software, multicomponent force plate, 147

Standard rubber slider, 133

Step height, gait dynamics, 28

Sticktion, 73

Stumbles

defense of accidents, 89

elderly, biomedical and environmental characteristics, 17

modeling, 55

## T

Tortfeasor, 89

Tread pattern, design guidelines, 113

Tribometry, walking surfaces, 73

## V

Video recording, spontaneous falls of elderly, 7

Vision, impaired, falls in elderly, 17

## W

Walking

ground reaction forces, 28

mechanics, 82

slip resistance needs of mobility disabled, 39

Walking surfaces, tribometry, 73

Wear tests, 113
