

Index

A

- Acoustic emission test, 6, 7, 21
- Akiyama, T., 294
- Aluminum alloys
 - 2017, 12
 - 5083, 12
 - 7075-T7351, 357
- Anderson, T. L., 210
- Andrews, W. R., 308
- ASTM
 - Test Method for J_{Ic} , a Measure of Fracture Toughness (E 813), 3, 83, 192, 193, 210, 216
 - Blunting line evaluation, 7, 98, 178, 186, 411
 - Difficulties with, 96–99, 117, 148, 166, 181
 - J evaluation, 61, 104–105
 - J_{Ic} definition, 4, 50
 - Sensitivity analysis, 84
 - Suggested improvements, 62–65, 127–130, 357–361, 411, 417
 - Test Method for Plane-Strain Fracture Toughness of Metallic Materials (E 399), 30, 36, 263, 339, 418
- Auerkari, P., 363

B

- Bakker, A., 394
- Bearings, roller, 120
- Bending, reverse, 35–40, 43–45
- Bernard, J., 131
- Blauel, J. G., 104

British Standards

- Methods for Crack Opening Displacement Testing (BS 5762-1979), 30, 188, 210, 230
 - Correlation with other methods, 248–255
- Methods of Test for Plane Strain Fracture Toughness (K_{Ic}) of Metallic Materials (BS 5447-1977), 30

C

- Charpy V-notch testing, 254
- Cleavage fracture, 196
- Clevis design, 120–124
- Compact tension specimens, 375
- Compliance in test rig, 377–378 (*see also* Clevis)
- Compression, local, 28–35, 43–45
- Copper plating technique, 323
- Crack initiation and propagation, 183, 196, 216–229
 - Calculation of, 138–141
 - Factors affecting, 170–181
 - Measuring methods, 89–95, 412–414
 - AC potential drop, 363, 369
 - DC potential drop, 108, 115, 137–138, 183, 338, 394
 - Key curve, displacement based, 308
- Multispecimen heat tinting, 183
- Partial unloading, 338
- Mechanism, 49–52, 112
- Resistance to growth, 173–177
- Under constant load, 322

- Crack-tip opening displacement, 30, 188, 210, 230
 Correlation with other methods, 248–255, 278
- D**
- Dawes, M. G., 23, 210, 258
 deVries, M. I., 183
 Displacement-based key curve method, 308
 Domian, H. A., 150
 Double clip gage technique, 263, 294
 Druce, S. G., 166
 Ductile-brittle transition range, 196, 210, 247, 258, 261
 Ductile crack growth, 183
- E**
- Electrical potential test (*see* Potential drop test methods)
 Emanuelson, R. H., 68
- F**
- Fatigue cracking, 24–27
 Fatigue precracking, 23, 24
 Faucher, B., 278
 Ferritic materials, 399 (*see also* Steel alloys)
 Fujita, T., 294, 322
 Futato, R. J., 68, 84, 150
- G**
- Geometry effects, 166, 210, 323
 Gibson, G. P., 166
- H**
- Heerens, J., 338, 411
 Hellmann, D., 338
 Hiser, A. L., 263
 Hole geometries, 120, 123
 Hollstein, T., 104
- I**
- Ingham, T., 47
- J**
- J testing, 84, 104, 131, 183, 278 (*see also* ASTM Test Method for J_{Ic} , a Measure of Fracture Toughness [E 813])
 Correlation with other methods, 248–255
 Effects of specimen geometry, 210
 Effects of strain aging, 150
 Under constant load, 322
 J_{Ic} test methods, 3, 83, 96–103 (*see also* ASTM Test Method for J_{Ic} , a Measure of Fracture Toughness [E 813])
 J - R curve determination procedures, 186, 263, 417
 JSME Standards
 Standard Method of Test for Elastic-Plastic Fracture Toughness J_{Ic} (S001-1981), 3, 294
- K**
- Kagawa, H., 294, 322
 Key curve method, displacement based, 308
 Knaack, J., 338
 Kobayashi, H., 3
- L**
- Loading displacement rate effects, 155–165
 Loss, F. J., 263
 Lowe, A. L., 84
- M**
- Mayville, R. A., 117
 McHenry, H. I., 210
 Microstructural effects, 200–207

Miglin, M. T., 150
Müller-Roos, J., 338

N

Nakamura, H., 3
Nakazawa, H., 3
Neale, B. K., 375
Notches, chevron, 27

P

Partial unloading compliance test method, 106, 107, 117
Potential drop test methods, 6, 7, 21
AC, 363, 369
Comparison between AC and DC, 397
DC, 108–115, 338, 394, 397
Precracked Charpy specimens, 375
Precracking fatigue, 133, 134
Priest, R. H., 375

R

R-curve test, 3, 6, 12, 19
R ratio, 41–45
Reactor pressure-vessel steels, 47, 199, 230, 375
Rolfe, S. T., 230
Roller bearings, 120
Rosenfield, A. R., 196

S

Saarelma, H., 363
Saario, T., 363
Schaap, B., 183
Schwalbe, K.-H., 338, 411
Sensitivity analysis, 84
Shetty, D. K., 196
Silicone-rubber crack infiltration technique, 167
Single-specimen compliance procedure, 263

Size effects, 20, 21, 166, 207, 230 (*see also* Specimen geometry effects)

Specimen geometry effects, 166, 210, 323

Specimen size effects, 20, 21, 166, 207, 230 (*see also* Specimen geometry effects)

Stable crack growth, 166, 183

Steel alloys

20 MnMoNi 55 (UNS K12539), 108–110, 113–115, 125–128

316H Stainless (UNS S31400), irradiated, 131

304 (UNS S30400), 18, 19, 183, 318–320

4340, 17, 18

A106, 160–162, 165

A131, 230

A508, 196

Crack growth testing by displacement-based key curve method, 318–320

Crack-tip opening displacement testing, 230

J-*R* curves, 167, 178, 179

Strain aging, 151, 152

Upper shelf toughness, 47

A515 Grade 70, 150

A516, 160–162, 230

A517, 230

A533, 12–21, 47, 230, 318–320

A542 (UNS K21590), 167, 179–180

Austenitic stainless, 183

BS4360 43A, 167

Carbon-manganese, 173

EH36, 210

G43370, 17–18

HSST-02, 50, 51

HT60, 15, 16

HT80, 19, 20

NiCrMoV, 33

Nuclear reactor, 47, 199, 230, 375

- Pressure vessel, 47, 150, 199, 230, 375
 Ship, 230
 U12539, 108–110, 113–115
 Stepwise loading technique, 326–331
 Strain aging, 150
 Stress relief, 27–30
 Stresses, residual, 25–41
 Stretched zone width test, 4, 15–18
 Sulfur content, 56
- T**
- Tearing modulus, 292
 Temperature effects
 At upper shelf, 49
 In AC potential drop method, 369–372
 On fracture toughness of steels, 56–57, 200–207, 214–224, 230
 On fracture toughness of weld metals, 74–82
 On slope of J - R curve, 150
 Titanium alloy
 Ti-6Al-4V, 9, 11, 12
 Torronen, K., 363
 Towers, O. L., 23
 Transducer calibration, 86–90
 Tyson, W. R., 278
- U**
- Ultrasonic echo test technique, 6, 7, 21, 323
 Unloading technique for crack measurement, 278, 363, 375
 Upper shelf toughness, 47
 Urabe, N., 294, 322
- V**
- Van Der Sluys, W. A., 68, 84, 150
 Verzeletti, G., 131
 Voss, B., 104, 117
- W**
- Wallin, K., 363
 Weld materials, 68, 131, 151, 162–165
 Welding fluxes, 81
 Welding Institute, 23
 Welding procedures, 68
 Welded joints, 23
 Weldments, 23, 26, 27
