BIBLIOGRAPHY

The results of this program have been used in many working documents of ISO/TC 156/WG 4 and other publications covering specific issues that arose from this study. A partial list of these papers is given below to assist researchers in locating these publications. The papers listed below are shown in chronological order and include many of the progress reports that have been published on this program.

- ISO/TC 156/WG 4 WORKING DOCUMENTS**
- Realization of the ISOCORRAG program and evaluation and application of the results represented a very important part of the WG 4 activity. About 100 working documents were elaborated in a broad cooperation of the WG 4 members. Many of documents bring the evaluation of results on the national test sites. Some of them formed a basis for later open publication. The list of references is limited on important specific information.
