

Subject Index

A

Acoustic emissions, 101, 256
 Analysis techniques
 computer graphics
 imaging, 72, 183
 computerized data, 35, 85, 183
 cyclic tests, 121, 152, 215
 design parameters, 55
 finite element, 85, 137, 152
 mechanical testing, 101, 183
 nondestructive testing, 3, 25, 35 (*see also*
 Nondestructive testing techniques)
 robotic scanning, 72
 qualitative methods, 3, 85
 shear lag, 236
 ASTM standards
 D 638—Test Method for Tensile
 Properties of Plastic, 152
 Attenuation measurements, 55, 85, 215
 Autoclave cycles, 152

B

Biaxial stress fields, 55
 Bimaterial cracking, 137, 236

C

Compaction operations, 152
 Composite applications,
 aircraft components, 152, 163, 183, 200
 butt joints, 137
 construction panels, 55
 flywheels, 215
 foam core blocks, 137
 heat exchangers, 3
 hip implants, 256
 regenerators, 3
 structural, 72
 turbines, 3
 Composite defect parameters
 classification, 72
 compression, 35, 183, 200
 contaminants, 72

cracking, 163, 200, 236
 creep, 101
 damage accumulation, 25
 delamination, 72, 163, 183, 200
 density, 85
 elasticity, 121, 215
 fabrication, 3, 85
 fatigue, 101, 152 (*see also* Fatigue-
 induced damage)
 fracture, 121, 137
 impact, 72, 183, 200
 manufacturing, 3, 85, 137
 porosity, 72, 152
 residual strength, 101, 183
 strain, 55, 121, 215
 stress, 121, 137, 183
 surfaces, 3
 tension, 35, 152
 Composite types
 borosilicate glass, 3
 carbon fiber, 85, 183
 cellular foam, 137
 ceramic matrix, 3
 elastomeric binders, 121
 fiberglass laminates, 152, 215
 futuristic structures, 55
 fiber-reinforced laminates, 72, 101
 graphite/epoxy laminates, 163, 200, 236
 metal matrix, 25, 256
 panels, 55
 polymers, 35, 137
 solid rocket propellants, 121
 Computer graphics imaging, 72, 183
 Critical load analyses, 137
 Curvature measurements, 55
 Cyclic loading tests, 121, 152, 215

D

Damage accumulation studies, 25
 Debonding behavior, 137
 Delamination damage, 72, 163, 183
 Dewetting process, 121
 Dynamic mechanical analysis, 101

E

Elasticity studies, 121, 215

F

Fabrication techniques, 3, 85
 Fatigue-induced damage
 fiber-reinforced laminates, 101, 152
 glass-epoxy laminates, 215
 graphite-epoxy laminates, 236
 metal matrix composites, 256
 Finite element analysis, 85, 137, 152, 236
 Fracture mechanics models, 121, 137, 215
 Frequency multiplexing, 101

H

Heat exchanger applications, 3
 Hip implant studies, 256

I

Imaging enhancement methods, 72
 Impact damage modeling, 200
 Installation damage, 163

L

Laminated components, 72, 101, 163 (*see also* Composite types)

M

Material properties, 85
 Mathematical models, 55
 Mechanical performance testing, 101, 183
 Metallographic data analysis, 163
 Microcracking analysis, 215
 Monotonic tension tests, 152

N

Nondestructive testing techniques
 gas dilatometer, 121
 monochromatic synchrotron radiation, 25
 optical fiber transducer, 55
 optical microscopy, 3
 radiography, 3, 101, 183, 256
 scanning acoustic microscopy, 3, 72, 101
 surface replication, 256
 thermography, 3
 ultrasonics, 3, 72, 85 (*see also* Ultrasonic testing techniques)

uniaxial tension, 121
 X-ray tomography, 25, 35, 85

O

Optical microscopy, 3
 Optical fiber transducers, 55

P

Peel forces, 200
 Polar backscattering, 215
 Propagation law, 236

R

Residual strength testing, 101, 183
 Resin injection procedures, 163
 Robotics, 72, 183

S

Spatial resolution improvements, 25
 Specimen fabrication, 3
 Stacking sequence, 236
 Static strength tests, 152
 Stress-strain relationships, 121
 Structural stiffness studies, 256

T

Three-dimensional mapping, 25
 Three-point bending tests, 55
 Transverse cracking, 236

U

Ultrasonic testing techniques
 acoustic, 3, 256
 computerized, 183, 215
 C-scans, 101, 163, 200
 digital, 85, 215
 multiaxis robotic, 72, 183
 Uniaxial tension testing, 121

V

Vibrothermography, 101
 Viscoelastic behavior, 101, 121

W

Wiener deconvolution, 163

X

X-ray radiography, 101, 183, 256
