

Subject Index

A

Aerospace industry, 104
 Aging, 196, 330
 resistance, 65
 Aluminum, 18, 56, 79
 American Society of Mechanical
 Engineers code, 3, 353
 Anvil block, 249
 ASTM standards, 353
 A 707, 196
 Austenite grain size, 160
 Austenitizing, 33
 Aviation industry, 104

B

Bearing journal wear, 129
 Blow force, maximum, 249
 Bottom pouring, 93
 Bursts, forging, 241

C

Carbon, 79, 104, 196
 carbon monoxide reaction, 56
 Chromium, 33, 330
 Chromium ferritic steel, 267,
 317
 Chromium-manganese-nickel
 alloy, 79
 Chromium-molybdenum-nickel-
 niobium steel, 259
 Chromium-molybdenum vanadium
 steel, 3, 241, 305
 Copper precipitates, 196
 Corrosion resistance, 104, 259
 Corrosion, stress, 280
 Cracking, premature, 148
 Crack propagation, unstable,
 160
 Crankshafts, grain flow, 129
 Creep, 3, 280
 rupture strength, 267, 317
 CRONIDUR, 104

D

Deformation, 249
 Density difference, 305
 Deoxidation, 18, 56
 Detection and characterization,
 213
 Die-forging hammer, 249
 Disk forgings, 280
 Disk manufacturing, process
 model development, 116

E

Electric Power Research
 Institute, 280
 Electric utility applications, 280
 Embrittlement, 3, 280

F

Fatigue
 crankshaft, 129
 life, 148
 low cycle, 330
 FEM modeling, 224
 Ferrite, 65
 Ferritic steel, 267, 317
 Finite element method, 224
 Flake-like defect, 241
 Flaking, 241, 344
 Flasks, transport, 79
 Fracture, 241
 brittle, 160
 ductile, 160
 toughness, 330
 toughness, plane strain, 18

G

Gear component forging, 241
 Generators, 129
 rotors, 213
 Geothermal power station, 259
 Grain flow crankshaft, 129

Grain refining, 56
 precipitates, 160
 Grain size, 79
 austenite, 18

H

Hammer, die-forging, 249
 Hardness, aviation stainless
 steels, 104
 Head-forming, 224
 Hydrogen, 344
 Hydrogen damage, 3
 Hydrogen flakes, 241

I

Impact toughness, 160
 Inclusions, effect on toughness,
 305
 Indication sets, 213
 Induction hardening, 129
 Ingot cogging, 224
 Ingot production, 93
 International business, 353

J

Joint ventures, 353

L

Ladle refining, 93, 344
 Laves phase, 317
 Lead liner, 79
 Locomotive engine crankshafts,
 129

M

Machining, 116
 distortion following, 148
 Manganese, 18, 79, 305, 330
 Martensite, 160
 Mechanical stress relief, 148
 Models and modeling
 computer assisted design, 224
 development, simplified
 forging, 116
 FEM, 224
 methodologies, 224
 prediction, 305

Molybdenum, 3
 carbides, 33
 effect on creep rupture
 strength, 267, 317
 effect on segregation, 305
 in martensitic stainless steels,
 104, 259
 in pressure vessel steels, 3, 18
 in steel forging bursts, 241
 in superclean steels, 330

N

Nickel, 305, 330
 in pressure vessel steel, 18, 33
 in steel forging bursts, 241, 259
 in transport casks, 79
 Nickel chromium molybdenum
 vanadium, 241
 Nil-ductile transition temperature,
 18, 33
 Niobium, 104, 259, 305, 317, 330
 Nitriding, 129
 Nitrogen, 104, 330
 Nitrogen-alloyed stainless steels,
 104
 Nozzle integration, 56
 Nuclear power plant forgings
 pipings, 65
 pressure vessels, 18, 33, 93
 steam generators, 56
 transport casks, 79

O

Open die forging process, 224
 Optimization, forged disk
 manufacturing processes, 116

P

Piping, primary, 65
 Power generation diesel engine
 crankshafts, 129
 Precipitates, copper, 196
 Pressure vessels
 nuclear, 18, 33, 93
 oil industry, 3
 Pressurized slag remelting, 104
 Process model development, 116
 Punch forming, 224

R

Rhenium, 317
 Rolls, 93
 Rotors, 93, 213, 259, 267, 344
 superclean steels, 280, 305

S

Segregation prediction, 305
 Silicon, 33, 56
 Silicon killing, 18
 Steam drum head integration, 56
 Steel and steel alloys
 A 508, Class 3, 18
 A 508, Grade 1, 33
 AISI 304L, 65
 carbon-manganese-nickel
 alloy, 79
 chromium ferritic, 267, 317
 chromium-molybdenum
 (vanadium), 3, 241, 305
 copper-bearing, 196
 ferritic, 267
 forged, 79, 344
 high strength, 160
 low alloy, 196, 213
 manufacturing, 93
 SA508, Class 3, 56
 stainless, austenitic, 65
 stainless, martensitic, 104,
 160, 241, 259
 superclean, 280, 305, 330
 Stress corrosion, 280
 Stress relief, 148
 Structure property relationships,
 196
 Sulfur flaking, 344

T

Tensile strength, 259
 Tension leg platform, 196
 Thermal efficiencies, 267
 Thermal flakes, 241
 Transport flasks, spent nuclear
 fuel, 79
 Tungsten, 317
 Turbine disks or blades, 104, 317
 Turbine rotors, 213, 259, 267,
 280
 Turbine, steam, 317, 330

U

Ultrasonic testing, 65, 241
 rotor, 213
 Upper-nose temper
 embrittlement, 33

V

Vacuum carbon deoxidation,
 18, 56
 Vacuum degassing, 344
 Vacuum stream degassing, 93
 Vanadium, 3, 104, 241, 305, 330
 Vibration stress relief, 148

W

Welding, 148
 Welds, 65
 distortion and cracking, 148
 Worldwide business, 353

Y

Yield strength, 259
