

Subject Index

A

Acetic acid environments, 144
Al-base alloy, 222
Aluminum, 261
Amorphous alloy, 103
Analogical reasoning, 273
Application protocol, 75
Atmospheric corrosion, 211

C

CAPDAS, 273
Chemical potential diagrams, metal/oxide
 interface reaction control using, 28
Classification system, concrete identification,
 189
Client server architecture, 211
Computational science, 3
Computer learning, 144
Computer network, 211, 249
Conceptual structure, 273
Concrete, identification guidelines, materials
 property database, 189
Constraint-based selection, materials, 45
CORES, 273
Corrosion, 144
 object-oriented data, 117
 database, exposure tests, 211
 fatigue, 131
Creep, 261
Cyclic stress corrosion cracking, 131

D

Data evaluation, high-temperature
 superconductors, 198
Data-Free-Way, 249
Data management, 75
Data modeling, 75
Data structure, 249
Data systems, 75
Decision tree, 144
Diffusion of point defect, 3
Distributed database, 249
Dynamic stress corrosion cracking, 131

E

ECOMATERIALS, 171
Empirical modeling, 144

Environmental effect, 131
Environmental load, 171
Environmentally assisted cracking, 131
Evaluation criteria, high-temperature
 superconductors, 198
Experimental data, flexible and general
 computer-based representation, 75
Expert system
 corrosion behavior prediction, 144
 fractography, 131
 natural gas resource development, 158
Exposure tests, corrosion database, 211
EXPRESS, 75

F

Factual database, 103
Failure analysis, 117
Fatigue, 131
Fatigue crack growth, 261
Fatigue strength distribution, 222
Fe-base alloy, 222
Fractography, expert system, 131
Fracture, 131
Fusion reactor, 261
Fuzzy set theory, 131

G

Guidelines, concrete identification, 189

H

Hastelloy XR, 261
High-temperature gas-cooled reactor, 261
Hydrogen embrittlement, 131
Hypertext, 261

I

Identifiers, concrete, 189
Information-base system, 273
Institute for Materials Research, 103
Integrated computational environment, 21
Interface reaction, control using chemical
 potential diagrams, 28
International standard, 75
Internet
 material performance database for nuclear
 applications, 261
 MOOD-SX, 63
ISO 10303, 75

J

JAERI Material Performance Database, 261

K

KIND, 103

Knowledge-based system, 117

Knowledge representation, 117

L

Large data volumes, 75

Life cycle analysis, 171

Lifetime prediction, 117

Light water reactor, 261

Linear discriminant, 144

M

Material database, MOOD-SX, 63

Material indices, 45

Material properties, prediction, 3

Material property relations, high-temperature
superconductors, 198

Materials databases, 75

microstructural information, 237

Materials design, 171

virtual experiment technology integration,
21

Material-selection charts, 45

Materials Environmental Life Cycle
analysis, 171

Materials modeling, 75

Materials property database, 75

case study, 3

concrete identification, 189

microstructure, 237

Materials selection, constraint-based, 45

Material state and process path model, 75

Metallography, qualitative, microstructure,
237

Metal/oxide interface, reaction control by use
of chemical potential diagrams, 28

Microstructure, materials database, 237

MLCA, 171

Models, 3

Mold flux, 3

MOOD-SX, 63

MSAPPM, 75

Multimedia databases, 103

N

Natural gas, resource development, expert
system, 158

Nearest neighbor methods, 144

Nickel-containing alloys, corrosion behavior
prediction, 144

Nuclear materials, advanced, distributed
database, 249

O

Object-oriented database, 63

Object-oriented method, 103

Object oriented modeling, 117

Organic synthesis, 273

P

Phase diagram, 103

Polymer, 273

Polynomial network, 144

Production system, 131

Powder metallurgy alloys, mechanical
properties, 222

Pressure vessel steel, 261

Primary material data, 63

Product model, 75

Property databases, 75

case study, 3

concrete identification, 189

microstructure, 237

R

Reaction path, 28

Resource development, expert system, 158

S

Self organization of information, 273

Semantic processing, 273

Silicon single crystal, 3

Stainless steel, 261

corrosion behavior, 144

Standards, concrete identification, 189

Static strength distribution, 222

Statistical evaluation, 222

Steel

exposure tests, 211

life cycle analysis, 171

STEP, 75

Strength characteristic analysis, 222

Stress corrosion cracking, 131

Superconductors, high-temperature, data
evaluation methodology, 198

T

Tensile strength, 3, 261

Thermodynamic calculation, 3

V

Virtual experiment, technology integration for
materials design, 21

W

Weathering steel, exposure tests, 211

World Wide Web

Data-Free-Way, 249

material performance database for nuclear
applications, 261
