

# Subject Index

## A

Absorbed specific energy until fracture (ASFE) measurement, 118–123

Accidents (*see* Loss of coolant accidents; Over-cooling accidents; Reactor pressure vessels)

Accelerated irradiation experiments, 26

Aging

strain, 14, 16, 17, 23, 24

thermal, 14, 16, 17, 22, 28

Aluminum content, 28, 201

American Nuclear Society seminar (1983), 149

American Society of Mechanical Engineers (ASME)

Code, 134, 144

Section XI, 170

Specification for A508 Class 3 steel, 14, 15

Annealing

behavior, 66, 68

irradiated steels, 66–68

postirradiation, 9, 235, 242

reirradiation response and, 242–259

Antimony, 22

Arsenic, 22

ASTM Committee E-10, Subcommittee 6 Task Groups, 149

ASTM Standards

E 23-82, 58, 97, 112, 262

E 185-82, 6, 7, 17, 107, 178, 179, 183

E 208-81, 40

E 399-83, 74, 262

E 560-77, 10

E 693-79, 8, 39

E 813-81, 74, 76, 89, 122, 244

E 853-81, 10

ASTM-EURATOM Symposium on Reactor Dosimetry, 66, 162

Atomic Energy Act, German (Atomgesetz), Article 20, 181

Atomic Energy Agency, International (IAEA)

Coordinated Research Programme (CRP), 22–25, 31, 58, 62, 71

Specialists Meeting (1981), 19

Atomic Energy Commission (French), 71

## B

Bainite microstructure, 260–262, 265–268, 273–275

Boiling water reactor (BWR) pressure vessel surveillance program, 106–117

## C

Central Electricity Generating Board, 14, 17, 26

Charpy specimens, ASFE measurement of, 118–122

- Charpy upper-shelf energy, 245–252, 272–277
- Charpy V-notch (CVN) data trends  
analysis, 207–228  
mechanical property-CVN parameter relationships, 217  
structure-property relationships, 217  
synthesis, 228–234
- Charpy V-notch impact testing, 7, 23, 58, 62, 243–252  
microstructure, 272–275  
results, 112, 113, 116  
transition temperature and, 82
- Chemistry factor, 150, 152–155, 207, 210
- Cladding  
austenitic, 136  
effects of, 167, 175
- Code of Federal Regulations, U.S., 18
- Coolant temperature variation, 169, 170, 174
- Copper  
content, 99–105, 150–159, 178, 179, 199–201, 204, 208  
diffusion in iron, 255  
distribution, 188–190, 217  
embrittlement effects of, 15, 19, 24–26, 252–255, 258  
nickel and, 101–105, 150–155, 159, 229, 234, 235  
precipitates, 25–31, 192–199, 229, 232, 233, 236–238  
damage due to, 252–255, 258  
temperature shift and, 207, 212–215, 218–223, 234, 235
- Copper sulfide, 192, 195, 204  
formation of, 201, 203
- Crack (*see also* Flaws)  
arrest, 136, 144, 167, 169  
geometries, 136, 140, 141, 147  
crazed pattern, 167  
growth, 89  
initiation, 168, 174  
propagation and fracture toughness, 8
- Crack-opening displacement (COD) measurement, 118
- Crack tip opening (CTOD) monitoring, 62
- ## D
- Damage  
attenuation of, 161, 162  
prediction, U.S. regulatory position on, 18–22  
rates (*see also* Embrittlement, rates; Re-embrittlement rate), 258
- Danish Reactor DR 3, Riso National Laboratory, 262
- Design Codes, 18
- Directorate for Safety and Protection (DISP), 97
- Displacements per atom (dpa), 8, 9  
equivalent formula, 162
- Dosimetry  
component integrity testing, 38, 39  
embrittlement-neutron, 10–12  
embrittlement-related, 6  
neutron, 182
- Drop-weight testing (*see also* Impact testing), 40, 43, 45
- ## E
- Elasto-plastic toughness, 70–95
- Electric Power Research Institute (EPRI)  
annealing research, 243  
surveillance data, 29, 30, 152, 210
- Embrittlement  
aspects of, 7  
levels, 244, 245  
monitoring in light-water reactors, 177–183  
neutron irradiation studies, 13–33, 55–69  
NRC regulatory requirements for, 6, 7  
prediction, 255

- rates, 60, 258
- reactor pressure vessel structural implications of, 163–176
- residual elements influence on, 59
- Embrittlement-neutron dosimetry, 10, 11
- Energy, Charpy upper-shelf, 245–252, 272–277
- Energy criteria (*see also* Absorbed specific energy until fracture (ASFE) measurement), 119

## F

- Failure criteria, 169
- Ferrite, composition of small regions, 199–201, 223
- Ferrite-perlite structure, 260–262, 267, 268, 274, 275
- Flaws (*see also* Crack)
  - evaluation, outside, 8, 9
  - finite length, 166, 167
  - infinitely long, 167
  - influences on, 168–175
- Fluence
  - attenuation, 172
  - distribution, 38, 39, 130
  - embrittlement effects, 59
  - end-of-life (EOL), 132, 133, 211
  - factor, 150, 153, 155–159
  - hardening and, 219–221
  - monitoring, 63–66
  - predictions, 8, 10
  - temperature shift and, 207–209, 211, 212
- Fluence-embrittlement extrapolation model, 8
- Flux
  - distribution, 131, 132
  - hardening and, 221, 223
  - level shifts, 10, 11, 211
- Fracture behavior, brittle, of pressure vessel, 127–148
- Fracture criteria evaluation, static, 118–124

- Fracture mechanics behavior of flaws, 165
- Fracture stress, 272
- Fracture testing, dynamic, 118
- Fracture theory, stress-controlled cleavage, 217
- Fracture toughness
  - change in, 8
  - determining, 134, 136
  - effective, 147
  - radiation-induced loss of, 242
  - testing, 26, 35, 39, 243–247
  - upper shelf, 16, 243, 247
- French Atomic Energy Commission (CEA), 71

## G

- German KTA Rule 3203, 49, 177–183
- Guthrie data base, 150–155
- Guthrie formula, 49, 98–99, 171

## H

- Hardening mechanism, 229, 238, 239
  - irradiation-induced, 254, 275
- Hardness properties (*see also* Vickers hardness), 40, 43
  - changes, 218–223
  - irradiated steel, 66–68
  - prediction, 230, 232
- Hardness testing, 35, 40
  - rehardening studies, 67
- Heavy-Section Steel Technology (HSST) program, 165–167

## I

- Impact energy of materials, 37, 43–49
  - measurements, 118
- Impact testing (*see also* Charpy V-notch impact testing; Drop-weight testing), 26
  - fracture toughness and, 35
  - instrumented, 43, 44
  - results, 112, 113, 115, 116

Impurity, effect on material, 230, 231, 236, 237

Indian Point-2 reactor, 9

Iron

content, 199

copper diffusion in, 255

isotopes, 132, 147

Irradiation, effect of microstructure on Ni-Mo-Cr response to, 260–278

Irradiation effects, 5–12

embrittlement (*see also* Embrittlement), 14

on elasto-plastic toughness, 70–95

Irradiation experiments, 74–76

Italian Comitato Nazionale per l'Energia Nucleare ed Energie Alternative (ENEA), 97

predictions, 103–105

## J

$J_c$ , determination of, 89, 90, 94

$J_{Ic}$ , measurement, 118, 122–123

fracture toughness tests, 243–247

$J$ - $R$  resistance curves, 74, 76–89, 94

## K

Kerntechnischer Ausschuss (KTA) (*see also* KTA Rule 3203), 177

KTA Rule 3202 (German), 49, 177–183

## L

Lead factor, 181, 183

Least square fit (LSF) regression analysis, 236, 239

Light Water Reactor Study Group, 14–17

Light-Water reactors

embrittlement of pressure vessels, 187

monitoring embrittlement in, 177–183

Linear elastic fracture mechanics method, 134, 141, 144

applicability of, 165–167, 174, 175

Loviisa Nuclear Power Plant embrittlement research, 55–69

Loadings

critical transient, 134–136

dynamic and static, 119

embrittlement from, 8

stress intensity and, 142, 143

thermal-shock, 166

Loss of coolant accidents (LOCAs), 134, 136, 137, 170

## M

Manganese content, 199–203

Manganese silicate inclusions, 192–195, 202, 203

Martensite microstructure, 260–264, 267, 268, 273–275

Material degradation, mechanisms of, 14, 15

Materials test reactors data, 211–215, 230, 234–239

Metallographic techniques, 189–192, 223

Metallurgical microstructure effects, 160–178

Microanalysis of pressure vessel weld materials, 187–205

Microscopy

field ion (FIM), 217, 228

scanning electron (SEM), 189, 201

scanning transmission electron (STEM), 189

transmission electron (TEM), 217, 223, 227

Microstructures, metallurgical, 260–278

Microvoids, 216–218, 229

Molybdenum carbide, 195

Molybdenum content, 199

## N

National Energy Plan (PEN) (Italy), 97

National Nuclear Corporation (England), 14, 17

Neutron irradiation (*see also* Irradiation; Irradiation effects)  
 reference transition temperature increase due to, 96–105  
 studies in United Kingdom, 13–33

Nickel  
 beneficial effects of, 104  
 content, 19, 24–26, 30, 99–105, 192, 195, 198–203, 208  
 copper and, 101–105, 150–155, 159, 229, 234, 235  
 depletion, 192  
 distribution, 188  
 embrittlement due to, 253, 254  
 hardness and, 238, 239  
 temperature shift and, 207, 213, 214, 218, 219, 234, 235, 238, 239

Niobium, 63, 65, 66, 132

Notch strength ratio (NSR), 272, 277

Nuclear Regulatory Commission, U.S., 242

Guides, 6

Appendix G, 6, 7, 160

Appendix H, 6

draft proposal, 22

General Design Criterion, 31, 6

Guide 1.99, 14, 179

Revision 1, 10, 18–20, 22, 102, 103, 149, 171

Revision 2, 7, 10, 102, 149–162  
 trend curves, 45, 49, 50, 116, 117

perspective on irradiation effects in reactors, 5–12

regulation and licensing of reactors, 5, 149

requirements for embrittlement, 6, 7  
 screening criteria (SC), 165, 171, 174

Unresolved Safety Issue A-49, 164, 165

Nuclear Safety Standards Commission  
 in Federal Republic of Germany  
 (*see* Kerntechnischer Ausschuss)

## O

Odette data base, 152–155

Ostwald ripening process, 253, 254

Over-cooling accidents (OCAs), 164, 165, 174

## P

Parametric analysis, 165–175

Phosphorus

content, 178, 179

embrittlement effects, 15, 18, 19, 22, 25, 31

shift and, 212, 214, 215, 234

Positron annihilation studies, 25

Precipitate growth model, 237

Pressure-temperature limits, 7

Pressure vessel steels

boiling water reactor surveillance  
 program, 106–117

elasto-plastic toughness of, 70–95

integrity (*see also* Reactor pressure  
 vessel, safety), 136–147

irradiation embrittlement

mechanisms, models, and data  
 correlations, 206–241

studies of, 13–33

regulatory considerations (*see also*  
 Nuclear Regulatory Commission,  
 Guides), 149–162

reirradiation response of and annealing,  
 242–259

weld materials, 187–205

Pressure water reactors (PWR), 97

Italian Design Criteria, 97, 98

safety of against brittle fracture, 127–148

threat to integrity, 164

Pressurized-thermal-shock (PTS) (*see also*  
 Thermal shock)

accidents, 8, 9, 11

analyses, 7, 8, 243

equation, 98, 99 (*see also* Guthrie  
 equation)

Pressurized-thermal-shock (PTS) (*continued*)  
 issue, resolution of, 149, 160, 161  
 reactor pressure vessel structural implications of embrittlement to, 163–176

## R

Rancho Seco accident, 169  
 Reactor heatup and cool-down limits, 150  
   cool-down rates, 169, 170  
 Reactor pressure vessels (*see also* Pressure vessel steels)  
   accidents, ability to withstand, 96, 97  
   attenuation of damage in walls, 161, 162  
   brittle fracture behavior, evaluation of, 127–148  
   component integrity research, 34–51  
   embrittlement aspects, 7  
   end-of-lifetime, 114, 177  
   irradiation behavior, 34–51  
   irradiation effects in, 5–12  
   irradiation embrittlement of, 206–241  
   Loviisa, Finland, 56–68  
   monitoring embrittlement of, 177–183  
   safety  
     analyses, 11  
     PWRs against brittle fracture, 127–148  
     regulations (*see also* Nuclear Regulatory Commission, 5, 6  
     standards, 177–183  
   structural implications of embrittlement, 163–176  
   surveillance program, Loviisa, 56–68  
   wall temperature cool-down rates, 169, 170  
 Reactor vessel beltline  
   definition, 6

  effect of irradiation in, 182  
 Re-embrittlement rate, 247, 252, 254, 255, 258  
 Reirradiation response, 247–258  
 Residual elements (*see also* Copper; Nickel; Phosphorus), 59, 161  
   micro-distribution of, 187–205  
 Runge-Kutta technique, 141  
 Russell-Brown hardening model, 228, 237

## S

Silicon content, 28, 192, 199  
 Safety (*see also* Nuclear Regulatory Commission, Guides)  
   German KTA 3203 standard, 49, 177–183  
   PWR pressure vessel against brittle fracture, 127–148  
 Sizewell pressure vessel reactor (Suffolk), 14, 15, 19–21  
   studies on, 17  
 Small-angle neutron scattering techniques, 24, 25, 28, 29, 218, 224, 226–229, 237  
 Small specimen, static fracture criteria evaluation of, 118–124  
 Static fracture criteria evaluation, 118–124  
 Steels  
   A302 B, 97, 98, 107  
     chemical composition, 108  
     constant chemistry analysis, 99–104  
   A508 Class 3, 14, 15, 22, 23, 35, 71, 90–94, 97, 127  
     chemical composition, 72  
     constant chemistry analysis, 99–104  
   J-R curves, 78, 87  
   tensile properties, 73  
   A533 B Class 1, 22, 23, 35, 71, 90–94, 97

chemical composition, 72  
 constant chemistry analysis, 99–104  
*J-R* curves, 77, 80, 83  
 plate material, 243  
 tensile properties, 73  
 Cr-Mo-V, 56  
 ferritic type, 106  
 15H2MFA, 120, 121  
 Linde 80 welds, 244  
 Magnox, 14, 26–30  
 manganese-molybdenum-nickel weld wire, 243  
 20 MnMoNi 5 5, 35, 36, 40, 179  
 NiCrMo 1, 179  
 22 NiMoCr 3 7, 35, 36, 40, 127, 179  
 nickel-molybdenum-chromium BH 70, 260–278  
 reactor pressure vessel (*see also* Pressure vessel steels)  
   component integrity, 34–51  
   elasto-plastic toughness of, 70–95  
   embrittlement studies in United Kingdom, 13–33  
   irradiation behavior, 34–51  
   irradiation effects in, 5–12  
 S3 NiMo 1, 179  
 weld material properties, 72, 73, 79, 81, 82, 84–86  
 Stress intensity factors, 136, 140–147  
 Sulfur content, 28  
 Surveillance data  
   analysis of, 206, 207  
   trends, 207–211  
   commercial power reactor, 150–152  
 Surveillance programs, 17, 23, 31  
   boiling water reactor, 106–117  
   German program, 179, 180  
   plan of, 181, 182  
   requirements for, 178, 179  
   in-service inspections, 147  
 Loviisa Nuclear Power Plant research, 55–69

Surveillance testing, 119, 122  
   irradiation tests, 10, 18

## T

Tarapur Atomic Power Station (TAPS) reactors, 107–116  
 Technical University of Budapest tests, 119  
 Temperature  
   adjusted reference, 150  
   hardness and, 219–223  
   impurity-induced shift, 230, 231  
   monitoring, 182  
   transition  
     Charpy-V tests, 82, 250, 252, 253, 255, 257, 258, 275, 277  
     ductile-brittle shifts, 22, 29, 30, 243  
     impact energy and, 43–50  
     index, 112–117  
     influence of, 88, 89, 93, 94, 121  
     prediction of increase, 96–105  
     reference, 97–99, 150  
     shifts in, 16, 17, 58, 60, 61  
 Temperature-pressure limits, 7  
 Tensile properties, 40–42  
   BH 70 steel, 270–272  
 Tension testing, 35, 39, 74, 243, 244, 247  
   determination of  $J_c$  from, 89, 90  
   microstructure, 269, 272  
   results, 112, 115  
   static, 119, 120  
 Thermal shock (*see also* Pressurized-thermal-shock), 141, 146, 147  
 Tin, 22

## U

Ultrasonic investigations, 147  
 United Kingdom, neutron irradiation embrittlement studies, 13–33  
 University of Virginia Research Reactor, 244, 247

## V

Vickers hardness (*see also* Hardness properties), 40  
 microhardness, 218  
 of BH 70 steel, 261, 272

## W

Warm prestressing (WPS), 168, 175  
 path, 145, 147  
 Weld materials  
     microanalysis of, 187–205  
     properties, 72, 73, 79, 81, 82, 84–86

Weld versus base metal data, 155–161  
 Weld seam, end-of-life, 144, 148  
 Westinghouse capsule, 17, 18

## X

X-ray energy dispersive detectors (EDX), 189

## Y

Yield strength, 40, 42  
     copper precipitation and, 26–30  
     recovery, 245, 247, 249  
 Yield stress, 252, 253, 256, 258
