

Subject Index

A

Aluminum, transverse fillet weld fatigue, 34
 ASTM A710 Grade A steel, heat-affected zone, 16
 ASTM E 813-87, 256

B

Brittle fracture, wide-plate testing, 157, 160, 175, 204
 Brittle zone, local, 117, 143
 wide-plate testing, 204
 Butt-welded structural steel, corrosion in seawater, 78

C

Carbon-manganese steels, fracture toughness, 272
 Cathodic protection, welded structural and high-strength steel, 78
 Charpy impact test, underwater wet welds, 256
 Charpy V-notch impact test, wide-plate testing, 157, 160, 175
 Coarse-grain microstructure, wide-plate testing, 204
 Component testing, aluminum, 34
 Corrosion fatigue
 seawater, welded structural and high-strength steel, 78
 testing, welded tubular joints, 96
 Crack closure, ASTM A710 Grade A steel, 16
 Crack growth
 rates, ASTM A710 Grade A steel, 16
 tensile-shear spot weldments, 47
 welded tubular joints, 96
 Crack initiation, tensile-shear spot weldments, 47
 Crack opening, ASTM A710 Grade A steel, 16

Crack-opening displacement, fracture toughness test, post-weld heat treatment, 229
 Crack-tip opening displacement
 heat-affected zone, 117
 local brittle zone size, 143
 testing methods, 143
 underwater wet welds, 256
 weld heat-affected zone, 143
 wide-plate testing, 157, 160, 175, 204

E

Embrittlement, post-weld heat-treatment, 229

F

Fatigue testing, steel weldments, 3
 Flaws, underwater wet welds, 256
 Fracture mechanics modeling, 96
 Fracture toughness
 COD test, 229
 CTOD testing methods, 143
 heat-affected zone, 272
 manual metal-arc and submerged-arc welded joints, 272
 requirements, 157, 160, 175, 204
 underwater wet welds, 256
 weld heat-affected zones, 117

G

Grain boundary failure, post-weld heat treatment, 229

H

Heat-affected zone
 ASTM A710 Grade A steel, 16
 CTOD, 143
 fracture toughness, 272
 post-weld heat treatment, 229

Heat-affected zone (*cont.*)

structural steel, 117

wide-plate testing, 204

Heating rate, post-weld heat treatment, 229

Heterogeneity, 272

High-strength steel

corrosion in seawater, 78

wide-plate testing, 175, 204

I

Impact toughness, metal-arc and submerged-

arc welded joints, 272

J

J_{IC} , underwater wet welds, 256

L

Life prediction models, tensile-shear spot

weldments, 47

M

Metal-arc welded joints, fracture toughness,
272

N

Notch toughness, wide-plate testing, 160,
204

O

Offshore tubular joints, 96

P

Postweld coining, tensile-shear spot weld-
ments, 47

Postweld heat treatment

embrittlement, stress effect, 229

welded structural and high-strength steel,
78

R

Reporting, 3

Residual stress, 143

aluminum, 34

post-weld heat treatment, 229

welded structural and high-strength steel,
78

wide-plate testing, 157, 160, 175

S

Seawater, corrosion fatigue, welded struc-
tural and high-strength steel, 78

Service stress, realistic histories, 96

Specimens

design and fabrication, 3

size and fatigue performance, 34

Spot welds, low alloy, 47

Steel weldments, fatigue testing, 3

Stress, effect on post-weld heat-treatment
embrittlement, 229

Stress-intensity, ASTM A710 Grade A steel,
16

Stress ratio, welded structural and high-
strength steel, 78

Structural steel

corrosion in seawater, 78

heat-affected zone, 117

Submerged-arc welded joints, fracture
toughness, 272

T

Tensile-shear spot weldments, 47

Transverse fillet weld fatigue, aluminum, 34

U

Underwater wet welds, fracture toughness,
256

W

Wave action standard history, 96

Weak link, 117

Welded steel joints, 3

Welded tubular joints, corrosion fatigue test-
ing, 96

Weldments, aluminum, 34

Wide-plate testing, 157

crack-tip opening displacement, 157, 160,
175, 204

heat-affected zone, 204

historical aspects, 160

notch toughness, 160, 204
