

SYMPOSIUM ON PORCELAIN ENAMELS AND CERAMIC COATINGS AS ENGINEERING MATERIALS

Presented at the
FIFTY-SIXTH ANNUAL MEETING
AMERICAN SOCIETY FOR TESTING MATERIALS
Atlantic City, N. J., July 2, 1953

FOREWORD

The papers and discussions in this Symposium on Porcelain Enamels and Ceramic Coatings as Engineering Materials were presented at the Twenty-sixth and Twenty-eighth sessions of the Fifty-sixth Annual Meeting of the American Society for Testing Materials, held in Atlantic City, N. J., July 2, 1953. This symposium was sponsored by Committee C-22 on Porcelain Enamel.

Mr. Dwight G. Bennett, Research Professor of Ceramic Engineering, University of Illinois, acted as Chairman for the Twenty-sixth session while Mr. W. N. Harrison, Dept. of Commerce, National Bureau of Standards, presided over the Twenty-eighth session. Mr. Bennett was Chairman of a special symposium subcommittee consisting of Messrs. Ben J. Sweo and John T. Roberts and himself. This group conducted a very extensive survey of the industry for the purpose of eliciting suggestions for topics of most interest to the industry and for offers of papers. From a very substantial reply the final group of fifteen papers were selected for presentation.

NOTE.—The Society is not responsible, as a body, for the statements
and opinions advanced in this publication.

CONTENTS

	PAGE
Introduction—Dwight G. Bennett	1
Some Examples of the Functional Use of Porcelain Enamel and Ceramic Coatings for Steel—G. H. Spencer-Strong	3
Resistance of Porcelain Enamels to Weathering—Dwight G. Moore	10
Discussion	18
The Chemical Resistance of Glass Fused to Steel—E. A. Sanford and O. J. Britton . .	19
Discussion	25
Acid Resisting Properties of Porcelain Enamels—Harold C. Wilson	26
Requirements for and Expected Benefits from the Application of Coatings to High- Temperature Components of a Jet Engine—A. C. Francisco and G. M. Ault	29
Discussion	40
High-Temperature Ceramic Coatings as Applied to Aircraft Power Plants—B. L. Paris	42
Discussion	50
The Industrial Processing of High-Temperature Ceramic Coatings—J. H. Terry . . .	51
Discussion	59
The Abrasion Resistance of Various Types of Porcelain Enamel—Arthur V. Sharon . .	61
Discussion	69
The Resistance of Porcelain Enamels to Surface Abrasion as Determined by the PEI Test—John T. Roberts	70
Discussion	77
Torsion Testing as an Aid to the Porcelain Enamel Industry—E. L. Hoover	78
Discussion	86
The Strengthening Effect of Porcelain Enamel on Sheet Iron as Indicated by Bending Tests—E. E. Bryant	87
Discussion	92
Tension Tests of Porcelain Enameled Steel—W. A. Deringer	93
Discussion	98
Effect of Temperature on the Electrical Resistivity of Several Ceramic and Silicone- Type Coatings—Simon W. Strauss, Lloyd E. Richards, and Dwight G. Moore . .	101
A Laboratory Evaluation of Ceramic Coatings for High Temperature Applications— Sara J. Ketcham	109
Discussion	117
Guideposts in Selecting Porcelain Enamels and Ceramic Coatings—A Summary— W. N. Harrison	119

THIS PUBLICATION is one of many issued by the American Society for Testing Materials in connection with its work of promoting knowledge of the properties of materials and developing standard specifications and tests for materials. Over the years the Society has published many technical symposiums, reports, and special books. These may consist of a series of technical papers, reports by the A.S.T.M. technical committees, or compilations of data developed in special Society groups with many organizations co-operating. A list of A.S.T.M. publications and information on the work of the Society will be furnished on request.
