

Subject Index

A

Air oxidation, 563
 Anisotropy
 hydrogen impact, 399
 of plasticity, 303
 Annealing, 425
 parameter, 482
 Anodic protection, 623
 Axial splits, 316

B

Barrier layer, lithium in, 793
 β quenching, 756
 Boiling water reactor corrosion loop test, 735
 Boric acid, effect on oxidation kinetics, 793
 Boron, behavior in oxides on claddings, 773
 Burst tests, 356

C

Cathodic charging, 563
 Charpy energy, ultra-high-fluence, 139
 Charpy testing, degraded cladding, 316
 Chlorine, effect on microstructure, 3
 Chromium
 corrosion and, 623
 effects on Zircaloy, 609
 Cladding
 behavior under LOCA conditions, 256, 279
 cold pilgering, 460
 corrosion, 658
 second-phase particles and, 678
 degraded, fractography and fracture behavior, 316
 delayed hydride cracking, 340
 E110 alloy, 545
 hydrogen impact on plasticity and creep, 399
 hydrogen transport in oxide film, 901
 irradiation-induced damage, 377
 microstructure, low enthalpy failures and, 234
 simulated BWR corrosion loop test, 735
 unirradiated, texture and fracture toughness, 303
 water chemistry effect on oxidation kinetics, 793

Cold pilgering, 425
 process control, 460
 Corrosion
 composition and fabrication process effects, 505
 correlation with oxide film characteristics, 815
 dilute alloy addition effect, 525
 during irradiation, 756
 electron irradiated zirconium alloys, 709
 hydrogen and, 399, 836, 853
 iron, chromium and vanadium, 623
 irradiation damage, 15
 lithium and boron effect, 773
 long-time, transition element effects, 609
 mechanism, 623
 metal/oxide interface and, 918
 microstructure effect, 658
 second-phase particle effect, 678
 ultra-high-fluence, 139
 zirconium alloys, 3
 Corrosion loop test, BWR, 735
 Corrosion rate
 hydrogen and, 563
 tin and, 592
 Corrosion resistance, 623
 tubing, 425
 Crack growth
 irradiated Zircaloy cladding, 340
 resistance, initial crack size and, 356
 Creep
 activation temperature, 74
 composition and fabrication process effects, 505
 hydrogen impact, 399
 irradiation-induced, 51, 74
 under LOCA conditions, 256
 zirconium alloys, 3
 Crystal structure, tin and, 592

D

Deformation, irradiation-induced, 15, 74, 377
 Degradation, cladding, 316
 Deuterium pickup
 during irradiation, 756
 electron irradiation and, 709
 oxide, 853
 Diffusion, 641
 hydrogen in zirconium, 32

Dislocations
 electron irradiation, 709
 hydrogen impact, 399
 irradiation-induced, 15, 51, 641
 long-term effects, 105
 Dissolution, irradiation-induced, 658

E

E110 alloy, 545
 EDGAR methodology, 256
 Electrical potential gradient, oxide film, 836
 Electric conductivity, oxide film, 815
 Electric resistance, oxide film, 815
 Electrochemical characterization, corrosion mechanism, 623
 Electrochemical examinations, 836
 Electronic conductivity, oxide film, 815
 Electron irradiation, 709

F

Finite element method, 460
 Forge-quench-forge process, 482
 Fourier transform infrared spectroscopy, 853
 Fractography, degraded cladding, 316
 Fracture
 degraded cladding, 316
 long-term irradiation effects, 122
 Fracture toughness
 reduced, hydride reorientation and, 340
 texture effect, 303
 ultra-high-fluence, 139
 Fracture toughness testing, effects of size, geometry and material, 356

G

Gaseous charging, 563
 Grain size, 425

H

Hardening, hydrogen impact, 399
 Heat treatment, corrosion and, 658
 Heavy water, 563
 Hydride
 impact on plasticity and creep, 399
 layer, metal/oxide interface, 563
 orientation, 425

Hydride cracking
 delayed, 32
 irradiated Zircaloy cladding, 340
 long-term irradiation effects, 122
 fracture toughness and, 316
 ultra-high-fluence, 139
 Hydrogen
 corrosion rate and, 563
 impact on plasticity and creep, 399
 long-range migration, 196
 in oxide, 853
 stress-induced diffusion, 340
 terminal solid solubility, 173
 in zirconium, 32
 Hydrogen embrittlement, Zircaloy, 196
 Hydrogen ingress, 853
 and corrosion, 641
 Hydrogen uptake, 658
 corrosion and, 836
 during irradiation, 756
 by metal, 853
 metal/oxide interface, 918
 oxide film, 901
 second-phase particle effect, 678

I

Impedance, oxide film, 815
 Impurity content, properties and, 545
 In-PWR behavior, 505
 Intermetallic precipitates, 709
 hydrogen transport in oxide film, 901
 Iron
 concentration, long-term irradiation effects, 105
 corrosion and, 623
 dissolution rate, 658
 effects on Zircaloy, 609
 Irradiation
 corrosion and hydrogen uptake during, 756
 creep, 51
 damage, Zircaloy, 15
 deformation at high neutron fluences, 74
 delayed hydride cracking, 340
 long-term, effect on fracture, 122
 M5 alloy, 505
 Irradiation growth
 at high neutron fluences, 86
 long-term irradiation, 105
 temperature dependence, 86
 ultra-high-fluence, 139
 Irradiation hardening, 377
 ultra-high-fluence, 139

K

- Kinetics
 - alpha-beta phase transformation, 256
 - metal/oxide interface and, 918
 - water chemistry effect, 793
- Knoop microhardness test, ultra-high-fluence, 139

L

- Lithium, behavior in oxides on claddings, 773
- Lithium hydroxide, 877
 - effect on oxidation kinetics, 793
- Loss-of-coolant accident, 256, 279

M

- M5 alloy, out-of-pile and in-pile properties, 505
- Mechanical properties, irradiation damage, 15
- Metal/oxide interface
 - examination, 563
 - lithium concentrations, 773
 - multi-scale characterization, 918
- Microchemical composition, long-term irradiation effects, 105
- Microhardness, ultra-high-fluence, 139
- Microstructure
 - absence of irradiation, 3
 - cladding, low enthalpy failures and, 234
 - corrosion and, 641, 678
 - dilute alloy additions effect, 525
 - effect on corrosion behavior, 658
 - electron irradiation, 709
 - hydrogen ingress, 641
 - irradiation-induced changes, 51
 - long-term effects, 105
 - neutron irradiation effects, 15
 - phase condition and impurity content, 545
 - tin and, 592
- Modeling, cold pilgering, 460
- Molybdenum, dilute alloy additions and corrosion, 525
- Morphology, corrosion and, 623

N

- Neutron fluence, 74, 86
 - ultra-high, 139
- Neutron irradiation
 - compared with electron irradiation, 709

- neutron irradiation effects on
 - microstructure and properties, 15
- Nickel, dissolution rate, 658
- Niobium
 - corrosion and, 641
 - dilute alloy additions and corrosion, 525
- Nodular corrosion, 425
- Nuclear materials, irradiation-induced changes, 74
 - high-fluence growth, 86

O

- Oxidation
 - high-temperature, under LOCA, 279
 - metal/oxide interface and, 918
 - zirconia films, 877
- Oxide film, 592, 623, 773
 - correlation with corrosion performance, 815
 - electrical potential gradient, 836
 - electric resistance, 815
 - hydrogen transport, 901
 - lithium and boron behavior, 773, 793

P

- Phase transformation
 - alloy structure, 545
 - alpha-beta, 256, 482
- Plastic deformation model, 425
- Plasticity, hydrogen impact, 399
- Post-irradiation examination, 316, 340, 853
- Precipitates
 - E110 alloy, 545
 - growth, in-process investigation, 482
 - irradiation damage, 15
 - irradiation-induced, 51
 - long-term irradiation effects, 105
 - role in hydrogen transport, 901
 - ultra-high-fluence, 139
- Pre-oxidation, 756
- Pressure tubes
 - corrosion and hydrogen uptake during irradiation, 756
 - deformation, irradiation effects, 86
 - dislocation and precipitates, long-term irradiation effects, 105
 - effects of size, geometry and material in fracture toughness testing, 356
 - fracture, long-term irradiation effects, 122
 - high-fluence irradiation growth, 86
 - hydrogen in oxide and metal, 853

microstructural aspects, corrosion and
hydrogen ingress, 641
Primary light water, 563

Q

Quenching, 425

R

Raman spectroscopy, 877
Reactivity Initiated Accident simulation
testing, low enthalpy failures and
cladding microstructure, 234

S

Scanning electron microscopy, 918
Secondary ion mass spectrometry, 773, 853,
901
Second-phase particles, 658, 853
effect of dilute alloy additions, 525
impact on corrosion and hydriding
performance, 678
in-process investigation, 482
ultra-high-fluence, 139
Shear fracture, 356
Slant fracture, 356
Slip systems, 377
Solubility, terminal solid, hydrogen, 173
Strain, hydrogen impact, 399
Strain softening, 377
Stress, hydrogen impact, 399
Stress corrosion cracking, iodine-induced,
377
Stress distribution, zirconia films, 877
Stress gradients, tensile and compressive,
long-range migration of hydrogen,
196
Stress intensity threshold, 340
Sulfur, effect on creep, 3
Surface defects, 460

T

Tensile property, 425
ultra-high-fluence, 139
Texture, 3
effect on fracture toughness, 303
irradiation-induced changes, 74
tubing fabrication process, 425
ultra-high-fluence, 139
welding effects, 234

Thermal shock, 279
Thermomechanical processing, 482
Tin, corrosion rate and, 592
Tool optimization, 460
Tubing, new fabrication process, 425

V

Vanadium
corrosion and, 623
dilute alloy additions and corrosion, 525
effects on Zircaloy, 609

W

Water chemistry, 756
effect on oxidation kinetics, 793
Water reactors, long-range migration of
hydrogen, 196
Welding, effects on Zircaloy structure, 234

Z

Zircaloy
cladding
behavior under LOCA conditions, 256,
279
delayed hydride cracking, 340
cold pilgering, 460
corrosion and hydrogen uptake 836
during irradiation, 756
corrosion behavior, 658
correlation with oxide film
characteristics, 815
corrosion rate and tin, 592
electron irradiated, 709
hydrogen, 32
corrosion rate and, 563
impact on plasticity and creep, 399
migration, 196
transport in oxide film, 901
iron, vanadium, chromium effects, 609
low enthalpy failures and cladding
microstructure, 234
neutron irradiation effects on
microstructure and properties, 15
precipitate growth, in-process
investigation, 482
second-phase particles and corrosion, 678
simulated BWR corrosion loop test, 735
stress distribution in zirconia films, 877
terminal solid solubility of hydrogen, 173
tubing fabrication process, 425

- ultra-high-fluence, 139
- unirradiated cladding, texture and
 - fracture toughness, 303
- water chemistry effect on oxidation
 - kinetics, 793
- Zirconia
 - films, stress distribution, 877
 - oxidation kinetics, 793
- Zirconium
 - hydrogen in, 32
 - neutron irradiation effects on
 - microstructure and properties, 15
- Zirconium hydride, 32
- Zirconium oxide, 756
- Zirconium silicide, 853
- Zirconium-steam reaction, 279
