Foreword

The Symposium on Contributions of Basic Heat Transmission Measurements to the Design and Behavior of Thermal Insulation Systems was held at the American Society for Testing and Materials Headquarters in Philadelphia, Pa., on 16-17 April 1973. The symposium was sponsored by ASTM Committee C-16 on Thermal and Cryogenic Insulating Materials. R. P. Tye, Dynatech R/D Company, presided as the symposium chairman.

Contents

Introduction	1
Definitions and Thermal Modelling	
What Property Do We Measure— <i>ASTM Subcommittee C16.30</i>	5
Measurement Philosophy of Subcommittee C16-30	5
Heat Transfer	7
The Necessity of Multiple Measurements	9
Recommendations for Future Changes	11
Establishing Steady-State Thermal Conditions in Flat Slab Specimens— <i>C. J. Shirliffe</i>	13
Basic Problem	15
Common Factors in Models	15
Model Descriptions and Solutions	15
Simplification of Solutions	16
Truncation of Solutions	17
Inversion of the Solutions	22
Comparison of Settling Times	23
Accuracy of Equations	24
Conclusions	24
Mechanisms of Heat Transfer in Permeable Insulation and Their Investi- gation in a Special Guarded Hot Plate— <i>C. G. Bankvall</i>	34
Measurement of Heat Transfer	35
The Guarded Hot Plate	35
Heat Transfer Mechanisms in Fibrous Insulation	40
The Natural Convective Heat Transfer	43
Summary	48
Water Vapor Diffusion and Frost in Porous Materials— <i>A. Auracher</i>	49
Diffusion in Porous Frost-Containing Materials	50
Diffusion on Simple, Frost-Containing Pore Models	51
Diffusion in Frost-Containing Sphere Packings	61
Discussion	66
Conclusion	67
Radiative Contribution to the Thermal Conductivity of Fibrous Insula- tions— <i>R. M. F. Linford, R. J. Schmitt, and T. A. Hughes</i>	68
Nomenclature	69
Theoretical Models for Radiant Heat Transfer	70
Experimental Approach	75
Experimental Results	78
Calculation of the Radiation Transmission Component	82
Conclusions	83
Predicting Spacecraft Multilayer Insulation Performance from Heat Trans- fer Measurements— <i>L. D. Stimpson and W. A. Hagemeyer</i>	85
System-Level MLI Blanket Results	87
Types of Calorimeters Used	89
The JPL Test Program	90

Discussion of Future MLI Requirements	92
Conclusions	92

Techniques

Design Criteria for Guarded Hot Plate Apparatus— <i>F. De Ponte and P. Di Filippo</i>	97
The Guarded Hot Plate	99
The Cold Plate	109
Conclusions	116
Suitable Steady-State Methods for Measurement of Effective Thermal Conductivity in Rigid Insulations— <i>W. T. Engelke</i>	118
Comparative Rod Apparatus	120
Radial Inflow Apparatus	126
Application	129
Conclusions	133
Thermal Conductance of Pipe Insulation—A Large-Scale Test Apparatus— <i>L. R. Kimball</i>	135
Test Procedure	136
Selected Experimental Results	140
Discussion	142
Conclusions	146
New Development in Design of Equipment for Measuring Thermal Conductivity and Heat Flow— <i>E. Brendeng and P. E. Frivik</i>	147
Nomenclature	148
Steady-State Measurements	149
Test Results	156

Robinson Line-Heat-Source Guarded Hot Plate Apparatus— <i>M. H. Hahn, H. E. Robinson, and D. R. Flynn</i>	167
Mathematical Analysis of Line-Heat-Source Guarded Hot Plate	169
Design of Proposed Apparatus	185
Conclusion	191
Calibrated Hot Box: An Effective Means for Measuring Thermal Conductance in Large Wall Sections— <i>J. R. Mumaw</i>	193
Description of Test Apparatus	194
Construction of Test Apparatus	195
Hot Side Construction Details	196
Cold Side Construction Details	198
Specimen Frame Construction	199
Air Infiltration Test Capability	199
Obtaining Proper Test Results—The Data System	200
Hot Side Chamber Calibration	201
Testing Procedure	202
Discussion of Testing Results	203
Conclusions and Recommendations	211

Results and Applications

Improving the Thermal Performance of the Ordinary Concrete Block— <i>H. N. Knickle and Edgar Ducharme</i>	215
Procedure	216
Experimental Work	218

Economic Analysis	220
Conclusions	221
Some Recent Experimental Data on Glass Fiber Insulating Materials and Their Use for a Reliable Design of Insulations at Low Temperatures— <i>D. Fournier and S. Klarsfeld</i>	223
Theoretical Data	224
Measurements Facilities	227
Materials Investigated and Test Procedure	230
Experimental Results	231
Some Applications of Both Theoretical Results and Experimental Data to Design Actual Insulations at Low Temperatures	235
General Conclusion	240
Evacuated Load Bearing Thermal Insulation up to 800°C— <i>D. J. Dickson</i>	243
Procedure	245
Experimental Results	248
Discussion	250
Conclusions	253
Thermal Conductivity of Evacuated Glass Beads: Line Source Measurements in a Large Volume Bead Bed Between 225 and 300 K— <i>M. G. Langseth, F. E. Ruccia, and A. E. Wechsler</i>	256
Nomenclature	257
Bead Tank Conductivity Measurements Using a Line Source	259
Heat Flow Probe and Line Source Probe Comparisons	270
Conclusions	273
High Performance Thermal Insulation for an Implantable Artificial Heart— <i>D. R. Stoner, R. C. Svedberg, J. W. H. Chi, and T. Vojnovich</i>	275
Thermal Test Apparatus	277
Fabrication of Insulation Systems	280
Experimental Results	281
Discussion	285
Study of Thermophysical Properties of Constructional Materials in a Temperature Range from 10 to 400 K— <i>A. V. Luikov, A. G. Shashkov, L. L. Vasiliev, S. A. Tanaeva, Yu. P. Bolshakov, and L. S. Domorod</i>	290
Nomenclature	290
Experimental Procedure	292
Analysis and Measurement of the Heat Transmission of Multi-Component Insulation Panels for Thermal Protection of Cryogenic Liquid Storage Vessels— <i>J. G. Bourne and R. P. Tye</i>	297
Materials and Systems Evaluated	299
