Peer Review Policy

Each paper published in this volume was evaluated by two peer reviewers and at least one editor. The authors addressed all of the reviewers' comments to the satisfaction of both the technical editor(s) and the ASTM Committee on Publications.

The quality of the papers in this publication reflects not only the obvious efforts of the authors and the technical editor(s), but also the work of the peer reviewers. In keeping with long standing publication practices, ASTM maintains the anonymity of the peer reviewers. The ASTM Committee on Publications acknowledges with appreciation their dedication and contribution of time and effort on behalf of ASTM.

Printed in Philadelphia, PA January 2000

Foreword

The Symposium on *Time Dependent and Nonlinear Effects in Polymers and Composites* was held on May 4–5, 1998 in Atlanta, Georgia. ASTM Committee D-30 on Composite Materials sponsored the Symposium. Richard Schapery, the University of Texas at Austin, and C. T. Sun, Purdue University, presided as symposium co-chairmen and are editors of this publication.

Contents

Overview	vii
Polymers	
Mechanical Properties of Degraded PMR-15 Resin—L. C. TSUJI, H. L. McManus, and K. J. Bowles	3
Time Dependent Volume and Enthalpy Responses in Polymers— G. B. McKenna and S. L. Simon	18
Creep Behavior in Amorphous and Semicrystalline PEN—M. L. CERRADA AND G. B. MCKENNA	47
A Constitutive Model for Long-Term Behavior of Polymers—I. D. SKRYPNYK, J. L. SPOORMAKER, AND P. KANDACHAR	70
Implementation of Constitutive Model in FEA for Nonlinear Behavior of Plastics—I. D. SKRYPNYK, J. L. SPOORMAKER, AND W. SMIT	83
The Effect of Nonlinear Viscoelasticity on Interfacial Shear Strength Measurements—G. A. HOLMES, R. C. PETERSON, D. L. HUNSTON, W. G. MCDONOUGH, AND C. L. SCHUTTE	98
An Overstress Model for Solid Polymer Deformation Behavior Applied to Nylon 66—E. KREMPL AND KWANGSOO HO	118
Composites	
Aging During Elevated Temperature Stress Relaxation of IM7/K3B Composite—T. S. GATES, L. C. BRINSON, K. S. WHITLEY, AND T. BAI	141
Tensile and Compressive Creep of a Thermoplastic Polymer and the Effects of Physical Aging on the Composite Time-Dependent Behavior—D. R. VEAZIE AND T. S. GATES	160

Nonlinear Multiaxial Behavior and Failure of Fiber-Reinforced Composites— SC. HUNG AND K. M. LIECHTI	176
Nonlinear and Dynamic Compressive Behavior of Composites with Fiber Waviness—H. M. HSIAO AND I. M. DANIEL	223
Nonlinear Viscoelastic Behavior of Rubber-Toughened Carbon and Glass/ Epoxy Composites—R. T. BOCCHIERI AND R. A. SCHAPERY	238
A Viscoplasticity Model for Characterizing Loading and Unloading Behavior of Polymeric Composites—C. M. ZHU AND C. T. SUN	266
Durability and Damage Tolerance of a Polyimide Chopped Fiber Composite Subjected to Thermomechanical Fatigue Missions and Creep Loadings—M. G. CASTELLI, J. K. SUTTER, AND D. BENSON	285
Life Prediction of PPS Composites Subjected to Cyclic Loading at Elevated Temperatures—J. S. LOVERICH, B. E. RUSSELL, S. W. CASE, AND K. L. REIFSNIDER	310
Accelerated Strength Testing of Thermoplastic Composites—J. R. REEDER, D. H. ALLEN, AND W. L. BRADLEY	318
Hygrothermal Modeling of Polymers and Polymer Matrix Composites— SAMIT ROY	338
Hygrothermal Effects on Failure Mechanisms of Composite/Steel Bonded Joints—A. ROY, E. GONTCHAROVA-BÉNARD, JL. GACOUGNOLLE, AND P. DAVIES	353
Indexes	373

Overview

Polymeric composites exhibit appreciable time-dependent and nonlinear mechanical behavior in many structural applications. Improved fundamental understanding of and predictive models for this behavior over service lifetimes in realistic environments are needed for composites to gain wider acceptance and to achieve a significantly increased level of structural efficiency and reliability in commercial and military applications.

In advanced fibrous composites, the fiber phase is basically linearly elastic and shows little nonlinear and time-dependent behavior, if any. Thus, the nonelastic properties originate primarily from the matrix phase, including the polymer-fiber interphase zone. It is evident that to understand and to model the nonelastic behavior of composites, one must understand and be able to model this behavior in polymers.

Understanding the in situ behavior of the polymeric matrix and its interaction with fibers is an important part of developing improved predictive models. Because there is now a considerable amount of research activity worldwide on time-dependent and nonlinear effects in polymers and composites, it is desirable to describe and assess recent developments and their practical significance as well as to identify important unsolved fundamental problems. For these reasons, the two related disciplines, polymers and composites, were brought together at the *Symposium on Time-dependent and Nonlinear Effects in Polymers and Composites*. One of the main objectives of this symposium was to join the effort of specialists in these two disciplines to advance research in this important area of polymeric composites.

This volume contains eighteen papers presented at the Symposium. They are grouped under two subheadings, *Polymers* and *Composites*. Under *Polymers*, the primary topics are chemical and physical aging, nonlinear viscoelasticity and viscoplasticity. A number of topics are addressed by the papers under *Composites*, including the effect of physical aging on time-dependent behavior of composites, multiaxial nonlinear effects, compressive behavior, nonlinear viscoelasticity and viscoplasticity, failure and failure mechanisms, hygrothermal effects, durability, and accelerated strength testing.

We want to express our sincere thanks to all those who made the symposium and this STP possible. The excellent contributions of the authors, reviewers, presenters, session chairs, ASTM staff, and sponsoring technical committee are deeply appreciated.
