

Subject Index

A

Absorbed energy, 3, 134, 164,
181, 286
Accreditation procedures, 109
Acoustic emission, 354
Acrylonitrile-butadiene-styrene
plastic, 210
Aging, 210
stability, 100
American Petroleum Institute,
298
Anvil configurations, 164
Anvils, worn, 134
ASTM Committee E28 on
Mechanical Testing
E28.07.07
ASME lower-bound curve, 337
ASTM standards, 3
E 23, 223

B

Bend test, metals impact, 46
Bridges, impact test, 3
Brittle fracture load, 181
Bureau Communautaire de
Reference, 90
Butadiene
acrylonitrile-butadiene-styrene
plastic, 210

C

Calibration, 100
characterization of calibrated
batches, 109
dynamic force, 253
load, 198
Casing, American Petroleum
Institute Specification for
Casing and Tubing, 298
Charpy fracture energy, 337
Charpy impact testing, 210, 310
history, 3, 17, 46
instrumented, 198, 253, 327

Charpy specimen certification,
73, 90
Charpy testing, 286, 354, 382
Charpy type specimen, 267
Charpy v-notch, 100, 134, 298
specimens, 109, 242, 267,
286, 366
specimens, miniaturized, 223
specimens, subsize, 146
testing machines, 134
Clamping pressure, 210
Cleavage, 327
COFRAC, 109
Computer Aided Instrumented
Impact Testing System,
198
Crack extension, 327
Crack growth initiation, 327
Crack initiation, ductile, 354
Crack resistance curve, 327
Crack tip opening displacement,
267
C-type impact machine, 100
Curvature, specimen, 298

D

Deconvolution, 253
Dual energy determination, 181
Ductile-brittle transition, 310
Ductile crack initiation, 354
Ductile-to-brittle transition
range, 337
Ductility, 181

E

Elastic resilience, 17
Electron beam weld, 310
Energy, absorbed, 3, 134, 164,
181, 286
Energy curve shift, 146
Energy divergence, 100
Energy/lateral expansion/shear
fracture levels, 146
Energy levels, 164
Energy, variation, 73

European standards, 90, 109, 242
European Structural Integrity
Society, 242

F

Failure, metal resistance to, 46
Finite element analysis, 198
Force-deflection-diagram, 267
Force displacement trace, 382
Fracture path, 310
Fracture toughness, 198, 267,
327, 337
dynamic, 354, 366
impact, 253
French Accreditation
Committee, 109
French standards NFA 03-508,
109
French Steel Federation, 109

H

Heat loss, 286
History, impact test, 3, 17

I

Impact response curve method,
366
Institute for Reference Materials
and Measurements, 73, 90
Instrumented impact testing,
223, 242, 366
correlation procedures, 146
fracture toughness, 253
history, 3, 17
load signal, 198
single specimen methods, 327
Instrumented/Miniaturized
Charpy Round Robin
Test Program, 223
Interlaboratory comparison, 210,
223, 242, 327
for certification, 90
international, 73
International Organization for
Standardization
striker, 100
Izod impact testing, 210

J

Japanese V-notch reference test
specimens, 164
J-integral, 354
 J_R curve, 327
J-resistance curve, 327

K

Key-curve method, 327

L

Laboratoire National D'Essais,
73
Linear least square, 382
Liquid bath transfer approach,
286
Load, 17, 253
calibration, load signal, 198
load vs. displacement curve,
354
Loading rates, 267, 366
Loading velocity, 337

M

Magnetic emission
measurement, 366
Metals impact bend test, 46
Microstructure analysis, 100
Miniaturized Charpy testing,
223
Misalignment, 134

N

National Institute of Standards
and Technology, 73, 223
Nickel-based alloy, 100
Nil-ductility transition, 382
Normalization factors, 146
Notched bars, 46
Notch sharpness, 337
NRLM, 73

O

Oak Ridge National Laboratory,
223, 382
Optical encoder, 181

Optical measurement,
simultaneous, 354

P

Peak load, 181
Plastic
acrylonitrile-butadiene-
styrene, 210
Plastic impact specimens, 210
PMMA, 253
Polymethyl methacrylate, 253
Pressure vessels, impact tests, 3

R

Railway bridges, 17
Reactor pressure vessel, 146,
223, 382
Reference materials, 73, 90
Reference test pieces, 109, 164
Resilience, elastic, 17

S

Scatter, 310
SCK-CEN, 146
Stability analysis, 100
Steel, 146, 267, 366
4340, 73, 90, 298
A533B, 223
French steel accreditation,
109
high strength, 310
reactor pressure vessel, 146,
382
Strain localization, 198
Strain rates, 242
Stress, change of, 17
Stress intensity factor, 366
dynamic, 253
Stretch zone width, 354
Strikers, 90
instrumented, 164, 181, 198,
223, 286, 298
Structural performance,
correlation to impact
testing, 3
Styrene
acrylonitrile-butadiene-
styrene plastic, 210

T

Tensile strength, 337
ultimate, 242
Thermal conditioning, 286
Thermocouples, 286
Toughness, 90, 209
fracture, 198
Transition behavior, 267
Transition region, 223, 337
Transition temperature, 267, 310
Tubes, high strength steel, 298

U

Uncertainty propagation, 164
Upper shelf energy, 146, 223, 310

V

Velocity, impact, 267
Verification testing, 90, 134
interlaboratory comparison,
73, 242, 327
pendulum impact testing
machines, 109
plastic impact, 210
programs, 73, 223, 242
specimens, plastic impact, 210
Vibration, impact testing, 134
effect removal, 253

W

Wear, impact testing, 134
Weibull statistics, 382
Weld, 310
W-Nr 1.4563, 100
Worn anvils, 134

Y

Yield load, 181
Yield strength, 242
