Subject Index

A

AA 2024-T3, metastable pitting, 307
Absorption, hydrogen, effect on electrochemical potential noise, 375
Acoustic emission, coupling with electrochemical current noise, 361
Alloy heat exchangers, corrosion resistance, 266
Aluminum
  corrosion, electrochemical noise, 142
  exfoliation, electrochemical noise measurements, 398
  metastable pitting, 307
Aluminum-lithium alloy, exfoliation, 398
ASTM G 34, 398
ASTM standardization, electrochemical noise measurement, 446
Atmospheric corrosion, 411

B

Bubble, hydrogen, electrode potential and electrolyte resistance, 375

C

Capacitance, role in corrosion potential during metastable pitting, 343
Carbon steel
  corrosion resistance, effects of zebra mussel attachment, 186
  electrochemical noise measurements in high subcritical and supercritical aqueous environments, 247
  nuclear waste tanks, 201
  prerusted, characterization in Ibero-American atmospheres, 411
  stress corrosion cracking, 214
Chaotic analysis, 129
Coatings, 3
  electrochemical noise and impedance, 59
  reproducibility of electrochemical noise data, 427
CO—CO_2—H_2O systems, on-line monitoring, 214
Concrete, reinforced, electrochemical noise and electrochemical impedance spectroscopy, 39
Constituent particles, 307
Cooling water systems, corrosion and fouling monitoring, 230
Copper-depleted zones, metastable aluminum, 307
Corrosion
  ASTM standardization of electrochemical noise measurement, 446
  electrochemical noise under hydrodynamic conditions, 387
  high subcritical and supercritical aqueous environments, 247
  hydrogen absorption effect on electrochemical potential noise, 375
  localized (*see* Localized corrosion)
  online evaluation, 173
  reproducibility of electrochemical noise data, 427
  uniform (*see* Uniform corrosion)
Corrosion monitoring, 186
  heat transfer in cooling water systems, 230
  in-situ technique, 3
  nuclear waste tanks, 201
  steam generators, 288
Corrosion rate measurement
  electrochemical noise measurement, 79
  solution resistance effects on electrochemical noise resistance, 93
Corrosion resistance, effects of zebra mussel attachment, 186
Coupling current, 186
  metastable pitting in aluminum, 307
Crevice corrosion
  identification using artificial neural network, 157
  steam generator materials, 288

D

Data analysis techniques, 114
Degree of localization, 186
  nuclear heat exchanger tubes, 266
  steam generator materials, 288
Depassivation, 142
Diffusion, 387

E

Electric Power Research Institute, review of projects since 1984, 173
Electrochemical current noise, 114, 186
  coupling with acoustic emission, 361
  metastable pitting in aluminum, 307
  steam generator materials, 288

Electrochemical current noise—*continued*
steel under hydrodynamic conditions, 387
Electrochemical impedance spectroscopy, 142
comparison with electrochemical noise measurements, 39
exfoliation of aluminum alloys, 398
iron in chloride media, 59
Electrochemical noise
analysis, iron in chloride media, 59
corrosion resistance, nuclear heat exchanger tubes, 266
identification using artificial neural network, 157
impedance, 3
in-situ technique, 3
metastable pitting, 307
reproducibility of data from coated metal systems, 427
spontaneous, 142
stainless steel in chloride solutions, 101
steel under hydrodynamic conditions, 387
use in investigating effects of zebra mussel attachment, 186
Electrochemical noise measurement
ASTM standardization, 446
comparison of spectral and chaotic analysis, 129
comparison with impedance spectroscopy, 39
corrosion rate determination, 79
during exfoliation of aluminum alloys, 398
effect of metallurgical factors, 332
evaluation of steam generator materials, 288
nuclear waste tanks, 201
on-line monitoring, 214
potentiostatic, 114
prerusted steel, characterization in Ibero-American atmospheres, 411
simultaneous corrosion and fouling monitoring, 230
steels in high subcritical and supercritical aqueous environments, 247
stochastic behavior, 142
Electrochemical noise resistance, solution resistance effects, 93
Electrochemical potential noise, 79, 186
metastable pitting in aluminum, 307
nuclear heat exchanger tubes, 266
nuclear waste tanks, 201
steam generator materials, 288
steel under hydrodynamic conditions, 387
Electrochemical tests, standardization, 446
Electrolyte resistance, 375
EXCO test, 398
Exfoliation corrosion, electrochemical noise measurements
aluminum, 398
aluminum alloys, 398

F

Fast Fourier transform, comparison with spectral analysis using maximum entropy method, 114
Forced convection, 387
Fouling monitoring, heat transfer in cooling water systems, 230
Fractal analysis, 129

G

Galvanostatic electrochemical noise measurement, 375

H

Heat exchangers, corrosion and fouling monitoring, 230
Heat tint, 343
Hydrogen, absorption effect on electrochemical potential noise, 375

I

Impedance, interfacial, 3
Impedance spectroscopy
comparison with electrochemical noise measurements, 39
iron in chloride media, 59
Inclusions, 332
Inhibitor, 59
corrosion, 201
Instrumentation, electrochemical noise, 173
Intergranular corrosion
aluminum alloys, 398
nuclear heat exchanger tubes, 266
Iron, in chloride media, electrochemical noise and impedance analysis, 59
Iron electrode, hydrogen absorption effect on electrochemical potential noise, 375

L

Laboratory testing, standardization, 446
Linear circuit model, 93
Linear polarization resistance, 79
Localized corrosion
  heat exchangers, 230
  in-situ measurement, 3
  molybdenum implantation role, stainless steel, 114
  particle impacts, 361

M

Manganese sulfide, effect on electrochemical noise, 332
Marine coatings, reproducibility of electrochemical noise data, 427
Mass loss measurements, 79
Maximum entropy method
  comparison with spectral analysis using fast Fourier transform, 114
  metastable aluminum, 307
Metallurgical factors, effect on electrochemical noise, 332
MICAT project, 411
Microstructure, nuclear heat exchanger tubes, 266
Molybdenum, implantation and localized corrosion on stainless steel, 114
Monitoring, corrosion and fouling, 230
Multilayer feedforward network, 157

N

Neural network, artificial, pitting and crevice corrosion, spectra identification, 157
Nitrates, pitting induction, 201
Noise resistance, 79
  iron in chloride media, 59
  metastable aluminum, 307
Nuclear heat exchanger tubes
  corrosion resistance, 266
Nuclear power, steam generator materials, 288
Nuclear waste tanks, electrochemical noise measurements, 201

O

Oil industry, stress corrosion cracking, on-line monitoring, 214
On-line monitoring, stress corrosion cracking, 214
Oxides, 411

P

Permeation, electrochemical, 375
Pit stabilization factor, 307
Pitting, 3
  effect of metallurgical factors, 332
  heat exchangers, 230
  high subcritical and supercritical aqueous environments, 247
  identification using artificial neural network, 157
  metastable, 307, 332, 343
  nuclear heat exchanger tubes, 266
  nuclear waste tanks, 201
  stainless steel, 101, 114, 343
Polarization resistance
  iron in chloride media, 59
  stainless steel in chloride solutions, 101
Polymer coatings, electrochemical noise and impedance, 59
Potentiostatic electrochemical noise measurement, 114, 332
Power spectral density, 114, 129
  exfoliation of aluminum alloys, 398
  metastable aluminum, 307
  slurry erosion-corrosion studies, 361

R

Repassivation, 307
Reproducibility, of data, 427
Resistance noise, 186
  steam generator materials, 288
Rotating disk electrode, 387

S

Shot noise model, 93
Slurry erosion-corrosion studies, coupling of acoustic emission and electrochemical current noise, 361
Solution resistance, effects on electrochemical noise resistance, 93
S' particles, 307
Spectral analysis, 129
  comparison of fast Fourier transform and maximum entropy method, 114
Spectral noise resistance, iron in chloride media, 59
Stainless steel
  in chloride solution, metallurgical factor effect on electrochemical noise, 332

Stainless steel–*continued*
in chloride solutions, electrochemical noise, 101
corrosion identification using artificial neural network, 157
corrosion resistance, effects of zebra mussel attachment, 186
electrochemical noise measurements in high subcritical and supercritical aqueous environments, 247
localized corrosion, molybdenum implantation role, 114
nuclear waste tanks, 201
pitting corrosion, 343
Steam generators
corrosion monitoring, 288
corrosion resistance, 266
Steel
electrochemical noise under hydrodynamic conditions, 387 (*see also* Carbon steel)
Stochastic behavior, electrochemical noise measurement, 142
Stress corrosion cracking, 3
high subcritical and supercritical aqueous environments, 247
on-line monitoring, 214
Sulfate-reducing bacteria, 186
Sulfuric acid, 375
slurry erosion-corrosion studies, 361
Supercritical aqueous system, 247
Surveillance instrumentation, corrosion, 173

T

Technology demonstrations, 173
Test standards, 446
Time analysis, slurry erosion-corrosion studies, 361
Titanium, effect on electrochemical noise, 332
Twin-electrode probe, 343

U

Underdeposit corrosion, 230
heat exchangers, 266
Uniform corrosion
in-situ measurement, 3
stainless steel in chloride solutions, 101
UNS N 04400, 266

Z

Zebra mussels, effects on corrosion resistance, 186
