

Index

A

Abrasion tests, 10, 77–85, 93
 Armstrong abrasion, 95, 97, 98
 Mar resistance, 78, 117
 Performance predictions (*see*
 Physical testing)
 Soft-hair wheelbrush, 79–80, 117
 Spherical stylus scratch, 79, 85
 Taber abrasion, 79
 Abrasive wear (*see* Wear
 mechanisms)
 ANSI test procedures, 80, 82, 85

B

Boundary conditions, 1, 7, 9, 10,
 11, 13, 59, 114, 116, 118
 Definition, 6
 Geometry, 21, 95
 Thickness, 7, 9, 59, 72–73, 76,
 107–108, 117
 Topography, 92, 93, 94, 98

C

Chemical wear (*see* Wear
 mechanisms)
 Component tests
 Definition, 8, 114
 Examples, 11, 29–30, 57–58, 70,
 72, 104, 106
 Creep, 12, 110, 112

D

Data presentation, 13, 108, 118

Typical property tables, 1, 13,
 102, 103, 105, 111, 113, 114
 Deformation wear (*see* Wear
 mechanisms)
 Design requirements, 1, 103, 105,
 110, 112, 117
 Design technology, 109, 110, 111,
 118
 Role of ASTM, 112–113, 119
 Ductile-brittle transitions, 22–29,
 60, 64–70, 74, 116

E

Environments
 Effects of, 1, 3, 5, 7, 12, 16, 59,
 63, 64–70, 76, 92, 95, 105,
 114
 Inclusion in material evaluation,
 13, 103, 104, 117, 118
 Excitation functions (*see* Input/
 output functions)

F

Fabrication influences, 4, 7, 19,
 22–29, 56, 59, 70–72, 102,
 104, 105, 117
 Fatigue testing, 32–44, 115
 Cyclic, 32, 35, 36
 Performance predictions (*see*
 Physical testing)
 Static, 32, 35, 38
 Prot method, 41, 42, 43
 Fatigue wear (*see* Wear
 mechanisms)

FDA, 103

Fracture toughness, 16, 19–20, 30

Crack opening displacement, 17,
18, 19, 20, 21

Experimental methods, 16–17,
114, 115

Performance predictions (*see*
Physical testing)

Stress intensity factor, 17, 21

Validity conditions, 18, 20, 30

Friction testing, 80–85

Paper clip friction test, 84, 85,
87, 88, 89, 90, 117

Performance prediction (*see*
Physical testing)

Point contact friction test, 81–83,
84, 88, 117

Sled friction test, 80, 84, 85, 117

Fundamental tests

Definition, 7, 114

Examples, 8, 10–11, 16, 41, 115,
118

H

Heat resistance (*see* Environments)

Hybrid tests

Comparison with practical tests,
10

Definition, 9–10, 114

Examples, 10, 11, 13, 78, 79, 117,
118

I

Impact testing

Charpy, 46, 51, 57, 116

Falling weight, 53, 56, 57, 60, 61

Gardner, 61, 116

Instrumented, 46, 116

Advantages, 45–46, 54

Applications, 49, 53

Incipient damage, 52–53, 116

Instrumentation, 46–49, 60–61

Izod, 7, 9, 10, 11, 12, 46, 57, 116

Performance predictions (*see*
Physical testing)

Special impact tests, 107

Input/output functions, 1, 6–7, 11,
13, 92, 98, 114, 118

Shape and amplitude, 6, 115, 119

Interfacial wear (*see* Wear
mechanisms)

L

Load-deformation curves, 19–20,
47–49, 51–52, 54–56, 62–63

M

Material evaluation guidelines

General evaluation, 13

Known application, 12–13

Mechanical spectrometry, 7, 118,
119

Microprocessors, 119

O

Optical haze

Light transmission, 103

Measurement of abrasion, 78, 79,
80, 81

P

Performance requirements (*see* De-
sign requirements)

Physical testing

Correlation with end-use perfor-
mance, 1, 4, 12–13, 29–30,
35, 43, 44, 50–53, 57–58, 78,
80, 81, 83–85, 88, 90, 91, 92,
95–96, 98–99, 104, 105–107,
114, 115, 116, 117, 118, 119

Definition of, 6–7, 114

Nonstandard methods

Assessment, 79, 81, 84–85, 88,
107

Rationale, 3, 119

Reasons for testing, 3-4, 77
 Relevancy, 12, 77, 78, 85, 88, 91,
 114, 115, 119
 Standard methods
 Assessment, 11-12, 30, 35, 53,
 55, 60, 77-79, 80, 84, 90, 95,
 98-99, 103-104, 107, 108,
 111, 112, 115, 118
 Comparison, 8-11
 Types of methods, 7-10, 45,
 114

Practical tests
 Definition, 9, 114
 Examples, 9, 11, 36, 45, 79, 81,
 88, 98, 99, 107-108, 117

Processing (*see* Fabrication
 influences)

R

Rate effects, 21-22, 97, 98
 Response functions (*see* Input/
 output functions)

S

Scratch tests (*see* Abrasion tests)
 Stress analysis, 111
 Stress rupture (*see* Fatigue, static)
 Systems analysis (*see* Input/output
 functions)

T

Temperature (*see* Environment)
 Temperature measurement, 61
 Time
 Effects of, 1, 3, 6
 Inclusion in material evaluation,
 13, 103
 Long-term strength, 41, 44,
 115-116

U

Underwriters Laboratories, 105,
 107

V

Viscoelasticity 6, 110-111, 119
 Strength of materials, 110
 Stress-strain properties, 110

W

Wear
 Mechanisms, 91, 92, 93, 94, 95,
 98-99, 118
 Performance predictions (*see*
 Physical testing)
 PV factor, 96, 97, 98, 118
 Specific wear rate, 96
 Thrust-washer tester, 96
 Wear testing, 91, 92, 95-97, 117
 Wohler method, 41
