

Subject Index

A

- AC impedance
 - as compared to *R_p* system, 43
 - of reinforcements obtained through a spectrum analyzer, 43
- Additives on concrete for the protection of rebars induced defects, 119
 - in lab, 120
 - in seawater, 127
 - protective properties, table, 119
- SIMAC, 118
- Terra Theraic, 118
- with anodic charge, 127
- with needle-diodes, 126
- with/without cathodic protection, 122
- Anodic polarization
 - cathodic reaction, 78
 - chlorides effect on anodic behavior, 83
 - curve of steel in deaerated calcium hydroxide, 79
 - pitting corrosion, 78
 - potentiostatic polarization, table, 87
 - to determine effectiveness of calcium nitrate as an anodic inhibitor, 78
 - with reverse scan, 78
- ASTM Committee G-1, 1
- ASTM Subcommittee G1.14, 1, 131

B

- Barneybeck and Diamond pore solution press, 8

C

- Carbonation, 5
- Cathodic protection, 17, 32
- Cement types, 9
- Chloride ions
 - affect on corrosion severity, 5, 79
 - calcium chloride, 5
 - origins, 7
 - permeability of concrete to, 64
 - seawater exposure, 5
 - sodium chloride, 5
- Corrosion intensity, 43
- Corrosion of steel in concrete
 - anode curve, 79
 - cathodic protection, 17, 31
 - financial impact, 6
 - importance to U.S. transportation system, 5
 - in portland cement concrete, causes, 5
 - rate by AC impedance methods, 43
 - rate by polarization resistance, 43
 - steel wire, 92
 - stray current effects, 12, 64
 - to pitting, 78, 92

D

- Deicing salts
 - auto parking garage deterioration, 5
 - bridge deck deterioration, 5

E

- Electrolytic stray current corrosion, 92
- Electron probe micro-analysis (EPMA), 109

G-L

- Galvanic stray current corrosion, 92
- Lightning conductors
 - atmospheric charges, 17
 - connection to concrete rebars, 17

M-N

- Macro-cell corrosion, 6
- Needle-diode system, sub-soil
 - effectiveness, 17
 - influence of flow types/velocity, 17
 - seasonal fluctuations, 17
 - seasonal fluctuation, table, 17
 - system diagrams, 18, 19

O

- Ohmic drop, 43
- Oxygen content factor on corrosion, 11

P

- Pitting
 - as a type of corrosion, 7, 28, 78, 92
- Polarization curves, 44
- Polarization resistance R_p (DC)
 - and AC system, 43
 - corrosion rate of steel bars imbedded in concrete, 43
 - comparison with weight losses, 43
- Polymeric anodemesh, above ground components, installation, 32
 - reference electrodes
 - molybdenum/molybdenum tri-oxide, 32
 - zinc/zinc sulphate, 32
- Pore solution composition
 - affect on permeability, 10
 - current density, 5
 - influence on corrosion, 9
 - resistivity, 5
- Portland cements, 5, 94
- Prestressed concrete cylinder pipe (*See* PCCP)

- construction/illus., 93, 94, 95, 97
- corrosion detection, 92
- excavations, 92
- potential profiles
 - cell-to-cell, illustration, 102, 103
 - pipe-to-soil, illustration, 99, 101
- steel wire in, 92
- surveying techniques of, 104

R

- Reinforced earth systems
 - aluminum alloys, 64
 - concrete chloride analysis, table, 71
 - corrosion susceptibility in corrosive environments, 64
 - precast concrete, 64
 - reinforcing steel, 64
 - soil stabilization, 64
 - stray current detection, 64
 - structural system, illustration, 65
 - worldwide use, 65
 - zinc coatings, 64
- Reinforced steel, 31, 64

S

- Steel in concrete
 - passivity, 5
 - surrounding compositions effect on, 8
- Stray current corrosion
 - accelerated rebar, 15
 - alkaline, 78
 - cathodic protection, 17, 32
 - deicing salt affect, 5
 - determining rate of, 43
 - early detection of, 43
 - galvanic, 92
 - of prestressed concrete cylinder pipe, 92
 - of steel in portland cement concrete, 5
 - pitting, 7, 28, 78, 92

susceptibility of metallic elements in
reinforced earth system, 64
underground, 64
X-ray permeability, 108
Stray current electrolysis, 92
Stray current testing, 64
Stress corrosion cracking, 98

X

X-ray
corrosion rate of rebars, 108
prediction of concrete cracking, 108
permeability, 108
solid state diffusion of Fe^{2+} , 108
