Subject Index

3D imaging, 126-146
 100Cr6, 312-348, 410-420, 538-549
 100CrMnSi6-4 bearing steel, 389-409
 52100, 538-549

A

accelerated carbide spheroidiation, 371-388
 accelerated carbide spheroidization, 389-409
 adiabatic shear band (ASB), 487-508
 aerospace, 259-271
 air melt, 3-15
 aircraft engines, 525-537
 AISI 52100, 410-420
 annealing, 389-409
 artificial defect, 147-172
 austempering, 421-443

B

bainite, 410-420
 bearing, 349-368
 bearings, 189-209
 bearing steel, 3-15, 16-26, 27-53, 54-80, 83-99, 100-115, 173-185, 210-238, 259-271, 312-348, 371-388, 421-443, 509-522, 525-537, 538-549
 bearing steel 52100, 590-601

C

C56, 564-589
 C56E2, 538-549
 carbonitriding, 312-348
 carburised m50nil, 525-537
 carburizing, 421-443
 cleanliness, 116-125

cleanliness, 3-15
 computational thermodynamics, 16-26
 concept bearing steel, 291-311
 contact conditions at the interface, 173-185
 contaminated lubrication, 312-348
 controlled rolling, 371-388
 corrosion resistance, 239-258, 444-464, 465-484
 crack initiation, 147-172
 crack propagation, 147-172
 CRONIDUR 30, 239-258
 CX13VDW, 239-258

D

damage mechanisms, 525-537
 development, 27-53
 dilatometry, 291-311
 dimensional stability, 312-348

E

equilibrium, 16-26
 ESR, 3-15

F

FB2 test, 538-549
 fatigue, 100-115, 189-209, 349-368
 fatigue behavior, 421-443
 FIB tomography, 126-146
 flaking, 272-290

G

gas atomization, 349-368

H

hardening, 389-409

heat treatment, 291-311
 high contact pressure, 210-238
 high speed steel, 349-368
 high-toughness steel, 210-238
 hot hardness, 239-258
 hot isostatic pressing, 349-368
 hydrogen, 487-508
 hypo eutecoid, 564-589

I

incipient cleavage cracks, 487-508
 inclusion, 3-15
 inclusions, 116-125
 induction hardening, 509-522

L

large size bearing, 509-522
 low friction, 210-238

M

M50, 259-271
 M50NiL, 259-271
 macroinclusion, 3-15
 martensitic steel, 189-209
 material response, 564-589
 mechanical twinning, 525-537
 micro inclusion, 27-53
 microcleanliness, 83-99
 microinclusion, 3-15
 microsegregation, 54-80
 microstructure, 525-537, 550-563
 molybdenum, 210-238

N

nitriding, 259-271
 non-metallic inclusions, 100-115,
 126-146, 173-185, 538-549

P

phase transformations, 550-563
 plasma nitriding, 444-464
 powder metallurgy, 291-311, 349-368
 probabilistic analysis, 421-443
 processing, 54-80
 pyrowear 675, 465-484
 PYROWEAR 675, 239-258

Q

quality assurance, 509-522

R

remelt, 3-15
 residual stress, 590-601
 retained austenite, 312-348
 rolling bearing, 272-290
 rolling contact fatigue (RCF),
 487-508
 rolling contact fatigue life, 173-185
 rolling contact fatigue testing, 259-271
 rolling contact fatigue, 83-99,
 100-115, 147-172, 210-238, 421-443,
 525-537, 538-549, 550-563
 rolling element bearing, 444-464,
 465-484

S

SAE 52100, 312-348
 silicon, 189-209, 210-238
 slip rolling, 210-238
 steel cleanliness, 509-522
 steelmaking technologies, 27-53
 strain localisation, 525-537
 sulfur, 83-99
 surface roughness, 272-290
 surface tangential force, 272-290
 synchrotron radiation, 590-601

T

TEM, 291-311
 test rig, 564-589
 thermo mechanical treatment, 371-388
 thermo-calc, 16-26
 top slag, 16-26

U

ultrasonic testing, 116-125

V

VAR, 3-15

W

white etching cracks (WECs),
 487-508
 white etching phase transformation,
 487-508
 white structure flaking (WSF),
 487-508
 wind energy, 509-522

X

x-ray diffraction, 590-601
 XD15NW, 239-258
