

# Index

## A

- Amino acid analysis, 151
- Analytical selectivity
  - fiber optics, 88
- Analytical spectroscopy, 88
- Analytical techniques
  - combustion diagnostics, 50
  - DNA adducts, 69
  - fiber-optic-based selectivity, 88
  - fluorescence in criminalistics, 36
  - laser fluorescence fingerprints—environmental materials, 3
  - laser photolytic fragmentation—organic and organometallic molecules, 123
  - photolytic fragmentation
  - tetracene in cryogenic matrixes, 75
  - tetracene in 1-*n*-dodecanol, 96
  - two-photon spectroscopy—inorganic solids, 21
- Anisotropy (polarization)
  - fiber-optic selectivity, 88
  - tetracene measurement
- Adducts, 69
- Air particulates, 3
- Analytical chemistry
  - detection methods, 75
- Analytical methods (*see* Fluorescence, Lasers, Luminescence, and Spectroscopy)
- Atoms—combustion analysis, 50

## C

- Calciumoxide (CaO), 144
- Capillary electrophoresis (*see also* Luminescence spectroscopy)
  - subattomole amino acid analysis, 151
- Carcinogenesis initiation
  - polycyclic aromatic hydrocarbons(PAH), 69
- Carcinogens, 69
- Chemical analysis (*see also* Analytical techniques)
  - dynamic fluorescence spectroscopy, 89
  - thermal lensing, 108

- Combustion analysis, 50
- Communications—fiber-optic sensing, 88
- Continuous wave (cw/helium-cadmium)
  - laser fluorescence system
  - analysis of environmental materials, 3
- Criminalistics, 36

## D

- Debye-Stokes-Einstein (DSE) model of rotational diffusion, 96
- Decay measurement, 88
- Defect equilibria—materials science, 144
- Deoxyribonucleic acid (DNA) adducts
  - fluorescence spectroscopy analysis, 69–73
- DNA (*see* Deoxyribonucleic acid)
- 1-*n*-dodecanol
  - tetracene anisotropy measurement, 96
- Dynamic fluorescence spectroscopy
  - fiber-optic-based selectivity, 88

## E

- Electrophoresis—amino acid analysis, 151
- Electrothermal atomizers
  - in study of ultraviolet absorption, 3
- Emission spectroscopy, 133
- Energy-selection technique, 133
- Environmental materials
  - analytical methods, 3

## F

- Fiber-optic sensing
  - chemical analysis, 88
- Fingerprinting—analytical technique (*see also* Laser fluorescence)
  - environmental materials, 3
- Fingerprints (criminalistics)
  - fluorescence detection, 37
  - laser detection, 36
- Flame analysis, 50–51
- Flashlamp dye laser (*see* Pulse-gated laser)
- FLNS (*see* Fluorescence spectroscopy)
- Fluorescein isothiocyanate, 151

- Fluorescence anisotropy
  - tetracene decay, 96–98
- Fluorescence line narrowing spectroscopy (FLNS) (*see* Fluorescence spectroscopy)
- Fluorescence spectroscopy
  - amino acid analysis, 151
  - criminalistics, 36
  - combustion diagnostics, 50
  - DNA adducts, 69–71
  - fiber-optic-based selectivity, 88
  - materials science, 144
  - nonfluorescent organic and organometallic molecules, 123
  - photolytic fragmentation, 123
  - solid substrates, 133
  - thermal lensing, 108
  - tetracene spectra, 75
- Fragmentation fluorescence spectrometry, 123
- Frequency-domain spectroscopy, 88

## H

- High resolution fluorescence spectroscopy (*see also* Luminescence spectroscopy)
  - solid substrates, 133
- tetracene, 75
- Hydrophobic/hydrophilic compounds
  - thermal lens enhancement, 108

## I

- Ignition—combustion analysis, 50
- Imaging in criminalistics
  - laser excitation, 36
- Inorganic crystals
  - two-photon spectroscopy, 21
- Inorganic solids
  - analytical methods, 21
- Ionization techniques—analytical method (*see also* Laser fluorescence)
  - combustion, 50

## L

- Laser excitation (*see* Laser fluorescence)
- Laser fluorescence—analytical methods
  - combustion analysis, 50
  - fingerprints (in criminalistics), 36
  - materials science, 144
  - on solid substrates, 133
  - photolytic fragmentation, 123

- tetracene spectra, 75
- thermal lensing, 108
- Laser techniques (*see also* Luminescence spectroscopy)
  - amino acid analysis, 151
  - fiber-optic-based selectivity, 88
  - fluorescence, 3, 36
  - two-photon spectroscopy of inorganic solids, 21–22
- Luminescence (*see* Luminescence spectroscopy)
- Luminescence spectroscopy—analytical method (*see also* Fluorescence spectroscopy, High resolution fluorescence spectroscopy, Quasi-linear fluorescence spectroscopy, and Shpol'skii spectroscopy)
  - amino acid analysis, 151
  - combustion, 50–51
  - criminalistics, 36
  - DNA adducts, 69
  - environmental materials, 3
  - fiber-optic-based selectivity, 88
  - inorganic solids, 21
  - laser detection of fingerprints (criminalistics), 36
  - luminescent and nonfluorescent organic and organometallic compounds, 123
  - materials science, 144
  - on solid substrates, 133
  - tetracene spectra, 75
  - thermal lensing in micellar and related media, 108
  - two-photon spectra, 21
- Luminescence techniques (*see* Luminescence spectroscopy)

## M

- Magnesium oxide (MgO), 144
- Materials science—analytical methods, 144
- Methodology
  - time/phase-resolution, 96
- Micelles
  - thermal lensing, 108
- Microchannel plate image intensifier, 36
- Molecular fluorescence spectrometry, 123
- Multiphoton ionization
  - combustion analysis, 50

## O

- Optical site selection, 133
- Optogalvanic flame analysis, 50–51

Organic and organometallic molecules  
laser photolytic fragmentation, 123

## P

Phosphorescence, 133  
Photochemical degradation, 70  
Photodiode array  
  environmental materials—analysis, 3  
Photolysis laser, 123  
Photolytic fragmentation (*see also* Laser techniques), 123  
Photothermal effect  
  micellar and related media, 108  
Picoseconds—tetracene decay, 96  
Point defects—materials science, 144–145  
Polarization (anisotropy), 89  
Polycyclic aromatic hydrocarbons (PAH)  
  analytical methods, 3  
  carcinogenesis initiation, 69  
Potassium chloride(KCl), 144  
Pulse-gated (flashlamp dye) laser fluorescence system  
  analysis of environmental materials, 3

## Q

Quasi-linear fluorescence spectroscopy  
  tetracene spectra, 75  
Quenching  
  combustion analysis, 50

## R

Rare earth ions—analytical methods (*see also* Luminescence spectroscopy)  
  two-photon spectroscopy, 21  
Reversed micelles (*see* Micelles)  
Rotational diffusion rates  
  Debye-Stokes-Einstein model (DSE), 96  
  dynamic fluorescence spectroscopy, 88

## S

Sheath flow cuvette, 151  
Shpol'skii spectroscopy  
  tetracene spectra, 75  
Site selective spectroscopy, 144, 146  
Solid state equilibria—materials science, 145  
Solid substrates—trace analysis, 133  
Solvents for thermal lens measurements, 109  
Spectra impurity ions  
  spectroscopic analysis, 21  
Spectral selectivity, 89  
Spectroscopic techniques (*see also* Luminescence spectroscopy), 88  
Spectroscopy (*see* Luminescence spectroscopy and Shpol'skii spectroscopy)  
Subattamole analysis, 151

## T

Temperature—fluorescence spectra of tetracene, 75  
Tetracene  
  fluorescence anisotropy decay, 96–98  
  fluorescence spectra, 75  
Thermal lensing (*see also* Luminescence spectroscopy), 108  
Thermo-optical properties  
  mechanisms for modification, 108  
  solvents for thermal lens measurements, 109  
Thin-layer chromatography  
  fluorescence detection—fingerprints, 37  
Time-resolved imaging, 36  
Trace analysis—solid substrates, 133  
Transition metal ions  
  two-photon spectroscopy, 21  
Two-photon spectra—analytical methods  
  inorganic solids, 21

## U

Ultraviolet light absorption  
  environmental materials—analysis, 3
