

Subject Index

A

- Age factors, skiing and snowboarding injuries, 87
- Alpine skiing
 - ACL ruptures, 95
 - injuries, 87
 - risk taking and, 139
 - trends, 108
 - learning binding design, 30
 - on-snow boot pressure measurements, 50
- Ankle injuries, 87
- Anterior cruciate ligament
 - critical load cases, 160
 - ruptures, 95
 - ski boot pressure measurements, 50
- Arthroscopic reduction, tibia plateau fractures, 183
- ASTM F 939-93, 30
- Athletic injuries, 87
- Attitude, injuries and, 139

B

- Binding
 - learning, design, 30
 - mechanical properties, 68
 - minimum retention settings, 11
 - settings, women, 95
 - testing, on-slope evaluation, 3

C

- Children, skiing and snowboarding injuries, 87
- Critical load cases, 160

D

- Death, rates and modalities, 132

E

- Epidemiology
 - injury trends, 108
 - skiboard injuries, 119

F

- Falling
 - critical load cases, 160
 - knee simulation, 149

Facilities, 132

Field measurements, ski boot pressure, 50

Fractures

- skiing and snowboarding injuries, 87
- see also Tibia fractures

Freestyle skiing, release bindings, on-slope evaluation, 3

G

Ground reaction force, 50

H

Helicopter evacuations, 177

I

Injuries

- helicopter evacuations, 177
- mechanism, critical load cases, 160
- risk taking and, 139

Injury rate, 95, 108

skiboard, 119

ISO recommendations

females and, 95

release binding settings, 3

K

Kinetics, ski boot pressure measurements, 50

Knee injuries, 87, 108

Knee ligaments, critical load cases, 160

Knee simulator, 149

L

Learning binding algorithms, 30

Load build up, knee simulation, 149

Lower leg injuries, 108

release bindings, on-slope evaluation, 3

skiboards, 119, 127

M

MCL, critical load cases, 160

Mechanical testing, snowboard boot stiffness, 68

Medivacs, 177

Minimum retention, 11

Modeling, optimal release binding settings, 11

Mogul skiing, release bindings, on-slope evaluation, 3

Motivation, injuries and, 139

N

Novel Pedar System, 50

P

Phantom foot, 95, 108

Pressure distribution, ski boot, 50

R

Release bindings

learning binding design, 30

minimum retention settings, 11

on-slope evaluation, 3

settings for women, 95

variable settings, 30

Risk taking, injuries and, 139

S

Sex, injuries and, 95

Shoulder injuries, skiboards, 119

Ski biomechanics, minimum retention settings, 11

Skiboards

injuries, 119

lower leg injuries, 127

Ski boots, on-snow boot pressure measurements, 50

Ski design, boot pressure measurements, 50

Skiing

knee simulator, 149

rates and modalities of death, 132

Skiing maneuvers, critical load cases, 160

Skiing safety, release bindings, on-slope evaluation, 3

Skiing trauma, 87

Ski injuries, 87

ACL ruptures, 95

helicopter evacuations, 177

release bindings, on-slope evaluation, 3

skiboards, 119, 127

tibia plateau fractures, 183

trends, 108

Ski properties, 50

Ski safety, minimum retention settings, 11

Snowboard boot, determining stiffness, 68

Snowboarding injuries, 87

helicopter evacuations, 177

rates and modalities of death, 132

Sprains, skiing and snowboarding injuries, 87

Stiffness, snowboard boot, 68

T

Telemarking, injuries, 87

Tibia fractures

skiboards, 119

skiing and snowboarding injuries, 87

Tibia plateau fractures, arthroscopically assisted operative treatment, 183

Transition maneuver, 160

W

Wrist injuries, 87
