

# Subject Index

## A

- Acceleration
  - drop height, multidirectional, 257
  - helmet impact testing, 244, 248–249
- Accelerometer, 270
- Adolescent players, physique differences
  - in, 90–93
- Aging of equipment, 151–152
- Amateur hockey
  - blade servicing, 135
  - body-checking, 84–103
  - eye and face injuries, 52–54
  - injury rates, 15–21
  - Pee-Wee player body structure, 90–93
  - Quebec Sports Safety Board, 64–65
- Amateur Hockey Association of the
  - United States (AHAUS), 35–36
- Anthropometric test dummy (ATD), 72–75
- ASTM Specifications
  - F 513–77: 55–57
  - F 513–86: 47, 52–53
  - F 737–81: 130
  - F 737–86: 124, 129–130, 135
  - F 1045–87: 197, 262–273
  - sponsored by ASTM Subcommittee
    - F08.15, 195–197
- Attitudes and mentality
  - body-checking, 85–90, 92–97
  - face mask use, 55–56
  - health care costs and hockey ethics, 58–62
  - injury rates and, 39–40
  - toward protective equipment, 230–232
- Audits of protective equipment, 219
- Axial compressive loading, 71–82

## B

- Body-checking
  - Canadian rule changes, 84–85
  - injury rates and, 97–100
  - national survey, Canada, 100–103
  - penalty increases and, 92–97
  - rule changes, 84–85

- Boot construction and blade fit, 135
- Brain injury
  - impact testing and, 242–243

## C

- Calculated risk, 9–10
- Catastrophic injury rates, 25, 27
- CCM blade, 124
- Certification of protective equipment, 213, 216
- Cervical element loading, 73, 76–79
- Cervical spine fractures, 71–82
- Cervical spine tolerance, 77–78
- Checking, rule changes, 41–42
- Chin strap
  - mouth guard combined with, 17–18
  - tests, 273
- College hockey injury rates, 20–23
- Compression-moulded plastic helmets, 170–172
- Compulsory use of protective equipment, 230–232
- Computer simulation
  - helmet impact testing, 240–241, 243–247
  - performance specification, 270–272
- Consent, risk assumption in hockey, 46
- Consumer protection
  - plastic-metal skate blades, 130–135
  - review of protective equipment, 211
- Cooperall protective girdle, 176, 178
- Cradle-type helmets, 224–227
- Cruciate ligament injury, 105

## D

- Dental injury rates, 18, 20
- Developed force, helmet impact testing, 244, 248–249
- Disconfirmation concept in epidemiology, 12–13
- Displacement, helmet impact testing, 244, 248–249
- Dorsal-plantar flexion displacement curve, 144, 146

- Drop height testing
  - apparatus, 254–261
  - impact testing, 272–273
- Dynamic failure loads, cervical spine
  - injuries, 78–79

## E

- Economic gain, versus hockey safety, 60–62
- Edge durability on skate blade, 134, 135–139
- Elbow pad, 175–176
- End and corner board modification, 188, 192–194
- Energy absorption in protective equipment, 152
- Epidemiology
  - centralization of data, 12–13
  - disconfirmation concept, 12–13
  - eye injuries, 29–31
  - injury rates, 9–13
- Equipment (*see also* Protective equipment)
  - ASTM/HECC certification, 52–53
  - changes in, 11–12
- Ethics
  - hockey health care, 58–62
  - injury protection, 230–232
- External force resistance, knee braces, 109, 112–113
- Eye guards, 150–151
- Eye injuries
  - Canadian equipment standards, 207, 212, 216
  - Canadian statistics, 216
  - epidemiology, 29–31
  - reducing risk, 52–54
  - unprotected players, 235–236

## F

- Face injury, reducing risk, 52–54
- Face mask
  - ASTM/HECC certification, 53
  - Canadian standards, 207–219
  - capabilities and limitations, 150–153
  - costs and ethics, 58–62
  - eye injuries, 30–31
  - full face and visor type models, 235–239
  - health care costs and ethics, 58–62

- historical development, 228–230
- rule changes, 35–36
- Swedish standards, 228–230
- use guidelines, 55–57

Fiberglass materials, helmet development, 224–225

- Fighting and injury rates, 22–23
- Foam padding for helmets, 183
- Fractures, body-checking and, 99–100
- Free-fall impact testing, 262–265
- Full face guards
  - versus half face shield, 55–57
  - versus visor type, 235–239

## G

- Gadd severity index (GSI)
  - helmet impact testing, 242–244
  - recording apparatus, 270–272
- Goal pads, 164–168
- Goaltender face guards, 228–230
- Goniometric studies, knee braces, 105–111

## H

- Half face shield, 55–57
- Headform
  - helmet testing, 250, 252, 263, 266–267
  - standards, 212–217
- Head injury criterion (HIC), 243
- Head protection (helmet and face guard combined), 228–230
- Health care costs of hockey, 58–62
- Heat treatment of metal blades, 125
- Heel safety guard, 120–121
- Helmet
  - ASTM/HECC certification, 53
  - Canadian standards, 207–219
  - compulsory use guidelines, 220–227
  - cradle liners, 224–227
  - fiberglass materials, 224–225
  - historical development, 164, 170–175
  - impact testing, 240–261
  - liability, 48
  - limitations and capabilities, 150–153
  - one-piece shell prototype, 221–222
  - padding material, 81–82, 226–227
  - plastic materials for, 223–224
  - product liability, 48
  - rims and edges of, 152–153

stiffness properties, 81–82  
 Swedish standards, 221–224  
 three-piece shell prototype, 221–222  
 tool costs of, 175  
**High-sticking penalties**, 95–97  
**Hockey pants**, 175–177  
**Hockey sticks**  
   failure sites, 160  
   geometry and dynamics, 157–162  
   performance evaluation, 157–162  
   safety factors, 154–163  
**Horizontal force depletion**, 142–143  
**“Hostile aggression” penalties**, 95–97  
**Human factors and protective equipment**,  
   152

## I

**Ice behavior and spinal injuries**, 81–82  
   (*see also* Attitudes; Violence)  
**Ice reaction force vector**, 142–143  
**ICM blade**, 124, 126  
**Impact testing**  
   cervical spine injuries, 73–77, 80–82  
   free-fall, 262–265  
   full face and visor face guards, 235–239  
   helmet safety, 240–261  
   ice surface characteristics, 266, 268  
   market effect, 256, 258, 260  
   testing sites, 266  
   velocity measurement, 266, 269  
**Information management for hockey**  
   safety, 67  
**Infraction guidelines**, 41–42  
**Injection-molded plastic helmet**, 170,  
   172  
**Injury rates**  
   amateur hockey, 15–21  
   body-checking and, 97–100  
   catastrophic injuries, 25, 27  
   college hockey, 20–24, 26  
   eye injuries, 29–31  
   hockey sticks, 156–157  
   insurance claims, 233–234  
   knee braces, 105–109  
   professional hockey, 23–25  
   rule changes, 37–42  
   statistical methods for, 232–234  
**Inspection of protective equipment**, 213,  
   216

**“Instrumental” penalties**, 95–97  
**Instrumentation for impact testing**, 251,  
   253–254  
**Insurance against injury**, 232–233  
**International Organization for Standard-**  
   **ization (ISO)**  
   head protection standards, 232  
   protective equipment, 213  
**Intervention model for hockey safety**, 65

## K

**Kinematic analysis of joint stress**, 141–149  
**Knee braces**  
   frequency of use and injury prevention,  
     105  
   goniometric study, 105–108  
   knee injury, 104–114

## L

**Last clear chance doctrine**, 45–46  
**Liability laws**  
   hockey safety and ethics, 61–62  
   risk assumption, 44–50

## M

**Mechanical test rig**  
   calibration and repeatability, 254–255  
   helmet impact testing, 250–253  
**Mechanism of injury**  
   hockey sticks, 156–162  
   neck injuries, 71–82  
   spine injuries, 72–75  
**Metal skate blades, heat treatment**, 125  
**Molded-in skate blade**, 120–121, 124  
**Mouth guard**  
   development of, 16–18, 17–18  
   improper use of, 53–54

## N

**National Athletic Injury Reporting System**  
   (NAIRS), 22–24  
**National Athletic Injury Surveillance**  
   System, 11  
**National Collegiate Athletic Association**,  
   26  
**Natural ice surfaces**, 202–203

## Neck injuries

helmet rims and edges, 152–153

mechanism of, 71–82

“Norm violation” penalties, 95–97

Nose contact tests, face masks, 237–238

Numonics analyzer, used in face mask development, 236–237

Nylite skate blade, 132–133

## O

### Officiating

body-checking penalties, 92–97

injury rates and, 37–42

### Ongoing surveillance system

epidemiology, 10–12

injury rates, 14–27

Opposing players’ liability, 48–50

## P

Peak shear, compression and moment of force, 77–79

### Pee-Wee players

body-checking by, 84–103

morphological-biomechanical differences, 90–93, 96

### Penalties

average number per game, 97

trends in, 94–97

Perfecta blade, 124

Performance tests, knee braces, 109, 112

### Plastic-metal skate blades

design analyses, 124–125

marketing techniques, 130–135

test results, 128

Plastic padding material in helmets, 224, 226–227

Plastic skate blades, 120–121

### Plastics

helmet development, 223–224

liner padding for helmets, 224, 226–227

skate blades, 125

Player speed, cinematographic analysis, 158

Playing surface (*see also* Rink design)

area size, 188

evolution, 187–200

Pneumatic air cannon, 178, 180

Polymer plastic skate blades, 125

Polyvinyl chloride helmets, 223–224

Post-assembled skate blade

design problems, 127–129

examples of, 122, 124

Post shrinkage in skate blades, 124

Premises liability, risk assumption in hockey, 46–47

Products liability, risk assumption in hockey, 47–48

### Professional hockey

blade servicing, 135

injury rates, 23–24

Quebec Sports Safety Board, 65

Prolite tubular blade, 122

Pronation-supination displacement curve, 144–145, 147

Protective braces, knee injury, 104–114

### Protective equipment

aging of, 151–152

Canadian standards, 207–219

as catalyst for violence, 55–57

defective, 16–18

fear of injury and, 40

historical perspective, 164–183

knee injury brace, 104–114

limitations and capabilities, 150–153

products liability, 47–48

testing, certification, and inspection, 213, 216

Public review of equipment standards, 211

### Puck velocity

cinematographic analysis, 159

face mask development and, 236–239

pneumatic air cannon, 178

## Q

Quadriplegic injuries. (*see also* Spinal cord injuries)

hockey versus football, 10–11

Quebec Sports Safety Board, 63–68

## R

Research in hockey safety, 66–67

Rink design, 187–200

American versus European dimensions, 188–192

ends and corners modification, 188, 192–194

- enlargement, 188, 192–193
- goal location, 192–194
- natural and seminatural facilities, 202–204
- standards, 195–200
- Risk assumption**
  - eye and face injuries, in amateur hockey, 52–54
  - liability, 44–51
- Risk reduction, eye and face injuries, 52–54**
- Roughing penalties, 95–97**
- Rule changes**
  - injury rates, 37–42
  - injury surveillance, 11–12
  - safety as a factor, 35–36

## S

- Safety**
  - versus economic gain, 60–62
  - versus victory, 39–40
- Safety guard requirements, skate blades, 133**
- Seminatural ice surface, 203–204**
- Severity indices for helmet impact testing, 243–244, 247**
- Sharpening equipment for skate blades, 135**
- Shooting speeds of players, face mask testing, 239**
- Shoulder injuries**
  - protective equipment development, 176, 179
  - rate declines, 18
- Shoulder pads, 176, 179**
- Skate blades**
  - design problems, 125–127
  - development, 117–120
  - edge durability, 135–139
  - fit to boot, 135
  - heel safety guard, 120–121
  - plastic materials, 120–121
  - post-assembled design, 127–129
  - safety factors, 117–139
  - servicing techniques, 135
  - support of standards, 135–139
  - test equipment, 131–132
  - tubular, 120
  - Tuuk blade, 122

- Skates, historical development, 164, 169–170**
- Slap shot**
  - hockey sticks, 160–161
  - standing and skating shots, 156
- Slashing penalties, 95–97**
- SLM blade**
  - design problems, 124, 126–127
  - hardness and wear table, 139
- “Spearing posture” and hockey injuries, 10–11**
- Spectator injury, 50**
- Spinal cord injury**
  - hockey versus football, 10
  - increase of, 25, 27
  - mechanisms and prevention, 71–82
  - rule changes and officiating, 41
- Standards**
  - Canadian standards, 207–219
  - eye injuries, 29–31
  - for protective equipment, 208–211, 232
  - rink design, 194–200
  - skate blade safety, 135, 139
  - Swedish standards development, 220–234
- Statistics on injuries, 232–234**
- Stickwork, rule changes, 41–42**
- Subtalar joint**
  - kinematic analysis, 141–149
  - supination and pronation, 146–149
- Surface characteristics**
  - natural and seminatural facilities, 202–204
  - skate blade testing, 136–137

## T

- Talocrural joint**
  - dorsal and plantar flexion, 146, 148
  - kinematic analysis, 141–149
- Taping modifications to hockey sticks, 154–156**
- Temperature change, blade stresses and strains, 124**
- Test equipment**
  - drop height testing, 264–271
  - protective equipment testing, 213, 216
  - skate blades, 130–132

Throat guards  
  cut resistance test, 230  
  development of, 230–231  
  for goaltenders, 53  
Trade-offs of protective equipment, 150–153  
Tripping penalties, 95–97  
Truth in advertising, 130–135  
Tubular skate blade, 120, 122  
Tuuk blade  
  design problems, 127–129  
  hardness and wear table, 139  
  marketing methods, 132, 134  
  safety factors, 122, 124

## V

Velocity measurement, helmet impact testing, 266, 269–270  
Victory versus safety in hockey, 39–40

Video camera, safety analysis, 178, 181–182  
Violence in hockey, promoted by protective equipment, 55–57  
Visor type face masks, 235–239

## W

Warmth factor of equipment, 164  
Warmth as factor in protective equipment, 164  
Wayne State curve for concussion tolerance, 242  
Whiplash effect, helmet design and, 221–222  
Wrist shots  
  hockey sticks and, 160, 162  
  standing and skating shots, 156

## Z

Zamboni machine, 136–137
