FOREWORD TO FIRST EDITION

Committee D-19 on Industrial Water of the American Society for Testing Materials has long believed that something more than standard methods of testing are needed by those who look to the Society for aid. A general discussion of the nature and uses of industrial water should illuminate these prescribed procedures and specifications.

The inception of a Manual on Industrial Water occurred before World War II, but the actual preparation was begun by a section of Committee D-19 in 1946. This section consisted of R. C. Adams (chairman), A. A. Berk, T. H. Daugherty, O. M. Elliott, J. A. Holmes, C. E. Imhoff, A. K. Light, F. U. Neat, F. R. Owens, and A. H. Reynolds. Each member of the section drafted an assigned portion of the Manual with more or less assistance from his associates and from other members of Committee D-19. These drafts were modified, correlated, and assembled by the entire section so that the resulting Manual is the product of group effort in the Society tradition, not a compilation of individual authorships. Many persons not in the section contributed to the Manual.¹ Particular acknowledgment should be made to Max Hecht, L. K. Herndon, E. P. Partridge and C. K. Rice.

This first edition of the Manual will be revised to keep it up to date, and subsequent editions should appear periodically. Any errors noted, or suggestions for revision and improvement, should be brought to the attention of the Society at its headquarters.

January, 1953.

FOREWORD TO SECOND EDITION

The first edition of the Manual on Industrial Water and Industrial Waste Water was reprinted three times. This widespread acceptance has demonstrated the need for a publication devoted to industrial water. Each printing of the Manual was brought up to date by inclusion of all current ASTM methods for the examination of water. The editorial matter, however, was reprinted without revision.

Committee D-19 has taken note of the fact that interest in the characteristics of water is not confined to its suitability for process use, but continues after its final discharge from the plant. This continuing interest arises from the potential effects of certain waste waters on downstream uses. It was decided therefore that a new edition of the Manual should contain information on waste water as well as process water.

Preparation of the second edition was assigned to a task group of Committee D-19, consisting of F. N. Alquist,¹ G. D. Beal, F. E. Clarke, B. W. Dickerson, D. K. French, J. E. Kinney, W. W. Leathen, S. K. Love, W. A. Moore, F. R. Owens, J. K. Rice, C. C. Ruchhoft,¹ R. K. Scott, J. M.

¹ Deceased.

Seamon, J. B. Smith, F. N. Speller, R. F. Weston, and R. D. Hoak, chairman. The new edition was composed in the same manner as the first one. Thus it represents a real collaborative effort entailing group responsibility for all the chapters.

Successive editions of the Manual will be published from time to time. Any errors of fact, or suggestions for revision or improvement, should be brought to the attention of the Society.

January, 1960.

NOTE.—The Society is not responsible, as a body, for the statements and opinions advanced in this publication.

Nothing contained in any publication of the American Society for Testing Materials is to be construed as granting any right, by implication or otherwise, for manufacture, sale or use in connection with any method, apparatus or product covered by Letters Patent, nor as insuring anyone against liability for infringement of Letters Patent.

CONTENTS

Introduction	PAGE 1
PART I. INDUSTRIAL WATER—GENERAL USES AND PROBLEMS OF SAMPLING AND ANALYSIS	
Chapter I. Uses of Industrial Water.....	5
Chapter II. Effects of Impurities on Water Uses.....	17
Chapter III. Self-Purification of Streams.....	29
Chapter IV. Composition and Classification of Industrial Water and Water-Formed Deposits.....	37
Chapter V. Treatment of Process Water and Waste Water.....	53
Chapter VI. Sampling and Flow Measurement of Industrial Water and Industrial Waste Water.....	85
Chapter VII. Analysis of Industrial Water and Industrial Waste Water.....	109
Chapter VIII. Sampling and Identification of Water-Formed Deposits.....	143
Chapter IX. Analysis of Water-Formed Deposits.....	165
Chapter X. Radioactive Nuclides in Water.....	175
PART II. ASTM STANDARDS ON INDUSTRIAL WATER AND INDUSTRIAL WASTE WATER	
Introduction to Laboratory Practices.....	199

D 992 - 52. Nitrate Ion in Industrial Water.....	320
Nitrate Ion in Industrial Water (Proposed, Non-Referee).....	601
D 1254 - 57 T. Nitrite Ion in Industrial Water.....	445
D 1292 - 59 T. Odor of Industrial Waste Water.....	466
D 1340 - 56. Oily Matter in Industrial Waste Water.....	476
D 1498 - 59. Oxidation-Reduction Potential of Industrial Water.....	540
D 515 - 58 T. Phosphate in Industrial Water.....	237
Orthophosphate, Total, in Industrial Water (Proposed, Non-Referee).....	604
D 1293 - 58. pH of Industrial Water and Industrial Waste Water.....	472
E 70 - 52 T. pH of Aqueous Solutions with the Glass Electrode, Determination of.....	588
D 1689 - 59 T. Silica in High-Purity Water.....	576
D 859 - 55 T. Silica in Industrial Water and Industrial Waste Water.....	274
D 1127 - 50 T. Sodium and Potassium in Industrial Water.....	380
D 1428 - 56 T. Sodium and Potassium Ions in Industrial Water and Water-Formed Deposits by Flame Photometry.....	518
D 1429 - 56 T. Specific Gravity of Industrial Water and Industrial Waste Water..	527
D 516 - 59 T. Sulfate Ion in Industrial Water and Industrial Waste Water.....	246
D 993 - 58. Sulfate-Reducing Bacteria in Industrial Water and Water-Formed Deposits.....	323
D 1255 - 59. Sulfides in Industrial Waste Water.....	450
D 1339 - 54 T. Sulfite Ion in Industrial Water.....	474
Sulfite Ion in Industrial Water (Proposed, Non-Referee)....	602
D 1590 - 58 T. Surface Tension of Industrial Water and Industrial Waste Water..	559
D 1069 - 58. Suspended and Dissolved Matter (Suspended and Dissolved Solids) in Industrial Water and Industrial Waste Water.....	351
D 1341 - 57. Thickness of Internal Deposits on Tubular Heat Exchange Surfaces, Determination of.....	483

<i>Methods of Test for:</i>	PAGE
D 1345 – 59. Toxicity, Acute, of Industrial Waste Water to Fresh-Water Fishes.....	486
D 934 – 52. X-Ray Diffraction Method, Identification of Crystalline Compounds in Water-Formed Deposits.....	311
D 1691 – 59 T. Zinc in Industrial Water and Industrial Waste Water.....	584
Abbreviated Methods for the Analysis of Water Supplies in the Evaporative Industry:	
Acidity and Alkalinity in Industrial Water (Proposed, Non-Referee).....	595
Hardness in Industrial Water (Proposed, Non-Referee).....	598
Hydroxide Ion in Industrial Water (Proposed, Non-Referee)...	600
Nitrate Ion in Industrial Water (Proposed, Non-Referee)....	601
Sulfite Ion in Industrial Water (Proposed, Non-Referee)....	602
Orthophosphate, Total, in Industrial Water (Proposed, Non-Referee).....	604
Appearance Properties of Industrial Water (Proposed).....	607

Corrosivity Tests

<i>Specifications for:</i>	
D 1141 – 52. Substitute Ocean Water.....	398

Methods of:

D 935 – 49. Corrosivity Test of Industrial Water (NDHA Method).....	316
D 807 – 52. Corrosivity Test of Industrial Water (USBM Embrittlement Detector Method).....	259
D 1591 – 58 T. Effect of Water in Tubular Heat Exchangers.....	562

Methods of Reporting

<i>Methods of:</i>	
D 596 – 58. Reporting Results of Analysis of Industrial Water and Industrial Waste Water.....	255
D 933 – 50. Reporting Results of Examination and Analysis of Water-Formed Deposits.....	307

Precision of Methods

<i>Procedure for:</i>	
Determination of Precision of Committee D-19 Methods.....	203

Classification

<i>Classification of:</i>	
C 375 – 58. Water Used in Milling Porcelain Enamel.....	207

APPENDICES

Appendix I: Reference Tables and Curves.....	623
Atomic Weights of the More Common Elements.....	623
Chemical Conversion Factors: Residue to Pertinent Element or Radical.....	624
Dissolved Oxygen (Saturation Values).....	624
Density and Viscosity of Water.....	624
Ionic Equivalent Conductance at 25 C.....	625
Temperature Conversion Formulas.....	625
Bicarbonate, Carbonate, and Hydroxide Relationships.....	625
Common Conversion Factors.....	626
