

Subject Index

- Advanced Very High Resolution
 - Radiometer, change detection methodology, 43
- Aerial photography, 154
 - integration with GIS data set, 66
 - military exercise areas, 107
- Alpine Snow Cover Analysis System, 38
- Amazon Forest, change detection methodology, 43
- ASTM "Content Standard for Digital Geospatial Metadata", interpreting, 127
- ASTM D 420, 175
- ASTM D 5518, 175
- ASTM D 5735, 174
- ASTM D 5750, 174
- ASTM D 5777, 174
- Certification, remote sensing and GIS professionals, 89
- Characterization
 - ground water systems, 131
 - hazardous and radioactive wastes, 55
- Climate change, snowmelt runoff, 38
- Conceptualization, ground water systems, 131
- Coordinate resolution, 66
- Database management, 38
- Data selection, remote sensing, 47
- Data transfer, 38
- Deforestation, 43
- Department of Energy, environmental management, 55
- Digital elevation data, 29
- Drainage, 5
- Education, GIS and remote sensing, importance, 89
- Environmental education, 101
- Environmental hazards, remote sensing, 101, 107
- Environmental management, 17
 - spatial data technologies, 55
- Environmental monitoring, 17
- Environmental site assessment, 101
- Environmental site characterization, 5
- Fracture systems, 5
- Geographic Information Systems, 17, 38
 - analysis of transportation effects on mineral activities, 89
 - change detection methodology, 43
 - content standard for digital metadata, 127
 - environmental assessment of potential environmental hazards, 101
 - ground water
 - conceptualization and
 - characterization, 131
 - data requirements, 75
 - hazardous and radioactive wastes, 55
 - importance of education, 89
 - integration of data set with aerial photography, 66
 - metadata content standards, application, 146
 - National Aerial Photography Program as digital ortho image map base, 154
 - object-oriented, integrating in geohydrological information system, 117
- Geohydrological information system, integrating object-oriented GIS, 117
- Geology
 - site characterization, 5
 - visualization, 29
- Geomorphology, visualization, 29
- Germany, environmental remote sensing of military exercise areas, 107
- GIS, *see* Geographic Information Systems
- Global Positioning System
 - hazardous and radioactive wastes, 55
 - metadata content standards, application, 146
- Glossary, 163
- Ground water, GIS
 - conceptualization and characterization, 131
 - data requirements, 75
- Image enhancement, 5
 - Landsat TM images, 29
- Image processing, 29
 - content standard for metadata, 127
 - snowmelt runoff modeling, 38
- Integration strategies, 17
- Interfaces, data transfer, 38
- Labor mobility, 89
- Landforms, 5
- Landsat TM, 29
 - Amazon Forest, 43
- Land use, 5
- Lithology, 5
- Magnetic data, 29
- Metadata, content standard, 127
 - application, 146
- Method selection, remote sensing, 47
- Military exercise areas, environmental remote sensing, 107
- Minerals exploitation, 89
- Minerals resources management, 89
- Moisture, 5
- Monitoring, metadata content standards, 146
- National Aerial Photography Program, 154
- Newlands Project, 66
- Nuclear Weapons Complex, environmental management, 55
- Object-orientation, 117
- Ore deposit, 89
- Public land survey, 66
- Quality assurance, metadata content standards, 146
- Quality control, metadata content standards, 146
- Remediation, nuclear environmental contamination, 55
- Remote sensing, 17, 38
 - change detection methodology, 43
 - data selection, 47
 - environmental
 - assessment of potential environmental hazards, 101
 - military exercise areas, 107
 - importance of education, 89
- Road/rail network, 89
- Rock types, 5
- SAR/TM, 5
- Site characterization, 29, 127
 - ground water, 75
 - metadata content standards, 146
 - military exercise areas, 107
 - object-oriented GIS, 117
 - potential environmental hazards, 101
 - vegetated areas, 5
- Snowmelt runoff modeling, 38
- Software development and integration, object-oriented GIS, 117
- Spatial data, environmental management technologies, 55
- Surficial materials, 5
- Sustainable development, 17
- Transport analysis, effects on mineral activities, 89
- Vegetated areas, site characterization, 5
- Vegetation stress, 5
- Visualization
 - geomorphological and geological features, 29
 - snowmelt runoff, 38
- Wastes, hazardous and radioactive, characterizing and monitoring, 55
- Wellhead protection, 75
