FOREWORD

The papers in this publication were presented at the Symposium on Resinographic Methods which was held on June 27-28, 1963, during the Sixty-sixth Annual Meeting of the Society at Atlantic City, N. J.

Eighteen papers were presented at the symposium which was divided into four sessions presided over, respectively, by T. G. Rochow, American Cyanamid Co., F. F. Morehead, American Viscose Corp., R. G. Scott, E. I. du Pont de Nemours and Co., Inc., and R. S. Stein of the University of Massachusetts.

The symposium was the first extensive treatment of its kind on the technique of resinography. Included, also, was a review of the techniques used in metallography, mineralography, petrography, and biology, but of primary interest were the behavioral changes in the composition or treatment of resins, polymers, and related plastic materials.

The symposium was sponsored by Subcommittee 28 of ASTM Committee E-1 on Methods of Testing, and the symposium chairman was T. G. Rochow.

NOTE.—The Society is not responsible, as a body, for the statements
and opinions advanced in this publication.

CONTENTS

	PAGE
Introduction to Resinography—T. G. Rochow.....	1
Discussion.....	7
The Preparation of Resins for Microscopical Examination by Reflected Light—J. I. Gedney and E. J. Thomas.....	10
Discussion.....	16
Transparent Section Microscopy and High-Speed Cinematography in Photoelastic Studies—R. E. Wright and N. W. Hall.....	17
Discussion.....	29
Microscopical Apparatus and Techniques for Observing the Fiber-Forming Process—A. O. Mogensen.....	31
Discussion.....	35
Analysis of Submicroscopic Structures in Resins by Polarized Light—M. Nahm-macher.....	36
Discussion.....	46
Measurement of the Surface Properties of Fibers—S. C. Scheier and W. J. Lyons....	47
Discussion.....	58
Light-Scattering Studies of the Internal Structure of Films and Fibers—M. B. Rhodes and R. S. Stein.....	59
Discussion.....	78
The Electron Microscope Applied to a Study of Polyethylene Fibers—R. G. Scott..	79
Discussion.....	88
Phase Microscopy in Resinography—F. F. Morehead and C. D. Felton.....	89
Discussion.....	99
Some Applications of Ultraviolet Microscopy in Resinography—C. D. Felton.....	100
Discussion.....	116
Fluorescence Microscopy of Resins—H. W. Zieler.....	117
Discussion.....	124
Dispersion Staining as Applied to Organic Polymer Identification—W. C. McCrone..	125
Discussion.....	130
Microscopical Techniques for the Study of Solid-State Polymerization—D. G. Grabar and C. S. Hsia-Chen.....	131
Discussion.....	138
Resinography with 8-A X-Rays—S. B. Newman.....	139
Electron Resinography of a Polyphase Polymeric System—M. C. Botty.....	149
Discussion.....	160
Microscopical Studies of Heterogeneous Polymeric Systems—G. C. Claver.....	161
Discussion.....	167
Stress Crazing Failure—A Mechanism of Surface Formation Through Wetting—R. E. Coulehan.....	168
Discussion.....	174

THIS PUBLICATION is one of many issued by the American Society for Testing and Materials in connection with its work of promoting knowledge of the properties of materials and developing standard specifications and tests for materials. Much of the data result from the voluntary contributions of many of the country's leading technical authorities from industry, scientific agencies, and government.

Over the years the Society has published many technical symposiums, reports, and special books. These may consist of a series of technical papers, reports by the ASTM technical committees, or compilations of data developed in special Society groups with many organizations cooperating. A list of ASTM publications and information on the work of the Society will be furnished on request.
