

## Subject Index

### A

- Adsorption saturation, 650
- Alpha irradiation
  - austenitic steels, 284
  - nickel, 295
- Aluminum
  - bubble growth during and after irradiation, 326
  - iron implantation, phase dissolution, 657
- Amorphization, niobium tin, 587
- Amorphous transformation
  - crystalline, irradiated Zircaloy-2, 457
  - neutron irradiated Zircaloy-4, 442
- Annealing, post-irradiation
  - aluminum, 326
  - Zircaloy-4, 442
- Argon, solid bubbles, 364
- Austenitic alloys
  - irradiated behavior, helium/dpa ratio and, 147
  - phosphorus-containing, irradiation behavior, 133
- Austenitic stainless steels
  - helium embrittlement, 223
  - irradiation behavior, 193, 203
  - titanium-modified, irradiation behavior, 160, 185
  - see also* Type 316 stainless steel
- Austenitic steels
  - helium diffusion to grain boundaries, 650
  - irradiation behavior, high temperature embrittlement, 284
  - vacancy rate absorption by grain boundaries, 632

### B

- Bubbles
  - austenitic and martensitic stainless steels, 223
  - in copper, positron annihilation, 639
  - effect on void formation and growth, 473

- irradiated martensitic/ferritic steels, 35
- nucleation, 639
  - at grain boundaries, 555
- sink strength effect on void swelling rate, 543
- titanium-modified austenitic stainless steels, 160
- Type 316 stainless steel, 172

### C

- Cavitation, tritium exposed copper, 340
- Cavities
  - effect on void formation and growth, 473
  - void swelling and, 501
- Chemical bias effect, void swelling, 501
- Chromium depletion
  - ferritic alloys, 396
  - stainless steel, 424
- Climbing dislocations, diffusional interaction with voids, 539
- Coldworking, void swelling suppression, 160
- Copper
  - boron-impregnated, 639
  - helium bubbles, positron annihilation, 639
  - oxygen-free, high conductivity, 340
  - tritium exposed, cavitation and embrittlement, 340
- Copper-based alloys, irradiation effect on chemical composition, 667
- Creep
  - cessation at high neutron exposures, stainless steels, 539
  - helium content and, 284
- Creep rupture
  - austenitic and martensitic stainless steels, 223
  - Hastelloy X, 271
- Crystalline-amorphous transformation, irradiated Zircaloy-2, 457
- Crystals, periodical spatial structure development, 510

**D**

- Defect cascade
  - ion-irradiated gold, 596
  - Nb<sub>3</sub>Sn, at low temperatures, 587
- Defect clusters, ion-irradiated gold, 596
- Diffusion, radiation enhanced, 604
- Diffusion coefficients, nickel, 604
- Dislocation bias, 396
- Dislocation density
  - copper, 639
  - void swelling suppression, 147
- Dislocation loops
  - austenitic stainless steels, 193
  - titanium-modified, 160
  - ferritic alloys, 73
  - ion-irradiated gold, 596
  - martensitic/ferritic steels, 98
  - nucleation, surface effect, 523
  - Type 316 stainless steel, 172
- Dislocation network, irradiated ferritic alloys, 73
- Dislocations
  - irradiated austenitic stainless steels, 193
  - slowing down of climb at high neutron exposures, 539
- Disordering, niobium tin, 587
- Displacement damage, ferritic steels, 246
- Distribution function approach, void distribution, 490
- Dynamic compaction, titanium-modified austenitic stainless steel, 185

**E**

- Elastic interaction, point defects, 510
- Electron irradiation, effect on chemical composition of alloys, 667
- Electron spectroscopy, thermally aged HT-9 steel, 114
- EM10 and EM12, irradiation behavior, 5
- Embrittlement
  - ferritic steels, 5
  - high temperature
    - austenitic steels, 284
    - Hastelloy X, 271
    - helium role, 284
  - tritium exposed copper, 340
- Energy dispersive X-ray microscopy
  - Hastelloy X, 271
  - thermally aged HT-9 steel, 114
- Epitaxy, solid inert gas bubbles, 364

**F**

- F17, irradiation behavior, 5
- Fe-B alloys, vacancy rate absorption by grain boundaries, 632
- Fe-Cr-Ni alloys
  - radiation-induced phosphorus segregation, 379
  - self-ion irradiated, freely migrating defects, 604
- Ferritic alloys
  - irradiation behavior, 73, 203
  - radiation-induced segregation, 396
- Ferritic steels, irradiation behavior, 5, 61, 246
- Forced oscillator, with damping, 572
- Freely migrating defects, self-ion irradiated nickel and Fe-Cr-Ni alloys, 604

**G**

- Gamma-ray irradiation, effect on chemical composition of alloys, 667
- Gas tungsten arc welding, Type 316 stainless steel, 301
- Gold, ion-irradiated, cascade cluster formation, 596
- Grain boundaries
  - deformation, nickel, irradiation effects, 295
  - helium
    - bubble nucleation, 555
    - diffusion to, 650
    - maximum of internal friction, 632, 650
    - segregation, stainless steel, 424
    - vacancy rate absorption, 632

**H**

- Hastelloy X, high temperature embrittlement, 271
- Heat-to-heat variation, Type 316 stainless steel, 172
- Helium
  - bubble
    - in copper, positron annihilation, 639
    - growth in aluminum, during and after irradiation, 326
    - nucleation at grain boundaries, 555
  - creep strength and, 284
  - diffusion to grain boundaries, 650
  - effects on aged Nimonic 90, 263
  - flux, 555
  - high temperature embrittlement role, 284

irradiated martensitic/ferritic steels, 35  
 isotopically alloyed injector foils, 315  
 zone cracking and, Type 316 stainless steel, 301  
 Helium/dpa ratio, irradiated austenitic alloys, 147  
 Helium embrittlement  
 austenitic and martensitic stainless steels, 223  
 ferritic steels, 246  
 Helium-implantation, Hastelloy X, 271  
 High-temperature radiation embrittlement, nickel, 295  
 HT-9 steel, thermal aging, 114

### I

Impact properties, ferritic steels, 246  
 Interatomic potential, solid inert gas bubbles, 364  
 Intergranular fracture  
 tritium exposed copper, 340  
 Type 316 stainless steel, 301  
 Internal friction, grain boundary maximum, 632, 650  
 Interstitial loops, nucleation, 523  
 Interstitials, superlattice parameters, 510  
 Iron  
 helium diffusion to grain boundaries, 650  
 implanted in aluminum, phase dissolution, 657  
 vacancy rate absorption by grain boundaries, 632  
 Iron-based alloys, irradiation effect on chemical composition, 667  
 Irradiation behavior, ferritic steels, 5, 61, 246  
 Isotopic alloying, mixed-spectrum reactors, 315

### K-L

Kirkendall effect, 501  
 Krypton  
 precipitation, after implantation, 353  
 solid bubbles, 364  
 Lath boundary, irradiated martensitic/ferritic steels, 35, 61  
 Lattice statics, solid inert gas bubbles, 364  
 Laves phase, irradiated ferritic steels, 61  
 Leading factor transient regime, void swelling, 501

### M

Manganese, radiation-induced segregation, 379  
 Martensitic/ferritic steels  
 irradiation behavior, 35  
 lath boundary, 35, 61  
 properties of initial, aged, and irradiated states, 98  
 Martensitic stainless steels, helium embrittlement, 223  
 Microhardness, aged Nimonic 90, 263  
 Microstructure  
 austenitic and martensitic stainless steels, 223  
 ferritic alloys, 73  
 ferritic steels, 5, 61  
 martensitic/ferritic steels, 98  
 Nimonic 90, 263  
 titanium-modified austenitic stainless steels, 160  
 Mixed-spectrum reactors, helium injection, 315  
 Mössbauer effect, 657

### N

Nb<sub>3</sub>Sn, defect cascades, at low temperatures, 587  
 Neutron irradiation, austenitic steels, 284  
 Nickel  
 defect configurations, solid inert gas bubbles, 364  
 doping, martensitic/ferritic steels, 35  
 grain boundary deformation, irradiation effects, 295  
 helium diffusion to grain boundaries, 650  
 precipitation of injected krypton, 353  
 radiation-induced phosphorus segregation, 379  
 self-ion irradiated, freely migrating defects, 604  
 vacancy rate absorption by grain boundaries, 632  
 void swelling suppression, 147  
 Nickel alloys  
 alternative polarity recombination centers, 623  
 high temperature embrittlement after irradiation, 271  
 Nickel-hafnium alloys, irradiation effect on chemical composition, 667

Niobium tin, defect cascades at low temperatures, 587  
 Nucleation, post-irradiation annealing, 326

## P

Phase dissolution, reimplantation, 657  
 Phase instability, neutron irradiated Zircaloy-4, 442  
 Phosphorus  
   radiation-induced segregation  
     nickel and Fe-Cr-Ni alloys, 379  
     stainless steels, 411  
   void swelling suppression, 133, 147  
 Platelets, solid inert gas bubbles, 364  
 Point defects  
   alternative polarity recombination centers, 623  
   diffusion, 523  
   effect on void formation and growth, 473  
   elastic interaction, 510  
   production, self-ion irradiated nickel and Fe-Cr-Ni alloys, 604  
   pulsing effects, 572  
   recombination, irradiation-induced solid solution decomposition, 437  
   stochastic fluctuations, 490  
 Positron annihilation, helium bubbles in copper, 639  
 Positron lifetime, 639  
 Precipitates  
   dissolution, neutron irradiated Zircaloy-4, 442  
   stability, ferritic alloys, 396  
   void swelling and, 473, 501  
 $\gamma'$ -Precipitates, aged Nimonic 90, 263  
 Precipitation  
   austenitic alloys, 203  
   titanium-modified, 160  
   ferritic steels, 61, 203  
   krypton, after implantation, 353  
   martensitic/ferritic steels, 35  
   thermal aging of HT-9 steel, 114  
   Type 316 stainless steel, 172  
 Precipitation phase, martensitic/ferritic steels, 98

## R

Radiation-induced segregation  
   ferritic alloys, 396  
   phosphorus, nickel and Fe-Cr-Ni alloys, 379  
 Rapid solidification, titanium-modified austenitic stainless steel, 185

Rare-earth impurity, alternative polarity recombination centers, 623  
 Reaction rate theory of radiation effects, 473  
 Recoil mixing, 604  
 Recombination  
   alternative polarity centers, 623  
   irradiation-induced solid solution decomposition, 437  
 Reimplantation, phase dissolution, 657  
 Relaxation field, solid inert gas bubbles, 364

## S

Silicon, radiation-induced segregation, 379  
 Solid inert gas bubbles, simulation, 364  
 Stacking fault tetrahedral, ion-irradiated gold, 596  
 Steady state swelling, 501  
 Steel 50, irradiation effect on chemical composition, 667  
 Stochastic fluctuations, point defects, 490  
 Stress corrosion cracking, irradiation-assisted, stainless steel, 411, 424  
 Superconductivity, niobium tin, 587  
 Superlattice, parameters, 510

## T

TENELON, irradiation behavior, 203  
 Tensile properties, ferritic steels, 246  
 Thermal aging  
   HT-9 steel, 114  
   martensitic/ferritic steels, 98, 114  
 Transmission electron, 271  
 Transmutation products, helium implantation, 315  
 Traps, superlattice parameters, 510  
 Tritium, exposed copper, cavitation and embrittlement, 340  
 Tritium trick, 301  
 Type 304 stainless steel, irradiation-assisted stress corrosion cracking and grain boundary segregation, 424  
 Type 316 stainless steel  
   creep cessation at high neutron exposures, 539  
   helium-induced degradation in weldability, 301  
   irradiation behavior, 172  
   radiation-induced phosphorus segregation, 411  
   small bubble sink strength effect on void swelling rate, 543  
   void swelling, 501

Type 316 L stainless steels  
 helium embrittlement, 223  
 irradiation behavior, 203

## V

### Vacancies

bias flow, 501  
 cluster, solid inert gas bubbles, 364  
 ion-irradiated gold, 596  
 rate of absorption by grain boundaries, 632  
 superlattice parameters, 510

### Void growth

microstructure-dependent mechanisms,  
 473  
 pulsing effects, 572

### Void nucleation

microstructure-dependent mechanisms,  
 473  
 point defect recombination, 437

### Voids

austenitic stainless steels, 193  
 diffusional interaction with climbing dis-  
 locations, 539  
 distribution, spatially homogeneous, sto-  
 chastic instability, 490  
 ferritic alloys, 61, 73  
 martensitic/ferritic steels, 35, 98  
 ordering, 490

### Void swelling

alternative polarity recombination cen-  
 ters, 623  
 austenitic alloys, 203  
 phosphorus-containing, 133  
 titanium-modified, 160, 185  
 chemical bias effect, 501  
 effects of starting dislocation density,  
 nickel, or phosphorus content, 147  
 ferritic alloys, 5, 73, 203, 246, 396  
 helium effect, 35  
 leading factor transient regime, 501  
 microstructure-dependent mechanisms,  
 473  
 point defect recombination, 437  
 small bubble sink strength effect on rate,  
 543  
 Type 316 stainless steel, 172, 501

## W-Z

Weldability, helium-induced degradation,  
 Type 316 stainless steel, 301

Xenon, solid bubbles, 364

Zeta-phase, neutron irradiated Zircaloy-4,  
 442

Zircaloy-2, electron irradiation-induced  
 amorphization of precipitates, 457

Zircaloy-4, microstructure, neutron irradiation,  
 442

Zone cracking, Type 316 stainless steel, 301
