Foreword

THIS PUBLICATION, *Petroleum Refining and Natural Gas Processing*, was sponsored by Committee D02 on Petroleum Products and Lubricants. This is Manual 58 in ASTM International's manual series.

*To
Our families*

Preface

Oil and gas have been the main sources of energy the world over for the past century and will remain important sources of energy for the first half of this century, and possibly beyond. Currently, more than 60 % of the world's energy is produced from oil and gas, and energy needs are increasing. In addition, oil and gas provide the main feedstocks for the petrochemical industry. World population is expected to increase to eight billion by 2030, which will demand an increase in energy of 40 % in the next two decades. With these increases in energy consumption it is becoming necessary to consider unconventional types of oils. Such oils, which are heavier, require more rigorous processing and treatment. The evolution of petroleum refining began with the birth of modern oil production in Pennsylvania in the nineteenth century. Current refineries are much more complex than those of a few decades ago and there is significant research concerning the development of more economical uses of available hydrocarbon resources.

In the past few decades there has been an increase in the number of publications that report advancements in the petroleum industry. *Petroleum Refining and Natural Gas Processing* is a continuation of those efforts and attempts to bring together the most recent advances in various areas of petroleum downstream activities, with an emphasis on economic and environmental considerations, heavy-oil processing, and new developments in oil and gas processing.

The primary goal of this book is to provide a comprehensive reference that covers the latest developments in all aspects of petroleum and natural gas processing in the downstream sector of the petroleum industry. It includes topics on economy and marketing, scheduling and planning, modeling and simulation, design and operation, inspection and maintenance, corrosion, environment, safety, storage and transportation, quality and process control, products specifications, management, biofuel processing and production, as well as other issues related to these topics. Every attempt has been made to avoid overlap between chapters, however, there are some topics that have been included in more than one chapter when relevant to both chapters. Another objective of this book is to describe the latest technology available to those working in the petroleum industry, especially designers, researchers, operators, managers, decision-makers, business people, and government officials. The petroleum industry is a diverse and complex industry and it is almost impossible to include all aspects of it in a single book. However, we tried to cover the most vital issues and we believe this is the most comprehensive resource published to date for use by people involved in this worldwide industry. We hope this contribution will be useful to them. In writing this book we benefited from the published works of many researchers, which are cited at the end of each chapter. We welcome comments and suggestions from readers.

More than 40 scientists, experts, and professionals from both academia and industry have cooperated and contributed to the 33 chapters in this book. Authors with years of experience made unique contributions not available in any similar publications. We are grateful to all of them for their efforts in bringing this book to fruition.

We also thank the large number of anonymous reviewers who went through lengthy manuscripts and provided us with their constructive comments and suggestions, which greatly enhanced the quality of the manual. Many publishers, organizations, and companies provided us with permission to use their published data, graphs, and figures and we thank them for their cooperation in supporting this publication effort.

We are also thankful to ASTM International for sponsoring publication of this book, especially to Kathy Dernoga, Monica Siperko, Marsha Firman, and other ASTM staff involved in this project. Kathy Dernoga's review and encouragement were essential to the completion of this work. The support and encouragement of Dr. George E. Totten, ASTM's Committee on Publications representative for this manual, is also appreciated. The reviewing process was managed and conducted by Christine Urso of the American Institute of Physics (AIP) and she was extremely cooperative in uploading the manuscripts to the online reviewing site, inviting reviewers, and handling of all manuscripts submitted for this manual. Also, many thanks to Rebecca L. Edwards, senior project manager at Cenveo Publisher Services for copyediting and production.

Finally, and most importantly, we thank our families for their patience, understanding, cooperation, and moral support, which were essential throughout this process.

M. R. Riazi—Kuwait University, Kuwait
Semih Eser—The Pennsylvania State University, University Park, PA, USA
Suresh S. Agrawal—Offsite Management Systems, Houston, TX, USA
José Luis Peña Díez—Repsol, Madrid, Spain

Contents

Preface	v
Chapter 1—Introduction	1
<i>M.R. Riazi, Semih Eser, José Luis Peña Díez, and Suresh S. Agrawal</i>	
Chapter 2—Feedstocks and Products of Crude Oil and Natural Gas Refineries	21
<i>M.R. Riazi and Semih Eser</i>	
Chapter 3—Worldwide Statistical Data on Proven Reserves, Production, and Refining Capacities of Crude Oil and Natural Gas	33
<i>M.R. Riazi, Mohan S. Rana, and José Luis Peña Díez</i>	
Chapter 4—Properties, Specifications, and Quality of Crude Oil and Petroleum Products	79
<i>M.R. Riazi and Semih Eser</i>	
Chapter 5—Crude Oil Refining Processes	101
<i>Semih Eser and M.R. Riazi</i>	
Chapter 6—Fluid Catalytic Cracking	127
<i>Ravi Kumar Voolapalli, Chiranjeevi Thota, D.T. Gokak, N.V. Choudary, and M.A. Siddiqui</i>	
Chapter 7—Hydroisomerization of Paraffins in Light Naphthas and Lube Oils for Quality Improvement	159
<i>B.L. Newalkar, N.V. Choudary, and M.A. Siddiqui</i>	
Chapter 8—Heavy-Oil Processing	177
<i>Semih Eser and Jose Guitian</i>	
Chapter 9—Advances in Petroleum Refining Processes	197
<i>Isao Mochida, Ray Fletcher, Shigeto Hatanaka, Hiroshi Toshima, Jun Inomata, Makato Inomata, Shinichi Inoue, Kazuo Matsuda, Shigeki Nagamatsu, and Shinichi Shimizu</i>	
Chapter 10—Advances in Catalysts for Refining Processes	223
<i>Isao Mochida, Ray Fletcher, Shigeto Hatanaka, Hiroshi Toshima, Shikegi Nagamatsu, Makato Inomata, Rong He, Richard S. Threlkel, Christopher J. Dillon, Junko Ida, Toshio Matsuhisa, Shinichi Inoue, Shinichi Shimizu, and Kazuo Shoji</i>	
Chapter 11—Natural Gas Conditioning and Processing	249
<i>Calogero Migliore</i>	
Chapter 12—Hydrogen Management	287
<i>N. Zhang and F. Liu</i>	
Chapter 13—Design Aspects of Separation Units and Processing Equipment	305
<i>M.C. Rodwell and M.R. Riazi</i>	
Chapter 14—Process Control and Instrumentation	355
<i>L. Raman and N.S. Murthy</i>	
Chapter 15—Modern Computer Process Control Refining Units	375
<i>Ravi Jaisinghani</i>	
Chapter 16—Refinery Inspection and Maintenance	393
<i>A.L. Kosta and Keshav Kishore</i>	
Chapter 17—Corrosion Inspection and Control in Refineries	437
<i>Jorge L. Hau</i>	
Chapter 18—Product Analysis and Quality Control	455
<i>Pradeep Kumar and N.S. Murthy</i>	

Chapter 19—Fuel Blending Technology and Management	473
<i>Suresh S. Agrawal</i>	
Chapter 20—Tank Farm Management	499
<i>Suresh S. Agrawal</i>	
Chapter 21—Refinery Planning and Scheduling	531
<i>Nan Zhang and Marc Valleur</i>	
Chapter 22—Transportation of Crude Oil, Natural Gas, and Petroleum Products	549
<i>Luis F. Ayala H.</i>	
Chapter 23—Introduction to Trading, Pricing, and Valuation of Crude Oils and Petroleum Products	577
<i>Cheng Seong Khor, Luis A. Ricardez-Sandoval, Ali Elkamel, and Nilay Shah</i>	
Chapter 24—A Review of Refinery Markets and Cost Estimation	597
<i>Mark J. Kaiser and James H. Gary</i>	
Chapter 25—Financial Risk Management in Refinery Operations Planning	631
<i>Miguel Bagajewicz</i>	
Chapter 26—Process Modeling and Simulation of Refineries	647
<i>María J. Guerra, Pablo Jiménez-Asenjo, Antonio López-Rodríguez, and José L. Peña Díez</i>	
Chapter 27—Maintenance Simulation and Optimization in Refineries and Process Plants	675
<i>Miguel Bagajewicz</i>	
Chapter 28—Roles of Computers in Petroleum Refineries	685
<i>Cheng Seong Khor and Ali Elkamel</i>	
Chapter 29—Environmental Issues Related to the Petroleum Refining Industry	701
<i>Cheng Seong Khor and Ali Elkamel</i>	
Chapter 30—Safety Issues Related to Petroleum Refineries	717
<i>Joel M. Haight</i>	
Chapter 31—Refinery Management	729
<i>Folkert J. Herlyn</i>	
Chapter 32—Biofuels and Biorefineries	747
<i>José Baro Calle</i>	
Chapter 33—Future Directions in Petroleum and Natural Gas Refining	769
<i>Mohan S. Rana, Jorge Ancheyta, M.R. Riazi, and Meena Marafi</i>	
Index	801

M. R. Riazi

Dr. M. R. Riazi is currently a Professor of Chemical Engineering at Kuwait University. He was previously an Assistant Professor at Pennsylvania State University (USA), where he also received his MS and PhD. He was also a visiting professor at various universities in the U.S., Canada, Europe and the Middle East. He has been consultant and invited speaker to more than 50 oil companies and research institutions in Canada, the U.S., Europe, India, China, Malaysia, Australia, the Middle East and North Africa, including invited speaker to the World Economic Forum. He is the author/co-author of more than 100 publications, including three books mainly in the areas of petroleum and chemical technology. He is the founding and Editor-in-Chief of IJOGC and an associate editor of some other international journals. He was awarded a Diploma of Honor from the National (American) Petroleum Engineering Society, as well as teaching and research awards from various universities. He is a member of AIChE and the Research Society of North America. (www.RiaziM.com)

Semih Eser

Semih Eser is a Professor of Energy and Geo-Environmental Engineering at Penn State University. He received his B.S. and M.S. degrees in Chemical Engineering from Middle East Technical University in Ankara, Turkey and his Ph.D. in Fuel Science from Penn State University. Professor Eser teaches courses on petroleum refining and energy engineering at John and Willie Department of Energy and Mineral Engineering and directs the Carbon Materials Program at the EMS Energy Institute at Penn State. He has served as Program Chair, Chair, and Councilor in the Fuel Chemistry Division of the American Chemical Society and as member of the Advisory Committee of the American Carbon Society.

Suresh S. Agrawal

Dr. Suresh S. Agrawal is founder and president of Offsite Management Systems LLC (www.globaloms.com) and has developed and installed innovative and technologically advanced automation software products, and integrated solutions for the automation of offsite operations of Chemical, Oil and Gas (COG) Industries. Dr. Agrawal has 25+ years of experience at senior positions with companies, including being Director of Refinery Offsite Operations at ABB Industrial Systems, Inc., Houston, Texas. He worked earlier with reputable companies such as 3X Corporation and Exxon Corporation in New Jersey. Dr. Agrawal has successfully managed many advanced offsite refinery control projects in numerous countries. He has a doctorate degree (Ph.D.) in Chemical Engineering from the Illinois Institute of Technology, Chicago, and a Bachelors Degree in Chemical Engineering from Indian Institute of Technology (I.I.T.), Mumbai, India. He has published more than 20 technical papers in the area of refinery offsite automation.

José Luis Peña Díez

José Luis Peña Díez is a consultant at the Technology Center at Repsol in Madrid, Spain. His professional activity includes more than twenty years of experience leading and participating in research projects in upstream and downstream petroleum technologies.

Following his studies in chemical sciences at the Complutense University of Madrid, he collaborated with universities and academic institutions to coordinate activities in the areas of chemical engineering and special process simulation. He is currently a part-time associate professor in chemical engineering at the Rey Juan Carlos University of Madrid.

Peña Díez is the author of forty technical articles and presentations at international conferences in the fields of petroleum fluids characterization, process engineering and control, and process simulation, areas in which his expertise contributed to this book.
