Foreword

ASTM Committee E-50 on Environmental Assessment is the sponsor of Data Series (DS) 64 on Cleanup Criteria for Contaminated Soil and Groundwater. Every attempt has been made to insure the accuracy and timeliness of the information included in this book. The general cut-off date for the information collected was 15 Aug., 1993.

Every effort has been made to ensure the data in the publication are accurate. However, in a book containing so many numbers, there is a possibility some errors may not have been caught and corrected in the quality control process. As such, if you find an error, please let ASTM know so that the errors may be corrected in the next update. Also, if you have any suggestions or comments, I would like to hear from you. If you have any complaints about the subject matter, I will share the blame with Bill Gullledge, Chairman of ASTM Subcommittee E50.04, who so freely volunteered me for this undertaking.

No book of this magnitude can be completed without assistance from many capable individuals. In particular, I would like to acknowledge Connie Marini of Environmental Data Resources, Inc. who was responsible for collecting state cleanup criteria, Tom Scelfo of Wehran who assisted me in collection of the cleanup criteria data, Kathy Dernoga and Sue Gebremedhin of ASTM who were responsible for coordinating my efforts, Kathleen A. Peters of ASTM who was responsible for the editing of text and inputting numerical cleanup values into the software, and AGC Sedgwick of Princeton, New Jersey who was responsible for developing the search software.
