

# Subject Index

## A

- Anisotropic constitutive relations, 151
- Anisotropy damage, 326
- Antielastic bending, 204
- Arthroplasty, hip, 429
- ASME code, 298, 412
- Autofrettage of pressurized components, 375
- Axial torsion strain cycling, 85
- Axial-torsional fatigue, 133, 313

## B

- Biaxial loading, 429
- Bauschinger effect, 298
- Biaxial fatigue
  - bending test methods, 204
  - cracking behavior, 151
  - cyclic deformation, 151, 259
  - damage assessment, 7
  - life prediction models, 151
  - low-cycle, 313
  - mean stress effect, 55
  - strain energy parameters, 67
  - test methods, 204
  - test results, 168(table)
  - triaxiality factor, 85
- Biaxial stress-strain behavior, 37

## C

- Carbon steel, 298
- Cobalt-base superalloy, 133
  - mechanical properties, 137–138(tables)
- Composite material, 429
- Compression-compression fatigue, 429
- Constitutive equations, 375
- Constraint factor, 55, 397
- Crack initiation, 313, 326
- Crack nucleation, 7, 326
- Crack propagation, 313
- Crack stability, 359
- Cracking behavior
  - cyclic deformation, 151
  - low-cycle fatigue, 313
  - mean stress effect, 55
  - test methods, 204
- Cracks. 55

Creep-fatigue interaction, 107

Creep strain, 397

Critical element model, 429

Critical plane approach, 37

Critical plane damage models, 7

Cross hardening, 259

Cyclic deformation, 7, 151, 259

Cyclic fatigue

- life prediction, 67

- loading, 55, 298

- multiaxial fatigue life, 37, 298

- stress-strain modeling, 67

Cyclic hardening, 259, 375

Cyclic plasticity, 273

Cyclic softening, 375

Cyclic stress-strain, 151, 273, 298

## D

Damage accumulation, 107

Damage criteria, 37, 273, 326

Damage measurements, 183

Damage models, 7

Deformation behavior, 107, 223, 244

Deviatoric invariants, 223

Distortion strain energy, 55

## E

Elastic finite element analysis, 397

Elastic plastic analysis, 412

Elastic plastic strain life

- at elevated temperatures, 85

Elastic-plastic stress-strain behavior, 37

Elastic strain, 397

Elevated temperature, 133, 223

Experimental multiaxial fatigue studies, 2,  
overview

Extra hardening, 259

## F

Factorial design, 359, 363–365(tables)

Failure cycles, 74–79(figs.)

Failure models, 7

Fatigue

- analysis, 85

- behavior, 67, 204, 345

- crack nucleation, 7, 326

**Fatigue—continued**

damage, 7, 183, 273, 326, 429  
 evaluations of pressure vessel components, 412  
 failure criterion, 55  
 fracture, 67  
 life models, 1, overview, 133  
 life prediction, 37, 313  
 materials, 359  
 mean-stress effect, 55  
 modelling, 37  
 resistance, 120  
 strain-energy parameters, 67  
 stress-strain predictions, 273

**Fatigue data, 95(table)****Fatigue limit, 120****Fatigue of notched components, 3, overview****Follow-up, strain estimates, 397****Fracture mechanics, 359****G****Gloss analysis, 397****H****Hardening, 259, 273, 298****Hastelloy X, 223, 225(table), 234(table)****High-cycle multiaxial fatigue**

macro-micro approach, 120

**High-strength steel, 345****High temperature, 313****Hip prostheses, 429****I****Inelastic strain estimates, 397****In-phase loading, 55, 67, 133****Irreversible plastic strain, 259****Isothermal fatigue experiments, 133****Isotropic-kinematic hardening, 37****K****Kinematic hardening, 273****L****Life prediction**

axial-torsional creep behavior, 133, 151  
 composite hip prostheses, 429  
 cyclic deformation, 151  
 damage evaluation, 273  
 fatigue, 67, 82(figs), 273, 313  
 multiaxial creep fatigue, 107  
 pressure vessel components, 412

**Linearized stresses, 412**

Loading, 67, 107, 244, 345, 412  
 Low carbon steel, 326, 327(table), 330–331(tables)

**Low-cycle fatigue, 397, 412****Low-cycle fatigue tests, 183, 204, 326****M****Macro-micro approach, 120****Macroscopic cracks, 55****Master life curve, 55****Material-dependent failure models, 7**

**Material properties for damage accumulation type 304 stainless steel, 113(table)**

**Mean stress, 55****Metal fatigue, 326****Micro/macro**

crack growth studies, overview, 3  
 high-cycle fatigue, 120

**Microcrack density, 326****MITI (Japanese) code, 412****Mixed-mode fatigue, 345****Models**

fatigue damage assessment, 7  
 multiaxial stress-strain, 37

**Monte Carlo simulation, 183****Multiaxial**

creep-fatigue interaction, 107  
 damage observation, 326  
 fatigue

damage assessment, 7

high cycle, 120

hip prostheses, 429

inelastic stress strain predictions, 273

life prediction, 67

mean stress effect, 55

fatigue damage evaluation, 273

load-notch strain approximation, 375

loading, 244

low-cycle fatigue, 183, 326, 412

pressure vessel components, 412

stress-strain model, 37

test methods, 204

torsional fatigue behavior, 133

**Multiaxial stresses, 298****Multisurface stress-strain predictions, 273****N****Neutral loading, 273****Nonlinear strain hardening, 298****Nonproportional loading, 273****Normality flow rule, 273**

Notch strains, 375, 397  
 Numerical experiments, 259

**O**

Out-of-phase loading, 67, 133  
 Overstress, 107, 259  
 Oxidation, 183

**P**

Path dependence, 259  
 Peak stresses, 412  
 Plastic deformation, 55, 259  
 Plastic strain, 85, 259, 397  
 Plasticity, incremental, 298  
 Plasticity models, 290(table)  
 Polymeric composite materials, 429  
 Predictive models, 345  
 Pressure vessel codes, 412  
 Pressurized thin-walled cylinders, 359  
 Principal strain ratio, 55  
 Proportional loading, 37

**R**

Ratchet assessment diagrams, 298  
 Relaxation modulus, 397  
 Residual stresses, 375  
 Rhombic plate, 204

**S**

Schmid law, 244  
 Sequential tests, 183  
 Shear strain, 7, 223  
 Single crystal superalloys, 244  
 Slip lines/slip bands, 7, 244  
 Steel, high-strength, 345, 347(table)  
 Stainless steel  
     type 304, 107, 259, 298, 313  
     type 316, 183  
 Strain concentration factor, 412

Strain estimates  
     fatigue analyses, 273  
     gloss analysis, 397  
 Stress relaxation process, 397  
 Stress-strain  
     behavior, 2, overview, 7, 273  
     biaxial, 37  
     fatigue analyses, 273  
     mean stress effect on fatigue life, 55  
     model, 37  
     multiaxial fatigue life, 67, 273  
 Superalloy single crystal, 244, 245(table)

**T**

Temperature, elevated  
     fatigue behavior, 133  
 Tension-torsion loading, 244  
 Tension-torsion low-cycle fatigue, 326  
 Thermal fatigue, 107  
 Thermomechanical loading, 107  
 Thermomechanical testing, 223  
 Thermoviscoplasticity, 107  
 Thin cylinder failure, 359  
 Torsional loading, 223  
 Transition cycle, 85  
 Triaxiality factor, 85  
 Turbine blades—materials, 244  
 Two-surface stress strain predictions, 273

**U**

Uniaxial cyclic fatigue data, 67

**V**

Variable amplitude test, 37  
 Virtual strain energy, 67  
 Viscoplasticity, 259  
 von Mises yield surfaces, 273

**Z**

Z-parameter, 85
