

# Subject Index

## A

Acoustic emission studies of aluminum fatigue, 25  
 Aluminum alloys  
   fatigue, 25, 122  
   shot peening, 25  
 ASTM Standards  
   E 399: 108, 109  
   E 647: 111, 112  
 Autofrettage, 37, 54, 97, 107

## B

Bauschinger effect factor, 56  
 Bending stresses, 65  
 Boron steels, 82  
 Boundary integral equation method, 40, 71

## C

Cannon barrels, 54, 97 (*See also* Cylinders, thick walled; Pressure vessels; Tubing)  
 Crack arrest, 13  
 Crack closure, 82  
 Crack initiation and propagation  
   in autofrettaged tubing, 37  
   in a bending sample, 65  
   in quenched and tempered C-Mn-B steel, 82  
   radial, 54  
   in thick-walled cylinders, 54, 107  
 Cylinders, thick walled  
   autofrettage in, 37, 107  
   fatigue crack propagation in, 54, 107  
   fatigue life increased, 97

## E-F

Effective load ratio, 107  
 Fatigue (*See also* Stress effects)  
   of aluminum alloys, 25, 122  
   in a bending sample, 65  
   crack propagation in quenched and tempered C-Mn-B steel, 82

  crack propagation in thick-walled cylinders, 54, 107  
   life, 54, 97  
   of pressure vessels, 97  
   of shot-peened 403 stainless steel, 21  
   stress effects on, 122  
   of surface-processed steels, 1, 13, 21  
   tests, 13  
   of thick-walled cylinders, 54, 97, 107  
   threshold, 82  
 Fracture mechanics, 13, 37, 82, 107 (*See also* Crack initiation and propagation)

## H-L

Heat treatment of C-Mn-B steel, 82  
 Induction hardening, 1  
 K-factor, negative, 54  
 Life prediction, 1  
 Linear-elastic fracture mechanics, 37, 107  
 Load ratio, effective, 107

## M-O

Martensite, 82  
 Mining chain, 82  
 Overstrain, 97

## P

Predictive methods, 13, 65  
 Pressure vessels, fatigue life increased in, 97  
   (*See also* Cylinders, thick walled)  
 Prestress treatments  
   induction hardening, 1  
   shot peening  
     aluminum alloys, 25  
     steels, 1, 13, 21

## R-S

Rotating-bending tests, 21  
 Shape factors, 54

- Shot peening
    - aluminum alloys, 25
    - steels, 1, 13, 21
  - Steels (*See also* Cylinders, thick walled; Tubing)
    - boron, 82
    - C-Mn-B, quenched and tempered, 82
    - fatigue crack propagation in, 82, 107
    - induction hardening, 1
    - martensite, 82
    - shot-peening, 1, 13, 21
    - 403 stainless, 21
  - Strain analysis, local, 65
  - Stress distributions, 13, 97, 107
  - Stress effects (*See also* Fatigue; Stress intensity factor)
    - autofrettage, 37, 54, 97, 107
    - on fatigue crack growth in thick-walled cylinders, 107
    - on fatigue of surface-processed steels, 1
    - in quenched and tempered steel, 82
    - residual, 65, 97, 122
    - in shot-peened 403 stainless steel, 21
    - in welded aluminum in fatigue, 122
  - Stress intensity factor (*See also* Stress effects)
    - in autofrettaged tubing, 37
    - in a bending sample, 65
    - range, 107
    - in thick-walled cylinders, 54, 107
  - Stress profiles, 13, 97, 107
  - Stress relaxation
    - induction hardening, 1
    - shot peening
      - aluminum alloys, 25
      - steels, 1, 13, 21
  - Structural components, residual stresses in, 122
  - Superposition principle, 37, 107
  - Surface treatments
    - induction hardening, 1
    - shot peening
      - aluminum alloys, 25
      - steels, 1, 13, 21
- T**
- Temperature effects on shot-peened stainless steel, 21
  - Tubing (*See also* Cylinders, thick walled)
    - autofrettage, 37, 107
    - fatigue crack propagation in, 107
- W**
- Weight functions, 37
  - Welding of aluminum, 122
- X**
- X-ray diffraction studies
    - of aluminum, 25
    - of shot-peened stainless steel, 21
