Products

The declared unit of this EPD is 1 m³ of concrete formed into concrete masonry units (CMUs). These products are compliant to the following standards and specifications:

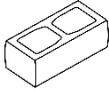

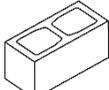

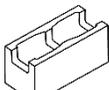

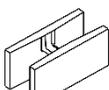

- **ASTM C90:** Loadbearing Concrete Masonry Units
- **CSI Specification Section 04 22 00:** Concrete Masonry Units
- **UNSPSC 30131502:** Concrete blocks

Each of the 69 products in this EPD is defined as one of 13 mixes manufactured at one of 7 plants, as described in Table 1 on the following page. The plant and mix abbreviations are used throughout this document to refer to individual products; for example, "NW1-TX" refers to the Normal weight 2000 net psi CMU produced at the Tuxford plant.

Study

The impact results declared in this EPD are based on a cradle-to-gate life cycle assessment (LCA) study covering the following phases of the life cycle:

- raw material acquisition;
- upstream transportation; and
- manufacturing processes.

A flow diagram illustrating the main unit processes by life cycle stage is provided below.

This EPD covers only the cradle-to-gate impacts of manufactured concrete and concrete masonry products using a declared unit, and the results cannot be used to compare between products. Only EPDs prepared from cradle-to-grave life cycle results and based on the same function and reference service life (RSL), quantified by the same functional unit, and meeting all the conditions in ISO 14025, Section 6.7.2 can be used to assist purchasers and users in making informed comparisons between products. EPDs from different programs (using different PCR) may not be comparable.

Declared Impacts

The product-specific impact results in Table 3 are declared per m³ of concrete formed into the 69 CMU products included in this EPD. Products are indicated using the plant and mix abbreviations from Table 1, and impacts are reported using the impact category abbreviations from Table 2.

Calculated impact results are relative expressions and do not predict impacts on category endpoints, the exceeding of thresholds, safety margins, or risks.

Health Hazard Assessment

Sawing or grinding of any CMU product may result in the release of dust particles. Acute exposure can cause minor irritation of the eyes or nose; chronic exposure can result in lung disease (silicosis) if exposed to excessive amounts for prolonged periods.

Preferred Waste Management Option

The organization has a robust take-back recycling program for concrete masonry products. It converts waste, recovered, and jobsite returned material to recycled aggregate for use in production of concrete masonry units and hardscape products. For this purpose, the incoming material is inspected for sustainability of reuse; production culls and spoiled inventory are identified as pre-consumer waste, and unused special order material and CMU waste from construction sites are identified as post-consumer waste.
