

# NATIONAL CEMENT COMPANY OF ALABAMA, INC.

**Ragland Plant** 

Environmental Product Declaration (EPD)

#### **ENVIRONMENTAL IMPACTS**

#### Ragland Plant:

Product-Specific Type III EPD **Declared Cement** 

## **Product:**

Type IL, Type GU, Masonry Type N, Masonry Type S

#### **Declared Unit:**

One metric Tonne of cement

#### **IMPACT CATEGORIES**

	1ype 1L	GU	Type N	Masonry Type S
Global Warming Potential, kg CO₂ eq	665	496	411	484
Ozone Depletion Potential, kg CFC-11 eq	3.62E-06	3.09E-06	2.93E-06	3.13E-06
Eutrophication Potential, kg N eq	1.71E-01	1.43E-01	1.31E-01	1.43E-01
Acidification Potential, kg SO2 eq	9.39E-01	7.27E-01	6.38E-01	7.31E-01
Photochemical Ozone Formation Potential, kg O₃eq	18.9	14.3	12.4	14.4
Abiotic Depletion, non-fossil, kg Sb eq	1.05E-05	8.21E-06	7.74E-06	8.60E-06
Abiotic Depletion, fossil, MJ, NCV	1,139	980	903	973

### GENERAL INFORMATION

This cradle-to-gate Environmental Product Declaration covers cement products produced at the Ragland Production Plant. The Life Cycle Assessment (LCA) was prepared in conformity with ISO 21930, ISO 14025, ISO 14040, and ISO 14044. This EPD is intended for business-to-business (B-to-B) audiences.

#### **MANUFACTURER**

NATIONAL CEMENT COMPANY OF ALABAMA, INC. Ragland Plant 80 National Cement Dr., Ragland, AL 35131

#### **PROGRAM OPERATOR**

EPD #: 1084, December 02, 2025, Valid for 5 years

ISO 21930:2017 Sustainability in Building Construction-Environmental Declaration of Building Products: serves as the core PCR

NSF PCR for Portland, Blended, Masonry, Mortar, and Plastic (Stucco) Cements V3.2 serves as the sub-category PCR

Sub-category PCR review was conducted by:

Thomas P. Gloria, PhD. • (t.gloria@industrial-ecology.com) • Industrial Ecology Consultants

Independent verification of the declaration, according to ISO 21930:2017 and ISO 14025:2006.:  $\Box$  internal  $\boxtimes$  external independent verification of the declaration, according to ISO 21930:2017 and ISO 14025:2006.:  $\Box$  internal  $\boxtimes$  external independent verification of the declaration, according to ISO 21930:2017 and ISO 14025:2006.:  $\Box$  internal  $\boxtimes$  external independent verification of the declaration of the

Third party verifier:

Thomas P. Gloria, PhD. • (t.gloria@industrial-ecology.com) • Industrial Ecology Consultants

For additional explanatory material:

Manufacture Representative:

Pascal Lamontagne • (<u>plamontagne@natcem.com</u>) • Director of Energy & Sustainability • National Cement Company of Alabama, Inc. (<u>www.nationalcement.com</u>)

This LCA EPD was prepared by:

 $\textbf{Melissa Diaz Segura} \bullet (\underline{melissa@climateearth.com}) \bullet \textbf{LCA} \ and \ \textbf{EPD Project Manager} \bullet \textbf{Climate Earth} \ (\underline{www.climateearth.com})$ 

EPDs are comparable only if they comply with ISO 21930 (2017), use the same, sub-category PCR where applicable, include all relevant information modules, and are based on equivalent scenarios with respect to the context of construction works.

# LIFE CYCLE ASSESSMENT

#### **PRODUCER**

National Cement Company of Alabama, Inc. (NCCA), a subsidiary of National Cement Company, Inc. (NCC), is an innovative and dynamic manufacturer of artificial cement and ready-mix concrete serving markets in Southeast United States. NCC is a proud, wholly-owned subsidiary of the Vicat Group based in France. Vicat is an international group of companies and a French, family-run business founded in 1817 by Louis Vicat who mastered the production of artificial cement during construction of the Souillac Bridge in southwestern France.

The Ragland plant has been in operation since 1908 with several iterations of technical abilities for cement production. Its latest, in 2022, with the investment in a new pyroprocessing line using state-of-the-art technology in emission control equipment with 100% capability of consuming alternative fuels in lieu of nobles fuels.

#### **PRODUCT**

The cement products covered in this EPD meet UN CPC 3744 classification and the following standards:

Product Type	Applicable Standard	Standard Designation			
Portland Limestone Cement	ASTM C595, C1157, AASHTO M240	Type IL, Type GU			
Masonry Cement	ASTM C91	Type N, Type S			

#### PRODUCT DESCRIPTION

This EPD reports environmental information for four cement products produced by NCCA at its Ragland, AL facility. These cements are used as the key ingredient in many products, such as ready-mix concrete, mortar, grout, masonry units, and in a wide array of applications such as concrete pipes, pre-stressed concrete, roads, foundations, bridges, soil stabilization, and more.

#### PRODUCT COMPONENTS

The cement products covered in this EPD meet UN CPC 3744 classification and the following standards:

Ingredients	Type IL	Type GU	Type N	Type S
Clinker	82.1%	59.9%	48.4%	58.2%
Limestone, Gypsum & others percent, %	17.9%	40.1%	51.6%	41.8%

#### **DECLARED UNIT**

The declared unit is one metric tonne of Type 1L, Type GU, Masonry Type N, and Masonry Type S cement.

#### SYSTEM BOUNDARY

This EPD is a cradle-to-gate EPD covering A1-A3 stages of the life cycle.

Р	RODUCTIO STAGE	N		RUCTION AGE		USE STAGE				END-OF-LIFE Stage					
Extraction and upstream production	Tansport to factory	Manufacturing	Transport to site	Installation	Use	Maintenance	Repair	Replacement	Refurbishment	Operational energy use	Operational eater use	Deconstruction / Demolition	Transport	Waste Procesing	Disposal of Waste
A1	A2	А3	<b>A</b> 4	<b>A</b> 5	B1	B2	В3	B4	B5	В6	В7	C1	C2	C3	C4
Х	Х	Х	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND

Note: MND = module not declared; X = module included.

#### **CUT-OFF**

Items excluded from system boundary include:

- production, manufacture and construction of manufacturing capital goods and infrastructure;
- production and manufacture of production equipment, delivery vehicles, and laboratory equipment;
- personnel-related activities (travel, furniture, and office supplies); and
- energy and water use related to company management and sales activities that may be located either within the factory site or at another location.

#### **ALLOCATION PROCEDURE**

Allocation follows the requirements and guidance of ISO 14044:2006, Clause 4.3.4; NSF PCR:2021; and ISO 21930:2017 section 7.2. Recycling and recycled content is modeled using the cut-off rule.

This sub-category PCR recognizes fly ash, silica fume, granulated blast furnace slag, cement kiln dust, flue gas desulfurization (FGD) gypsum, and post-consumer gypsum as recovered materials and thus the environmental impacts allocated to these materials are limited to the treatment and transportation required to use as a cement material input. Recycled and recovered materials with fuel content and used as fuels, such as scrap tires, residual wood chips and used oils, are considered nonrenewable or renewable secondary fuels. Impacts allocated to these fuels are limited to the treatment and transport required for their use from the point of generation along with all emissions from combustion.

#### LIFE CYCLE INVENTORY (LCI)

Primary Sources of LCI Data:

Diesel: US-EI (2021) "Diesel, combusted in industrial equipment/US"

Electricity: US-EI (2021) "Electricity, high voltage, at grid, eGrid (2021), SERC/US US-EI U"

Limestone: Manufacture specific primary data (2024)

Natural Gas: ecoinvent 3.8 (2021) "market for natural gas, high pressure US"

Truck transport: USLCI (2015) "Transport, combination truck, long-haul, diesel powered, Southeast/tkm/RNA" Truck transport: USLCI (2015) "Transport, combination truck, short-haul, diesel powered, Southeast/tkm/RNA"

Electricity grid mix includes: 45.83% Natural Gas, 3.21% Hydro, 20.64% Coal, 0.73% Wind, 24.36% Nuclear, 2.31% Solar, 0.0% Geothermal, 1.95% Biomass, 0.46% oil, 0.34% Other Fossil, with a global warming potential of 0.606 kg CO<sub>2</sub>eq/kWh.

# LIFE CYCLE IMPACT ASSESEMENT RESULTS - BULK PRODUCTS

Ragland Bulk Cement Products1: Type IL, Type GU, Masonry Type N, and Masonry Type S; per 1 metric tonne.

Impact Category and Inventory Indicators	Unit	Type IL	Type GU	Type N	Type S
Impact Assessment					
Global warming potential (GWP) <sup>2</sup>	kg CO₂ eq	665	496	411	484
Depletion potential of the stratospheric ozone layer (ODP)	kg CFC-11 eq	3.62E-06	3.09E-06	2.93E-06	3.13E-06

## ADDITIONAL ENVIRONMENTAL INFORMATION

To learn more about sustainability goals at National Cement Company of Alabama, Inc. please visit:

https://www.nationalcement.com/about-natcem/environment

NCCA is part of the Vicat Group, a global innovator of construction materials across 12 countries worldwide. The Vicat Group's sustainability initiatives include implementation of new, less energy-intensive organizational methods, integration of new technologies derived from its research and development projects and a focus on the use of new materials for the construction of housing and transportation infrastructures. Vicat is a member of the Natural Capital Accounting workshop of the Business and Biodiversity platform stemming from the European Union's Strategic Plan for Biodiversity 2011–2020. To learn more about the Vicat Group's sustainability initiatives, visit <a href="https://www.vicat.com/commitments/respecting-environment">https://www.vicat.com/commitments/respecting-environment</a>.
